49. Beading Needles 18 Beading needles do not follow an industry-wide universal metric system, but standard beading sizes are measured by gauge, where a higher number corresponds to a thinner needle. In "size 18" beadwork, this typically refers to 18/0 seed beads and requires an ultrafine Size 15 or 16 beading needle. Review the specifications required for navigating these exceptionally tiny 18/0 seed beads: Beading Needle Specifications for Size 18 • Needle Size: Size 15 or 16. • Needle Diameter: ~0.30 mm to 0.41 mm (Size 15) up to extremely fine 0.20 mm (Size 16). • Compatible Bead Size: Size 22/0 through 24/0 (includes 18/0 seed beads). • Compatible Thread: Use extremely thin beading threads (Size A or 0.006 monofilament) or thin cord (such as Fire Line 2 lb or Nymo B) to ensure the thread and doubled-pass loops fit through the bead. Materials: Usually made of tempered stainless steel or high-tensile wire for flexibility without breaking.	20

2. Genuine leather The term "Genuine Leather" is a descriptive, not a qualitative, label. It means the item is made from real animal hide, but it typically refers to a "split-grain" or lower-tier layer that has been sanded, buffed, and coated to resemble higher-quality hides. Standard specifications: Material: Sourced from real animal hide, predominantly bovine (cow or buffalo). • Layer Source: Derived from the lower layers of the hide that remain after the top, stronger layers (Full-Grain or Top-Grain) have been split off. • Surface Finish: Since the natural top grain is gone, the surface is usually buffed, heavily treated, painted, or embossed with an artificial grain pattern to give it a uniform appearance. Durability: While reasonably durable for general use, it is less breathable, softer, and has less structural integrity compared to top-hide leathers. It is also more prone to peeling or cracking over time rather than naturally aging or developing a patina.	20

Standard specifications: • Material: Sourced from real animal hide, predominantly bovine (cow or buffalo). • Layer Source: Derived from the lower layers of the hide that remain after the top, stronger layers (Full-Grain or Top-Grain) have been split off. • Surface Finish: Since the natural top grain is gone, the surface is usually buffed, heavily treated, painted, or embossed with an artificial grain pattern to give it a uniform appearance. Durability: While reasonably durable for general use, it is less breathable, softer, and has less structural integrity compared to top-hide	50

leathers. It is also more prone to peeling or cracking over time rather than naturally aging or developing a patina.	
4. Upholstery thread all colors Upholstery thread differs significantly from standard, all-purpose sewing thread. It is engineered to withstand higher tension, friction, and wear, making it ideal for heavy-duty furniture, leather, and marine canvas.
