## **3 BROAD-BASED BLACK ECONOMIC EMPOWERMENT AND SOCIO-ECONOMIC OBLIGATIONS**

SFF Association fully endorses and supports the Government's objective of Broad-Based Black Economic Empowerment and it is strongly of the opinion that all South African business enterprises have an equal obligation to redress the imbalances of the past.

SFF Association would therefore prefer to do business with enterprises who share these same values and who are prepared to contribute to meaningful B-BBEE initiatives [including, but not limited to subcontracting and Joint Ventures] as part of their tendered Submissions. All procurement transactions will be evaluated accordingly.

### **3.1 B-BBEE Scorecard and Rating**

- the 80/20 system for requirements with a Rand value of up to R50,000,000 (all applicable taxes included) OR
- the 90/10 system for requirements with a Rand value above R50,000,000 (all applicable taxes included)

When SFF association invites prospective Service Providers to submit Proposals for its various expenditure programmes, it requires Tenderers to have their B-BBEE status verified in compliance with the Codes of Good Practice issued in terms of the Broad Based Black Economic Empowerment Act No. 53 of 2003.

Tenderers are required to complete Annexure A [the B-BBEE Preference Point Claim Form] and submit it together with proof of their B-BBEE Status as stipulated in the Claim Form in order to obtain preference points for their B-BBEE status.

**Note:** Failure to submit a valid and original B-BBEE certificate or a certified copy thereof at the Closing Date of this RFP will result in a score of zero being allocated for B-BBEE.

### 3.2 B-BBEE Joint Ventures or Consortiums

Tenderers who would wish to respond to this RFP as a Joint Venture [JV] or consortium with B-BBEE entities, must state their intention to do so in their RFP submission. Such Tenderers must also submit a signed JV or consortium agreement between the parties clearly stating the percentage [%] split of business and the associated responsibilities of each party. If such a JV or consortium agreement is unavailable, the partners must submit confirmation in writing of their intention to enter into a JV or consortium agreement should they be awarded business by SFF association through this RFP process. This written confirmation must clearly indicate the percentage [%] split of business and the responsibilities of each party. In such cases, award of business will only take place once a signed copy of a JV or consortium agreement is submitted to SFF Association.

Tenderers are to note that for the purpose of evaluation, a JV will be evaluated based on one consolidated B-BBEE score card as per the **Preferential Procurement Regulations 2017** preference point scoring.

**Note:** Failure to submit a valid and original B-BBEE certificate for the JV or a certified copy thereof at the Closing Date of this RFP will result in a score of zero being allocated for B-BBEE.

### 3.3 Subcontracting

SFF Association fully endorses Government's transformation and empowerment objectives and when contemplating subcontracting. Tenderers are requested to give preference to companies which are Black Owned, Black Women Owned, Black Youth Owned, owned by Black People with Disabilities, EMEs and QSEs.

In terms of sub-regulation 5 of Regulations 6 and 7 of the Preferential Procurement Regulations, 2017 respectively, if contemplating subcontracting, a tenderer will not be awarded points for B-BBEE status level of contributor if the tender documents indicate that the tenderer intends sub-contracting more than 25% of the value of the contract to any other person not qualifying for at least the points that the tenderer qualifies for, unless the intended subcontractor is an EME that has the capability to execute the subcontract.

In terms of Annexure A of this RFP [the B-BBEE Preference Point Claim Form], Tenderers are required to indicate the percentage of the contract that will be sub-contracted as well as the B-BBEE status of the sub-contractor/s.

In addition, tenderers are required to attach a letter from the intended sub-contractor in the event of the Tenderer's appointment.

## PART 2: BACKGROUND OVERVIEW AND SCOPE OF WORK

### 12 BACKGROUND OVERVIEW

#### Planned Potential Fields Geophysical Work as Follows:

As part of its committed Exploration programme, SFF is soliciting the following technical services through its appointed Project Management Company “PV-SA”:

- A. Sub-Project#1:** Airborne Gravity and Magnetic Survey (AGAMS) for Block B2, South Sudan.
- B. Sub-Project#2:** Quality Assurance / Quality Control of acquired data, Data processing, Modelling, Inversion and interpretation of Gravity and Magnetic data in specified area\s of Block B2, South Sudan.

Both sub-projects will run concurrently and in collaboration with each other. Input and advice of an Expert/Company appointed for Sub-project#2 is required prior to commencement of the AGAMS in Block B2 in order to fix the survey acquisition parameters to be considered by the Sub-Project#1 Contractor during data acquisition. Any data not approved by the Contractor of Sub-Project#2 on technical grounds and/or due to quality control issues, will not be accepted by SFF and Project Management consultants (PV-SA). In the event of any dispute, PV-SA and the SFF Technical team will have final authority for dispute resolution.

The tender for Sub-Project#1 has already being issued separately. Under no circumstances will both sub-projects be awarded to the same company to avoid a “Conflict of interest” and to get the best possible results.

The present tender is for Sub-Project#2.

