<u>ltem</u>		Quantity	<u>Rate</u>	<u>Amount</u>
	SECTION 2			
	BILL NO. 1			
	EARTHWORKS (PROVISIONAL)			
	Note: For CPAP purposes workgroup 104 to apply			
	PREAMBLES			
	For preambles see Department of Health Standard Preambles to all Trades Rev 3 - January 2009			
	SUPPLEMENTARY PREAMBLES			
	Nature of ground			
	The nature of the ground is assumed to be loose sandy material, therefore "earth", but possibly interspersed with "soft rock" or "hard rock"			
	A soils investigation has been carried out on the site by the engineer and the report is annexed to these bills of quantities. The soils report indicates that the ground varies between dune sand, Berea formation sand and calyey sand, all of which will be deemed as "earth". All very hard unweathered shale, ironstone, etc, the removal of which necessitates the use of explosives or heavy duty hydraulic percussion hammers (peckers), will be classified as "hard rock"			
	All excavations exceeding 1.5m in depth are to be suitably shored during construction such that adjacent structures are not undermined and the excavation is safe for access by personnel and equipment			
	All excavations to be kept free of water at all times. Onsite storm water management is the responsibility of the Contractor during construction			
	Carried to Collection		R	
	Earthworks			

ı		I	I		
	Carting away of excavated material				
	Descriptions of carting away of excavated material shall be deemed to include loading excavated material onto trucks directly from the excavations or, alternatively, from stock piles situated on the building site				
	<u>Filling</u>				
	Notwithstanding the reference to prescribed multiple handling in clause 1 page 6 of the Standard System of Measuring Building Work, prices for filling and backfilling shall include for all selection and any necessary multiple handling of material				
	Testing				
	Prices for filling are to include for all necessary density tests in accordance with SABS 1200D				
	SURVEY				
\	Contractor to produce a contiguous piled wall "As-Built" survey		Item		
3	Contractor to produce a pile "As-Built" survey		Item		
	Provide the amount of R300 000-00 for land survey, to be used as directed by the architect and deducted in part or in whole if not required		Item		300 000.00
	TEMPORARY HOARDING				
	Provide 0,35 mm Thick suparoof IBR profile zincAL coated steel sheeting fixed to gumpoles at 1200mm centres. Gumpoles to be anchored into ground with and including 400 x 400mm concrete footing and removal of same all as directed by Engineer.	m	526		
	TEMPORARY FENCING				
	1800mm High temporary weldmesh fencing with 80% shade cloth fixed to posts bedded in 400 x 400 x 600mm deep concrete bases. Fence to be maintained for duration of contract and removed on completion	m	35

	SECTION NO. 2			
	BILL NO. 3			
	PILING			
	Note: For CPAP purposes workgroup 106 to apply			
	PREAMBLES			
	For preambles see Department of Health Standard Preambles to all Trades Rev 3 - January 2009			
	SUPPLEMENTARY PREAMBLES			
	Generally			
	All piling shall comply with SABS 1200F			
	Piling Methods			
	The grout shall be pumped through the stem of the auger and the rate of auger withdrawal be controlled so that a continuous monolithic shaft of full design is formed.			
	In filling the hole and socket with grout care must be taken to ensure that the column of the grout so formed is both uniform in cross-section and uncontaminated with regards to ground water and soil.			
	The sequence of installation of the piles must be such that adjacent piles are not in any way affected as regards their strength.			
	The cost of reporting or making good any damage to the supporting structures that occurs during the Defects Liabilty Period and is deemed by the Engineer to be a consequence of settlement of the piled foundations shall be recoverable from the Main Contractor.			
	Carried to Collection Bill 3 Piling		R	

Pile Reinforcement Reinforcement cover is not be less than 50mm. Spacer blocks shall be used to maintain the specific cover between the steel and the inside face of the wall of the pile hole. All reinforcement shall be designed to permit its placing to the depth specified through the grout of the pile at the completion of coating. The transverse reinforcement shall consist of helical bars. Longitudinal reinforcement shall be provided in continuous lengths without joints. Reinforcement shall be supported at such a level that it will provide the required protection above the cut-off level. The reinforcement should not project above the level of the working platform. **Grout** The cement used for grout manufacture must be fresh. Water used in the manufacture of the grout shall be free of sugars, algae, and have sulphates and chlorides less than 0.1 and 0.5% respectively. Water/cement ratio shall be between 0.50 and 0.60 to provide fluidity, strength and waterproofing to the reinforcement. Where admixtures are used to improve strength and fluidity, calcium chloride must not be less than 600kg/m3, and compressive strength of the sand/cement grout not less than 30mPa at 28 days. The slump of the grout mixes shall be such that the specified cube strength is achieved. The slump shall be 175mm or greater. Grout compressive strength tests must be carried out and one set three cubes must be made for every 10m³ of grout placed. Carried to Collection R Bill 3 Piling

