## **1. PURPOSE**

- 1.1. To appoint a service provider to conduct a feasibility study on installations of storm water harvesting systems to prevent flooding and to capture storm water in urban areas of uMzinyathi District Municipality over a twelve (12) month period.

## **2. INTRODUCTION AND BACKGROUND**

- 2.1. The South African Department of Forestry Fisheries and the Environment (DFFE) in partnership with the Government of Flanders has developed the “Department of Forestry, Fisheries and the Environment Adaptive Capacity Facility” (DFFE-ACF or ACF). The key challenge the ACF aims to address is the lack of effective climate change implementation at a local level in South Africa.
- 2.2. The facility intended to benefit those citizens and communities of South Africa that are most vulnerable to climate change impacts because of their exposure to various impacts and their lack of capacity to adapt to these impacts. These vulnerable groups are most reliant on effective institutional adaptation measures that can reduce their exposure to the impacts of climate change and increase their adaptive capacity to respond to climate change more effectively
- 2.3. The uMzinyathi District Municipality (UDM) is recognized as one of the most vulnerable communities to climate change. It is vulnerable to the impacts of climate change as seen from increased flood events in the region which has led to several fatalities and destruction of infrastructure in the district. Furthermore, such impacts either directly or indirectly increase the poverty rates as infrastructure is lost and local economic development is affected by these climate risks
- 2.4. The District has in the past experienced severe intense rainfall. Additionally, high temperatures have also been felt and intense rainfall with high volumes in a short amount of time has resulted in floods with fatalities reported. These impacts are exacerbated by climate change and affects the vulnerable communities as floods have led to loss of lives in Endumeni Local Municipality (ELM), with several others in Msinga Local Municipality (MLM) which have not been found even to this day. UMzinyathi District Municipality (UDM) risk profile, based on reported incidents show an increase in frequency of floods i.e., cases have increased. Therefore, installation of stormwater harvesting systems can be a beneficial project. Stormwater harvesting (SWH) is “the collection and storage of runoff from an urban area, and the subsequent redistribution for use by one or more independent users for any appropriate purpose” (Fisher-Jeffes, 2015).
- 2.5. It is generally the collection, storage and use of runoff from urban surfaces (e.g. roads, drains) that would otherwise drain to a water body. SWH systems are believed to reduce peak flows, lessen runoff volumes and thus mitigating flood risk. Purposes for the harvested water include; garden irrigation, toilet flushing, parks irrigation and/or car washing. Furthermore, the harvested water can be used by the UDMs firefighting unit. Therefore, there is a need to investigate the feasibility of SWH within the district in order to mitigate flooding within urban areas of the district.

### **3. OBJECTIVES**

- 3.1. The assignment involves achieving the following objectives:
  - 3.1.1. To conduct a baseline study to determine feasibility of storm water harvesting systems in the District Municipality.
  - 3.1.2. To investigate storm water harvesting systems technology suitable to be installed and operated in the UDM.
  - 3.1.3. Develop of a project concept note with full costing after concept has been agreed to

### **4. SCOPE AND EXTENT OF WORK**

- 4.1. The project requires the consultancy services for conducting a feasibility study on installations of storm water harvesting systems within the UDM to minimize flood risk and capture water
- 4.2. The project is District wide, covering all urban/built-up areas prone to flooding
- 4.3. The project aims to investigate the feasibility of storm water harvesting (SWH) at a District level.
- 4.4. This should lead to the development of a business/implementation plan for a large infrastructure project that can then be used as a basis for sourcing additional funding.
- 4.5. When conducting the study, two (2) undergraduates from the district should be employed.
- 4.6. Depending on the results of the study, installation/construction of storm water catchers will be the next phase of the project which is outside of the scope of this assignment.

### **5. EXPECTED DELIVERABLES / OUTCOMES**

- 5.1. Baseline study report compiling a report for the baseline study conducted to determine feasibility of installing storm water harvesting systems in the District Municipality
  - 5.1.1. Conducted a number of studies across the district (e.g.) physical and environmental factors, climate change projections relating to precipitation and flooding technology overview/stock take).
  - 5.1.2. Clearly provide all aspects of installing storm water catches within the district.
  - 5.1.3. Clearly provide potential problems that could occur while implementing the project.
  - 5.1.4. Clearly determine whether after considering all significant factors whether the project is economically viable i.e., worth undertaking.
  - 5.1.5. Investigate how similar SWH systems in other parts of South Africa have been implemented.

- 5.2. Business plan/concept note for the entire urban areas of the District Development of a business plan/concept after stakeholder-driven engagement process
- 5.2.1. Provide a project concept note with full costing after concept has been agreed to
- 5.2.2. The service provider must undertake to engage all relevant stakeholders within the DM and all flood affected communities. Other relevant stakeholders include Municipal officials from technical service planning waste management, environmental services, including one ward committee member from the affected areas
- 5.2.3. Service provider is required to develop and implement an engagement plan for stakeholder engagement
- 5.2.4. Two workshops one combining Nquthu and Endumeni and one combining uMvoti and uMsinga catering will be required as it is envisioned to be an exercise i.e., Morning tea, lunch, and afternoon tea. The service provider is expected to find the appropriate venue