#### 12.1 Description of Sub-Project#2

RFP number SFF/2022/NOE/SP#2 is for a service provider, referred to as the Tenderer in this tender document, to carry out Sub-Project#2 comprising Quality Control, Data Processing, Modelling, Inversion and Interpretation of Gravity and Magnetic Data (GAMD) for Licence Block B2 in South Sudan.

#### 12.2 Project Information

South Africa’s state-owned Strategic Fuel Fund (“SFF”) signed an Exploration and Production Sharing Agreement (EPSA) with the Ministry of Petroleum, South Sudan government during May 2019. Under this agreement, SFF will carry out E&P activities in Block B2 in partnership with South Sudan’s national oil company, Nile Petroleum Corp (carried partner).

As part of its obligations, SFF requires the Tenderer to carry out Sub-Project#2 comprising Quality Control, Data Processing, Modelling, Inversion and Interpretation of Gravity and Magnetic Data (GAMD) for Licence Block B2 in South Sudan. SFF is seeking a Tenderer that can demonstrate capability and record of accomplishment in conducting such technical work in the African region in general and preferably within South Sudan.

#### 12.3 Technical Overview

For the fulfilment of the EPSA responsibilities and commitments in licence Block B2 in South Sudan, SFF plans to develop an understanding of the Block B2 Petroleum system and will also

develop a Geological model as part of exploration risk mitigation. It includes acquisition of new airborne gravity and magnetic data across licence Block B2. This process will assist in scaling down and delineating target areas for the petroleum exploration programme.

The survey area of interest is located in the south-eastern portion of South Sudan and extends over an area estimated at around 37000 sq-km, equivalent to around 26000 Line-km of geophysical data (based upon preferred main line spacing). During this acquisition phase, given the locations of Bor and Juba airports within or close to licence Block B2, it is anticipated that either or both airports may be used as base stations for daily flight departures. This potentially offers the option of simultaneous flights from the two airports to help fast-track survey data acquisition while also shortening survey time.

Survey design parameters, specifications and products of this survey will be determined essentially on subsurface depth of geological targets and legacy data in consultation with Experts engaged for Sub Project#2. Legacy data over the area of interest is limited to basic geological mapping, a small vintage 2D seismic interpretation, and vintage gravity coverage and satellite gravity data.

Airborne traverse lines will be flown in a south west to north east (N 40° E) direction with a traverse line spacing of 2,000m. Tie lines are required to be flown perpendicular to the traverse lines at a spacing of 6,000m apart.

Survey quality control, Data Processing, Modelling, Inversion and Interpretation of GAMD is required and therefore forms the basis of the SOW for Sub-Project#2 that needs to be carried out by an independent contractor.

## 12.4 Survey Location

**Location and Terrain:** The survey is situated in South Sudan. A project area map is provided below with the survey boundary (red line) shown together with a tabulated list of block boundary co-ordinates (Figure1). The terrain is moderate and therefore a gentle drape survey is recommended.