	,	1	,
Testing			
Integrity testing:			
Frequency response integrity testing of an approved method is to be carried out on completed working piles as instructed by the Engineer.			
The Integrity test shall measure the response of the piles at the pile head, after trimming of the pile and prior to casting the pile cap, to an acoustic excitation with a band width of at least 2000 Hertz.			
The test result shall include a graphical or tabular representation of the acoustic response interpreted by a suitably experienced professional Engineer. The interpretation is to include professional Engineer's opinion of the physical integrity of the pile shaft.			
Load testing:			
The load test is to be completed within 28 days of installing the first pile.			
The test procedure shall be the British procedure.			
The working pile shall be tested to 1.5 times the design serviceability load.			
The piles to be tested will be selected on site by the Engineer.			
The test will require deflection measurement at two independent localities on the pile accurate to 0.1mm. The set up for the reading of these deflections is to be approved by the Engineer.			
Acceptance Criteria for the load test			
Maximum settlement at working after 24hrs of sustained load			
Maximum settlement at 150% of working load after 24hrs of sustained load			
Carried to Collection			
Bill 3	R

	Bill 3 Piling				
		İ	I	11	1

INDEMNITY The Contractor shall take full responsibility for piling work and shall guarantee that piling work will support the calculated loads laid down by the Consulting Structural Engineer, hereinafter referred to as the Engineer. The actual lengths of the piles shall be determined on site by the Contractor. The designed length together with calculations shall be made available to the Engineer prior to the commencement of the contract. This does not in any way relieve the Contractor of his responsibility or obligation to provide the specified guarantee The Contractor shall indemnify the Employer against any injury to or death of any person and all loss or damage to all structures resulting from the failure of any pile. In the event of the failure of any pile the Contractor shall make good such pile and all consequent damage at his own expense The Contractor shall furnish in a policy approved by the Engineer that insures against risks arising out of the responsibilities, guarantee and indemnities specified. The Contractor shall pay all premiums in respect of this insurance policy. The guarantee shall be effective for a period of three (3) years from the date of completion of the Contract **SCOPE OF WORK** The Contractor shall be responsible for and include for the design and supervision of the pile and for the provision of a Certificate of Stabilty all to the approval and satisfaction of the Structural/Civil Engineer. The design may be based on the appropriate goetechnical information and specified working loads herein. Geotechnical Information is attached. (Documents prepared by Drennan Maud) Note: Piles are to be installed subsequent to the site being excavated or filled to the correct levels Carried to Collection R Bill 3 Piling

INDEMNITY			
The Contractor shall take full responsibility for piling work and shall guarantee such piling work. The actual lengths of the piles shall be determined on site by the Contractor			
The Contractor shall indemnify the Employer against any injury to or death of any person and all loss or damage to all structures resulting from the failure of any pile. In the event of the failure of any pile the Contractor shall make good such pile and all consequent damage at his own expense			
The Contractor shall furnish in a policy approved by the Engineer that insures against risks arising out of the responsibilities, guarantee and indemnities specified. The Contractor shall pay all premiums in respect of this insurance policy. The guarantee shall be effective for a period of three (3) years from the date of completion of the Contract

	CONCRETE, FORMWORK AND REINFORCEMENT			
	Note: For CPAP purposes workgroup 110 to apply unless otherwise stated			
	PREAMBLES			
	For preambles see Department of Health Standard Preambles to all Trades Rev 3 - January 2009			
	SUPPLEMENTARY PREAMBLES			
	Cost of tests			
	The costs of making, storing and testing of concrete test cubes as required under clause 7 "Tests" of SABS 1200 G shall include the cost of providing cube moulds necessary for the purpose, for testing costs and for submitting reports on the tests to the architect. The testing shall be undertaken by an independent firm or institution nominated by the contractor to the approval of the architect. (Test cubes are measured separately)			
	<u>Formwork</u>			
	Formwork to sides of bases, pilecaps, ground beams, etc will only be measured where it is prescribed by the Engineer for design reasons. Formwork necessitated by irregularity or collapse of excavated faces will not be measured and the cost thereof shall be deemed to be included in the allowance for taking the risk of collapse of the sides of the excavations, provision for which is made in Earthworks

