Questions

Questions	Answers
We have a question with regards to stapler handle sizes - please refer to 29.2 as an example. For each Generation of Endoscopic staplers we have a 45mm Compact, Standard and Long handle (stapler). The same for 60mm. Can you please advise which size handle we should quote on in this bid?	We can use the standard handle for all. (Bid 29 specifically relates to power staplers – I have no experience with then. But the rest should be standard)
Item 28 is only requesting reloads. What about the handles that need to be used on these reloads. For example, item 29 requested both the handles and the reloads. Whereas item 28 only requests for reloads. Please explain.	Item 28.1 is the universal handle as described for laparoscopic procedures. All the subsequent reloads 28.2 – 28.10 should fit on this handle. Must be the same company to ensure compatibility
For item 27, are you looking for the linear cutter device(gun style handle) with articulating reloads or the linear cutter stapler device? I have attached the two possible types, please advise if it's option A or B.	Linear cutter stapler device
