To establish the Centre as a Centre of Excellence in Climate-Smart Agriculture on a global scale, the Agricultural Research Council (ARC) must adopt and implement the most advanced laboratory designs and technologies available. This strategic direction is not only essential for remaining competitive with world-leading institutions but also for ensuring that our research infrastructure is future-proof, adaptable, and aligned with international best practices. To achieve this, the ARC must adopt modular laboratory designs, an approach that yields significant returns on investment and positions its facilities at the forefront of scientific innovation.

The adoption of building modular laboratory systems offers a multitude of strategic advantages. Firstly, modular designs enable rapid installation and easy reconfiguration, allowing laboratories to adapt swiftly to evolving research demands. This flexibility is critical for maintaining relevance in a rapidly changing scientific landscape and for extending the operational lifespan of laboratory spaces without the need for disruptive and costly rebuilds. Secondly, building modular laboratories are engineered with integrated utilities, prefabricated components, and advanced building management systems that collectively enhance safety, reduce operational costs, and support compliance with the highest international standards. Their dynamic nature ensures that laboratories are not only built to current specifications but can also be updated and expanded as new technologies and research methodologies emerge. This future-proofing capability will be essential for maintaining our competitive edge and supporting multidisciplinary, collaborative research teams. In summary, by looking beyond South Africa's borders and learning from global leaders in research infrastructure, the ARC is committed to creating a dynamic, sustainable, and world-class research environment. This approach will enable the Council to attract and retain top scientific talent, foster innovation, and fulfil its mandate to lead climate-smart agricultural research on the continent and internationally.

We are looking for:

A specialised professional responsible for the planning, conceptualisation, and detailed engineering design of scientific, medical, research, testing, or high-containment laboratory facilities. The laboratory designer integrates architectural layout, workflow engineering, biosafety principles, and mechanical, electrical, and plumbing (MEP) systems to create compliant, safe, efficient, and accreditation-ready laboratory environments. The laboratory design specialist must ensure that the facility meets international standards, including ISO/IEC 17025, ISO 7218, EN 16121, EN 14727, GLP, biosafety, and environmental regulations, as well as national building codes, biosafety regulations, and client-specific scientific requirements. Their role extends across the full lifecycle of the project, from needs assessment and design development to construction oversight, commissioning, and readiness for accreditation or regulatory approval. The laboratory design specialist must understand scientific workflows, equipment requirements, contamination control, HVAC engineering, safety systems, digital laboratory technologies, and operational ergonomics. Their objective is to create a laboratory that is safe, functional, adaptable, energy-efficient, and aligned with the intended scientific purpose, while ensuring long-term sustainability and optimal total cost of ownership.

Proven Track Record

Demonstrate unique expertise in the design and implementation of smart laboratory infrastructure, as evidenced by their work at other leading research facilities.

Direct Knowledge Transfer and Customization

Must understand the latest innovations and best practices in smart laboratory design.

Strategic Partnerships and Global Collaboration

Alignment with ARC's Strategic Objectives

The company's proven ability to deliver compliant, adaptable, and high-performing research environments that support ARC's mandate for innovation, sustainability, and research excellence.

Risk Mitigation and Compliance

The laboratories designed must meet stringent international standards for safety, compliance, and adaptability, including BSL 1-3 containment labs. Mitigate the risks associated with laboratory design and ensure that ARC's facility meets all regulatory and operational requirements.

Efficiency and Value for Money

Help streamline the procurement and implementation process, reducing delays and ensuring that ARC benefits from a solution that has been tested and validated in leading international contexts. This approach will maximize value for money by leveraging existing designs, expertise, and proven technologies.

Pilot Demonstration

The consultant may propose a demonstration of a pilot modular laboratory unit to illustrate design compliance and performance. This will be evaluated as an added-value offering