MASONRY			
Note: For CPAP purposes workgroup 116 to apply			
PREAMBLES			
For preambles see Department of Health Standard Preambles to all Trades Rev 3 - January 2009			
SUPPLEMENTARY PREAMBLES			
Sizes in descriptions			
Where sizes in descriptions are given in brick units, "one brick" shall represent the length and "half brick" the width of a brick			
Hollow walls			
Descriptions of hollow walls shall be deemed to include leaving every fifth perpend of the bottom course of the external skin open as a weep hole			
Bagged and sealed walls			
Walls in two skins described as "bagged and sealed" shall be deemed to include having the outer face of the inner skin bagged with 1:6 cement and sand mixture and sealed with two coats bitumen emulsion waterproofing coating			
Face bricks			
Bricks shall be ordered timeously to obtain uniformity in size and colour			
Carried to Collection		R	
Bill 5 Masonry

JOINERY FITTINGS GENERAL NOTES FOR TIMBER USED IN JOINERY Timber ·Hardwood for joinery must be clear grade furniture timber to comply with SABS 1099. ·Softwood for joinery must be clear grade sawn softwood industrial timber to comply with SABS 1783. ·Dimensions as specified are the exact finished sizes. Plywood and composite board ·Plyboard and composite board must comply with SABS 929. The exposure class, type, material, specie, number of plies or laminae and grade must be as specified. ·Laminated timber ·Laminated timber for joinery must be non-structural to comply with SABS 1460. The exposure class, appearance and finish, material, specie and adhesive type must be as specified. ·Fibreboard ·Woodfibre insulation board, fibreboard and hardboard must comply with SABS 540 and be of density and thickness, and whether coated or uncoated, as specified. ·Particle board ·Particle board for exterior and flooring use must comply with SABS 1300 and be of thickness and exposure class as specified. ·Particle board for interior use must comply with SABS 1301 and be of thickness and exposure class as specified. Carried to Collection R Carpentry And Joinery

GENERAL JOINERY NOTES			
Preparation			
·Shop drawings must be provided for all joinery work.			
discuss all aspects with the architect / principal agent before any work is put in hand.			
Provide a sample of every typical finished surface			
showing its final appearance and smoothness,			
including edge strips, stopping and dowelling, as specified. These samples must be kept on site for			
reference.			
·Provide the architect/principal agent with the			
opportunity to inspect the joinery before any priming or decoration is done.			
·Do not start any joinery before sizes have been			
checked on site.			
Carried to Collection	R		
Bill 8 Carpentry And Joinery			
		i /	

Joinery		
Produce joinery in humidity conditions which resemble		
those of the building site, in workshops equipped with		
modern machinery manned by skilled joiners.		
·Use joints that are not wholly dependent on adhesive		
and that conceal the end grain of natural wood		
or the edge of laminated or particle board.		
Round all angles and edges slightly. Pencil round all		
vulnerable or exposed angles and edges.		
Punch all exposed nail heads and fill with stopping that		
will match the wood after clear finish has been applied.		
·Countersink all exposed screw heads to 6 mm below		
the surface and glue in matching dowels.		
Countersink all other screws to 2 mm below surface		
and fill with stopping.		
·The grain of all fitted visible clear-finished timber, or		
the pattern of laminates when relevant, must run		
vertically on vertical surfaces and parallel to walls on		
horizontal surfaces, wherever practicable, unless		
specified otherwise. Veneer on any one fitting must		
match in grain and colour.		
·Knot and prime joinery one coat of primer, or brush		
apply one coat clear finish as specified under PAINTING,		
before delivery to site, as specified.		
·Timber door and window frames, sidelights, fanlights		
·Frames, subframes and glazing beads for door and		
window frames must be of profile, size and timber		
specie as specified.		
Join frames with mortise and tenon joints.		
Frames must be shaped out of solid wood. Do not lay		
on door or casement stops.		
·Top rails of frames must be provided with bevelled		
haunches for building in.		
·Glazing beads must be tacked lightly in place.		
·Galvanised steel lugs for building in must be screwed to		
the outside of frames.		
·Bottom ends of door frame stiles must be provided		
with one 10 mm diameter steel dowel for building into		
thresholds.		
·Head and bottom rails of windows and sidelights must		
be provided with a drip.		
Paint backs of sub frames one coat wood primer before		
building in.

