1. SCOPE OF WORK

1.1. DESCRIPTION

As part of its monitoring programme, Rand Water VG is on a monthly basis conducting monitoring of ground and surface water (Storm water and borehole). This is done to establish whether Vereeniging station is impacting on or causing pollution to the environment. Throughout this monitoring process, it has been observed that in most months there are exceedances of certain parameters in some storm water and borehole results.

Therefore, to address the exceedances in some parameters and ensure compliance with National Environmental Management Act 107 of 1998, National Water act 36 1998 and other applicable Legislation/Regulation, Rand Water VG is seeking the appointing of the suitable competent service provider(s) (Geo-hydrologist/Environmentalist or any other related qualification) to conduct the investigation on the parameters that have exceeded the required/recommended limit (water quality guidelines) from the Surface and Underground Water Monitoring (Boreholes)

The scope of work shall include:

Determine the sources of the elevated parameters in the surface and groundwater monitoring (Boreholes)

Taking sample, analyse and submit report with reason why other parameters are out of the recommended limit.

Sample should be taken only for boreholes, not storm water.

Seven (7) boreholes are to be sampled. Four (4) of the boreholes are located inside the Rand Water Vereeniging Premises, other Three (3) are outside the premises about 800 meters away.

Service provider is expected to conduct monitoring for 5 (Five) consecutive months on 7 (Seven) boreholes.

The number of Samples to be taken should be 5 per borehole for each sampling event.

One borehole should be sampled 5 times to allow for the adequate volume for analysis. Meaning for a month, it will be 7x5 samples giving us a total of 35 samples in a month.

The average depth of each borehole is about 30 meters, and the diameter is about 15cm.

The parameters to be analyzed are as follows:

pH, Conductivity EC, Calcium Ca, Magnesium Mg, Sodium Na, Potassium K, Chloride Cl, Sulphate SO₄, Aluminum Al, Iron Fe, Manganese Mn, Nitrate NO₃, Ammonia NH₄, Ortho-phosphate PO₄, Boron B, Cadmium Cd, Cobalt Co, Chromium Cr, Copper Cu, Molybdenum Mo, Nickel Ni, Lead Pb, Vanadium V, Zinc Zn, Fluoride F, Total Silica, Odour, Alkalinity, Chemical Oxygen Demand (COD (mg/l)), Total Hardness, Oil and Grease, Total Dissolved Solids, Suspended Solids, Oils & Grease

Analysis shall be done at a SANAS accredited Lab, and proof of accreditation shall be provided.

Advise if Rand Water's activities and process are contributing towards the exceedances of those parameters.

Advise what might be the cause of the exceedance from those parameters.

Determine what parameters should be analysed or included in the monitoring programme.

Advise if the current sampling locations/points are sufficient.

The investigation shall be carried out by competent Geo-hydrologist or personnel with any other related qualification.

Proof of training/Qualification (certificate for a degree or diploma in Hydrology/Environmental Science etc.) for the investigators should also be provided before commencing with the investigation.

Proof of similar work done somewhere must be submitted.

The report shall include calibration certificates for all the equipment (if any) that will be used during the investigation.

The service provider shall submit a SHE file to the Risk Control department for assessment and approval before commencing with work.

The service provider shall at all times adhere to the safety, health and environmental programmes, standard and procedures, and plan of Rand Water