Bill 8		\vdash
Carpentry And Joinery		

 Hardwood tops Solid hardwood tops must be glued together in wide boards with tongued and grooved joints stopping 25 mm from visible ends. Boards must be in single lengths or, if this is not possible, with staggered end joints. Tops must be screwed to framework with rebated hardwood clamps or metal cleats at 300 mm centres, screwed from underneath. Hardboard backs Fittings must be provided with hardwood backs when, and of thickness as specified. Bevel hardboard backs all round. 		
Drawers Drawers must be made with a 19 mm hardwood front, 12 mm softwood sides and back and 6 mm tempered hardboard bottom, all rebated, grooved, dovetailed and glued together. Sides must be fitted with two 19 x 19 mm hardwood runners, screwed on with brass countersunk screws, to take hardwood guide similarly screwed to fitting side. Runners and guides must be waxed with candle wax. Commercial runners are acceptable.		
Shelf bands Screw and plug metal shelf bands to walls. Bolt the top hole of each band with a 6 mm diameter expansion bolt or frame fixing anchor. Start first band mm away from corners of rooms or from other shelves which are at right angles.		
Fixing to walls ·Fix joinery to masonry or concrete with appropriate plugs and screws, expanding bolts or frame fixing anchors. Do not use shot nails. ·Provide the necessary blocking pieces and sub frames to take up inaccuracies of wall and floor faces.		
Carried to Collection	R	L
Bill 8 Carpentry And Joinery		

DECORATIVE LAMINATES Material Decorative laminates must comply with SABS 1405. ·Plywood and composite board must comply with SABS 929 ·Fibreboard must comply with SABS 540 ·Particleboard must comply with SABS 1300 Construction Decorative laminate construction must be as follows, or as specified: High-wear worktops, doors, drawers and vertical surfaces must have: ·a substrate of high density particleboard or medium density fibreboard for dry areas, or a water resistant grade particleboard grade 1 for wet areas, and to thicknesses as specified. ·a laminate of 1,2mm high-pressure general purpose quality, and/or 0,8 mm high-pressure postforming quality decorative laminate to colour and finish as specified. The reverse face of the substrate must be 0,8mm backer quality laminate ·approved synthetic resin type adhesive for dry areas, or an approved water resistant type adhesive for wet areas ·post-formed edges, splashbacks and downstands to profile as specified, post-formed under factory conditions with no joints, and fabricated from the same substrate material. Low wear horizontal surfaces, door and drawer fronts, and vertical surfaces and shelving must have: ·a substrate of high density particleboard class 3 or medium density fibreboard, and to thickness as specified. ·a laminate of 0,55mm high-pressure light duty quality decorative laminate to colour and finish as specified. ·self-edged exposed edges with 0,35mm matching laminate. Carried to Collection R Carpentry And Joinery

GENERAL NOTES FOR WOOD KITCHEN		
CUPBOARDS		
Cupboards ·Wood kitchen cupboards must comply with SABS 1385, with type of stainless steel for sinks and/or drainboards, material of worktops, edging of worktops, locks, finish and colour as specified. ·Supply a sample of a cupboard unit with door, drawer, handles and lock for approval, as specified. ·The supplier is responsible for checking the sizes on site and for providing detail layout drawings for approval before any work is started.		
Fixing ·Securely fix cupboards in position according to the manufacturer's instructions. ·Seal all joints between work tops and walls with an approved fungus-resistant sealant. ·Adjusting ·Inspect all cupboard components after fixing and leave everything in perfect working order. ·Protect cupboards from damage.		
CUPBOARDS, COUNTERS, SHELVING, ETC		
<u>General</u>		
All work according to Departmental Specification PW371		
The following cupboard fittings, etc have been measured as complete units i.e. the components of the units have not been separately measured. The descriptions, therefore, of such units shall be deemed to include all components, assembling, housing, notching, glueing, blocking, planting on and screwing with countersunk screws, edge strips, decorative plastic finish, glass, ironmongery, metalwork, paint or varnish finishes, etc

	PREAMBLES			
	For preambles see Department of Health Standard Preambles to all Trades Rev 3 - January 2009			
	SUPPLEMENTARY PREAMBLES			
	<u>Fixing</u>			
	Items described as "nailed" shall be deemed to be fixed with hardened steel nails or pins, or to be shot-pinned, to brickwork or concrete			
	Items described as "plugged" shall be deemed to include screwing to fibre, plastic or metal plugs at not exceeding 500mm centres, and where described as "bolted", the bolts have been given elsewhere			
	<u>Ceilings</u>			
	Unless otherwise described ceilings shall be deemed to be horizontal			
	Bulkheads			
	Bulkheads are defined as those portions of ceilings which are stepped down from the general ceiling level in a particular room or area and which generally occur along the perimeter. Their purpose is either to conceal services or to create architectural features			
			_	
	Carried to Collection Bill 10 Ceilings, Partitions And Access Flooring		R	

Bulkheads have only been described as such where they conform to the above definition and where the horizontal or vertical dimensions do not exceed 900mm. Where these dimensions are more than 900mm such portions of ceilings have been included in the appropriate general items of ceilings Unless otherwise described bulkheads shall be deemed to be horizontal along the length		
Steel components		
All steel components for ceilings, partitions, etc are to		
be galvanised in accordance with SANS 121		
SUSPENDED CEILINGS		
Proprietary suspended ceilings		
Ceilings and support framework are to comply with Part T of the national building regulations with tiles in compliance with Surface Fire Index Test: SANS 10777 Part 3 Class 1 and SANS 428 overall classification Class B/B1/2		
Only non-combustible ceilings and insulation allowed (Class A/A1)		
Hangers for suspended ceilings are to be 19mm wide by 0,5mm thick galvanised strapping, strapped and secured to tie beams by means of 32mm grabber screws or fixed to concrete soffits by means of 6 x 30mm express nails and washers. All tee sections and wall trimmings to be of galvanised metal, powder coated to specified colour. Grid Tee system to consist of 38 x 24 x 0,35mm Firerated Main and Cross tees. Main tee suspended at 1200mm centres and Cross tees to be fitted at 600mm centres, at right angles to main tees. Room perimeter to be finished with 20 20 x 20 x 0,5mm Shadowline Wall Trim fixed to wall by means of wall anchors at 450mm centres		
Carried to Collection	R	\vdash
Bill 10		
Ceilings, Partitions And Access Flooring		

,	Support Tee section for light fittings to be secured at diagonal corners of fitting to roofing member or concrete soffits				
	Fittings to ceilings or hospital curtain track hangers are to be secured through suspended ceiling grid system and supported from roof truss tie beams or concrete slab all to manufacturer's instructions				
	Note:				
	Electrical light fittings, diffusers, panels, etc generally are "lay in" units of the same dimensions as the suspension grid described and allowance must be made accordingly for their support inclusive of any flexibility insetting out that may be required (ceiling panels have not been deducted and pricing is to take cognisance thereof)				
	1200 x 600mm Ceiling tiles of Calcium Silicate vinyl with square edges and pre-painted white laid on exposed tee grid system with main tees suspended with 2.5mm galvanised wire at 1200mm centres and cross tees at 600mm centres at right angles to main tees. Ceilings installed by approved specialist and in accordance with manufacturer's recommendations				
Α	Ceiling suspended not exceeding 1m below trusses/concrete slab	m2	2 924		
	9mm Flush Jumbo plasterboard ceiling suspended flush at 45 degrees with and including 3600mm Jumbo main tees at 1200mm centres in one direction and 1200mm (9mm) Jumbo cross tees at 400mm centres perpendicular to main tees. Main tees to be suspended at 1200mm centres by means of 25 x 25 x 0.6mm galvanised steel angle, hangers fixed to bulb of main tee with wafer tek screws/steel pop rivets and to slab with 6 x 30mm express nails and washers. Plasterboard fitted to the underside of grid system with tapered edge of board facing down with 25mm drywall screws at 150mm centres. Apply 50mm JUMBO tape to all joints and finished with and including 3-5mm JUMBO Skimming Plaster				
В	Raking ceiling suspended flush not exceeding 1m below trusses/concrete slab	m2	309		
	Carried to Collection Bill 10 Ceilings, Partitions And Access Flooring			R	

	12mm Jumbo plasterboard secured to form bulkhead and including 51mm general mild steel track and stud framing. Tapered edge of board				
	facing outwards with 25mm drywall screws at 150mm centres. Apply 50mm JUMBO tape to all joints and finish the entire bulkhead with 3-5mm JUMBO Skimming Plaster				
С	Bulkhead 1050mm wide and 500mm deep	m	8		
	CORNICES, TRIMS, ETC				
D	Shadowline wall trim	m	2 650		
	INSULATION				
	1220mm wide x 60mm Laminated polyisocyanurate insulation core board (PIR) with minimum core density of 34kg/m3. Upper facing to be natural matt mineral-coated fibreglass tissue; lower facing to be white matt mineral-coated fibreglass tissue, laminated on both sides				
Е	Insulation fixed concurrent with roof covering and fitted over purlins with galvanised straining wires at 300mm centres	m2	1 481		
	PARTITIONS ETC				
	Pelican Systems or equal and approved JUMBO AcousticWall 63/120/S50 with overall thickness of 124mm with 63mm JUMBO studs at 600mm centres friction fitted into head track and floor track with 63mm thick JUMBO Sound Therm in cavity pf partition, and clad on both sides with a double layer of 15mm thick fire resistant JUMBO plasterboard fixed at 220mm centres using 25mm drywall screws on the base layer and 41mm drywall screws on the face layer, all plasterboard joints to overlap. All exterior joints to be covered with JUMBO fibre tape and finished with two layers of JUMBO jointing plaster applied and lightly sanded down, leaving wall surface prepared for painting (painting elsewhere measured) all in accordance with the supplier's recommendations

	Bill 13 Metalwork				

POWDER COATED ALUMINIUM WINDOWS, DOORS, SHOPFRONTS, ETC.		
The sizes indicated on the drawings are unfinished brickwork openings. The window manufacturer is required to measure and check all openings prior to fabrication of the windows.		
Shop drawings and samples are to be submitted for approval by the Architect prior to manufacture. The drawings are to be comprehensively detailed showing all sections with sizes, gaskets, wet seals, fixings, etc which are all to be identified on the drawings together with the product identification.		
All aluminium windows are to be protected after manufacture by removable PVC tape or other approved application. The protection is to be removed only when authorised by the Architect. Any component damaged in any way prior to the completion of the building is to be replaced with new. "Touching up" of decorative finishes will not be permitted.		
Glass shall be free from flaws, specks, scratches, bubbles and any other defects and shall be cleaned down upon completion. Broken glass shall be replaced at the Contractor's expense.		
Every window and all ironmongery is to be tested upon completion of the Contract, adjusted where necessary and left in perfect working order.		
Carried to Collection Bill 13	R	
Metalwork		

Prior to commencement of any work on site, the		
following certificates are to be provided and handed		
over to the Architect :		
over to the Architect.		
Constitution of AAAAAGA on formation of Property		
·Copy of the relevant AAAMSA performance certificate		
from the Manufacturer / Contractor supplying the		
architectural aluminium product		
·A certificate of conformance certifying that all		
anodising or powder coating has been processed in		
strict accordance with SANS 999:2007 and SANS		
1796/2001, respectively		
·A powder guarantee of no less than 15 years issued by		
the powder manufacturer. The specific conditions		
contained in this guarantee shall form part of the		
process and may only be applied by an approved		
powder applicator		
·A certificate of conformance that the glazing has been		
installed in accordance with the NBR Part N, SANS		
10137:2000 Code of Practice : "The Installation of		
Glazing in Buildings", SANS 10400-Part N:2006, SANS		
1263-1:2006 and AAAMSA Selection Guide for Safety		
Glazing Materials, ensuring that safety glazing materials		
have been installed in the mandatory areas and that		
·		
each individual pane of safety glazing material has been		
permanently marked.		
·A warranty from the Manufacturer of the laminated		
safety glass and / or hermetically sealed glazing units,		
warranting the products against de-lamination and		
colour degradation for a period of not less than 5 years		
Frames to receive glazing to comply with SANS 0137,		
SANS 1263 & SANS 0400. All aluminium to be 25 micron		
anodised finish all as per SANS 999 & SANS 1407		
AAAMSA test certificate A2 and SAGGA Certificate of		
Conformance to be provided for all aluminium work		
installed		
Windows and curtain walls requiring ironmongery, this		
shall be included in the price and to be standard		
ironmongery as per manufacturer's specification

Testing of sand/cement screeds				
Testing to be done by an accredited independent testing specialist, or by the provision of independently certified test data to demonstrate compliance with the specification as set out below				
Testing to include both light tap and heavy weight impact using a 4kg mass in compliance with the BRE screed tester requirements. Maximum indentation not to exceed 3mm				
Alternative substrate testing methods may be put forward for consideration and acceptance by the Principal Agent. All test results to be provided in Microsoft Excel format with unique numbers and the positions of tests referenced and indicated on a floor plan (floor plan to be provided by Principal Agent) In all instances of results failing to comply as determined by the Principal Agent, addition tests to prove final compliance will be for the account of the contractor				
Carry out impact tests to establish the soundness of all screeded substrate (total floor area / 4)		Item		
Allow for a test mix and sending to an approved Laboratory for screed mix and 2 x 2m sample panels		Item

	For preambles see Department of Health Standard Preambles to all Trades Rev 3 - January 2009			
	SUPPLEMENTARY PREAMBLES			
	Wire gratings			
	Descriptions of gutter outlets etc shall be deemed to include wire balloon gratings			
	Stormwater channels			
	Descriptions of channels shall be deemed to include necessary excavation, surface preparation, compaction, etc, and disposal of surplus material on site			
	Stainless steel basins, sinks, wash troughs, urinals, etc			
	Stainless steel for economy basins, domestic sinks and worktops shall be Type 430 (17/0)			
	Stainless steel for urinals, basins, quality sinks, wash troughs, institutional equipment, etc shall be Type 304 (18/8)			
	Stainless steel for laboratory sinks, photographic equipment, etc shall be Type 316 (18/8)			
	Units shall have standard aprons on all exposed edges and tiling keys against walls where applicable			
	Carried to Collection		R	
	Bill 16 Plumbing and Drainage			

Sealing of edges	1]	1	1
Outer edges of sinks, basins, baths, urinals, etc are to be sealed against adjacent surfaces with approved silicone				
uPVC pipes and fittings				
Sewer and drainage pipes and fittings shall be jointed and sealed with butyl rubber rings				
Soil, waste and vent pipes and fittings shall be solvent weld jointed or sealed with butyl rubber rings				
uPVC pressure pipes and fittings				
Pipes of 50mm diameter and smaller shall be plain ended with solvent welded uPVC loose sockets and fittings				
Pipes of 63mm diameter and greater shall have sockets and spigots with push-in type integral rubber ring joints. Bends shall be uPVC and all other fittings shall be cast iron, all with similar push-in type joints				
High density polyethylene (HDPe) pipes and fittings				
Pipes shall be type IV and of the class specified with "Plasson" or "Alprene" compression fittings				
Copper pipes				
Pipes shall be hard drawn and half-hard "Maksal" pipes of the class described. Class 0 (thin walled hard drawn) pipes shall not be bent. Class 1 (thin walled half-hard), Class 2 (half-hard) and Class 3 (heavy walled half-hard) pipes shall only be bent with benders with inner and outer formers. Fittings to copper waste, vent and antisyphon pipes, capillary solder fittings and compression fittings shall be "Cobra Watertech" type. Capillary solder fittings shall comply with ISO 2016				
Carried to Collection		R		
Bill 16 Plumbing and Drainage				

Copper pipes are to be installed in accordance with the latest revision of the Code of Practice for Copper Plumbing soldering techniques. Flux, solder, etc to be strictly in accordance with the manufacturer's requirements with special attention to copper flux composition		
Reducing fittings		
Where fittings have reducing ends or branches they are described as "reducing" and only the largest end or branch size is given. Should the contractor wish to use other fittings and bushes or reducers he may do so on the understanding that no claim in this regard will be entertained		
Fixing of pipes		
Pipe supports shall be provided with rubber inserts		
Pipe supports in basement shall be stainless steel (including straps, hanger, rods, bolts, nuts and screws)		
Paper wrapping to pipes		
Pipes chased into brickwork must be wrapped with two layers of stout brown paper tied with wire. Rates are to include for wrapping around joints and fittings		
Disinfection of water pipework		
Water pipework is to be disinfected at completion in accordance with SABS 1200L (provision for disinfection elsewhere)		
		\vdash
Carried to Collection Bill 16	R	\vdash
Plumbing and Drainage		

"Densyl" petrolatum anti-corrosion tape as		
manufactured by Denso SA (Pty) Ltd.		
Pipes to be taped shall be coated with the appropriate primer and the tape shall be applied in the appropriate widths and with overlaps		
Couplings and fittings to pipes shall be taped in strict accordance with the manufacturer's instructions including mastic, tape, "Layflat" sheeting, securing of same, etc		
Prices for wrapping of pipes shall include for all work as described to couplings in the length		
Laying, backfilling, bedding, etc of pipes		
Pipes shall be laid and bedded in accordance with manufacturers' instructions and trenches shall be carefully backfilled		
Where no manufacturers' instructions exist, pipes shall be laid in accordance with Clauses 5.1 and 5.2 of each of the following: SABS 1200L : Medium-pressure pipelines		
SABS 1200LD : Sewers SABS 1200LE : Stormwater drainage		
Pipe trenches, etc shall be backfilled in accordance with Clauses 3, 5.5, 5.6, 5.7 and 7 of SABS 1200DB: Earthworks (Pipe trenches)		
Pipes shall be bedded in accordance with Clauses 3.1 to 3.4.1, 5.1 to 5.3 and 7 of SABS 1200LB : Bedding (Pipes)		
Unless otherwise described bedding of rigid pipes shall be Class B bedding		
Carried to Collection	R	
Bill 16 Plumbing and Drainage		

<u>General</u>	
Descriptions of cast iron roof outlets shall be deemed to include joints to pipes and casting into concrete (adaptors for joints to PVC pipes, etc are given separately)	
Descriptions of overflow pipes where measured in number, shall be deemed to include joints to cisterns and splay cut ends	
Descriptions of pipes laid in and including trenches and of inspection chambers, catchpits, etc shall be deemed to include excavation, bedding, backfilling, compaction to a minimum of 90% Mod AASHTO density and disposal of surplus material on site	
Descriptions of service pipes and flexible connecting pipes shall be deemed to include connections to taps, cisterns, etc and to steel pipes (adaptors for connections to copper pipes, etc are given separately)	
Descriptions of WC pans, slop hoppers, etc shall be deemed to include for joints to soil pipes (pan connectors are separately measured)	
As-built drawings	
Where required, the contractor shall prepare an updated set of as-built drawings. At completion of the contract the contractor shall hand these drawings to the principal agent for reproducing onto the originals for handing over to the employer (provision for allowance of as-built drawings elsewhere)

	"Franke" or similar approved, stainless steel				
Y	316mm x 425mm x 241mm Model SBE back entry inlet barron bowl urinal with and including 40mm waste outlet with a pressed perforated stainless steel grid and a chrome plated button spreader with a 15mm thick mounted plate with two key hole slots for mounting the unit to the wall with and including fixing bolts (code 2540055)				
		No	3		
Z	360mm x 700mm x 350mm HDTX594 Wall-mounted vandal proof WC pan with a shroud with corner mounting gussets and 10mm nuts to be supplied with and including galvanised mild steel threaded roads for securing the pan through the wall. Compliant with SABS 1733:1998 and SABS 497:1991 WC pan to flush with 4 and 6 litres of water. Pan to withstand point load of 400kg as per international standards code 356116				
	loong as per international standards code 555226	No	8		
AA	360mm x 550mm x 350mm CMPX592 Wall-mounted vandal proof WC pan with a shroud with corner mounting gussets and 10mm nuts and to be supplied with and including galvanised mild steel threaded roads for securing the pan through the wall. Compliant with SABS 1733:1998 and SABS 497:1991 WC pan to flush with 4 and 6 litres of water. Pan to withstand point load of 400kg as per international standards code 356109	No	17		
AB	360mm x 550mm x 410mm HDTX597 Wall & floor mounted vandal proof WC pan with a pressed flushing rim and integral "P" trap with a 102mm outlet pipe and a 60mm back entry inlet pipe to suit a rubber flush inlet sealing bung. Unit to include a shroud, with internal flanges for securing the pan through the wall and into the floor with anchor bolts. Compliant with SABS 1733:1998 and SABS 497:1991 WC pan to flush with4 and 6 litres of water. Pan to withstand point load of 400kg as per international standards code 356082	No	2