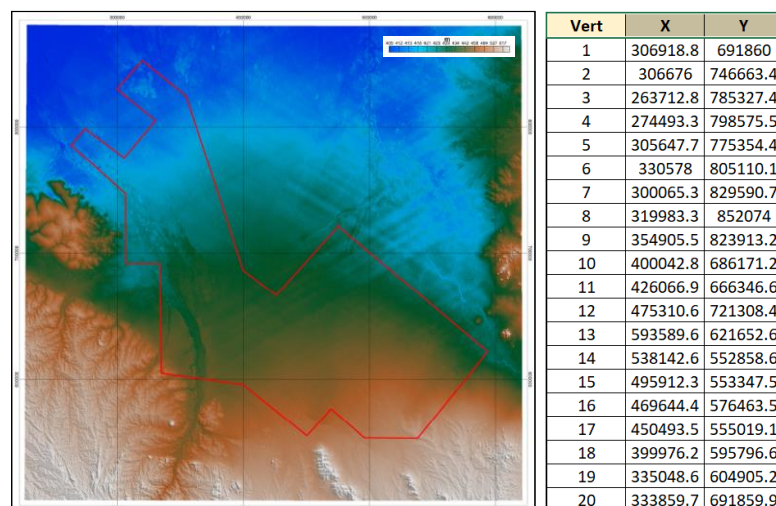

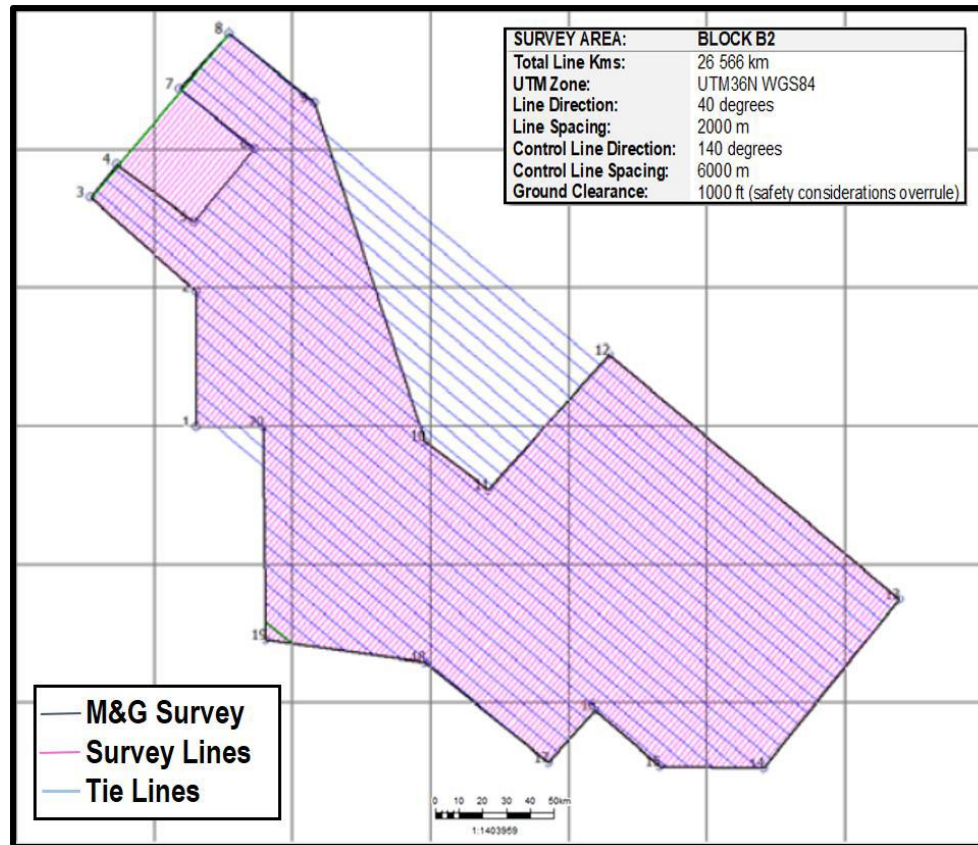

Figure 1: Topography map with survey boundary and tabulated co-ordinates

**Survey Specifications:** A summary of the survey line directions and line kilometres is provided in the map and inset table below.

## 12.5 Sub-Project#2 Objectives

The objectives of Sub-Project#2 are as follows:

- The Sub-Project#2 Service provider must optimise the parameters of survey data acquisition in consultation with the Service provider of Sub-Project#1 on reasonable limits without compromising safety of crew, machine and/or aircraft.
- Sub-Project#2 Service provider has to develop a communication channel with the survey data acquisition team to preferably get data in live real time while the survey is in progress or at least at the end of each day to assess the quality of data.
- Sub-Project#2 Service provider will inform the Sub-Project#1 survey data acquisition team immediately regarding data acceptability while communicating similar to the Project Management Consultant PV-SA and the SFF technical team.
- The Sub-Project#2 service provider must ensure that SFF receives the best possible quality survey data set on a timely basis and to ensure that the usability of the survey result is not impacted by errors, omissions or data noise generated by equipment, methodology and/or processing.
- Time keeping and any stand by time is to be logged and communicated with reasons thereof.
- To improve regional to basin scale understanding of the area of interest by defining the basement depth, interpreted lithology, fault throws and major lineaments, structure of sediment fairways and depositional-centers which may be present in the sedimentary section. This will promote future exploration activities in this under-explored region through the integration of independent data within a geologically coherent regional structural framework.

## 12.6 Scope of Work

The scope of work (goals, and deliverables) for Sub-Project#2 are as follows:

- On-site / remote quality control of the AGAMS, ensuring all instrument tolerances, calibration requirements, re-flight tolerances, and overall survey accuracy-resolution requirements are in order and according to acceptable international standards.
- Provide contractual specifications for data quality, review and approval of pre-survey start-up calibrations including test line data, static gravity tests, drift tests, GPS accuracy plots, altimeter calibrations, magnetic compensation and figures of merit, and review ongoing production data (Daily/weekly), among others;
- Reporting and presentation (Quality control);
- Provide regional context by compiling and comparing different data types and interpretations (e.g. legacy and public domain data);
- Airborne Survey Data processing, filtering and image processing;
- Produce updated structural maps to delineate basins, basement highs and major faults through integrated interpretation of gravity and magnetic data;
- Produce 3D regional basement relief over the project area;
- Assess the regional lithospheric discontinuities through 2.5D gravity modelling along selected profiles;
- Inversion studies and interpreted results
- Refine the shallow-sediment model using all available data and information;
- Integrated potential field data interpretation incorporating legacy seismic and data from well Kedelai-1 in order to obtain a preliminary structural interpretation in the shallow section, which could be set to design and plan new seismic surveys and/or support seismic interpretation;
- Reporting and presentation (Processing-Interpretation).

## 12.7 Work Execution Plan

A Project Execution Plan (PEP) is required [that defines how the quality control, processing, modelling, and interpretation of the airborne gravity and magnetic acquisition survey in Block B2 will be undertaken](#). It will detail the specific activities in the project, the resources applied to the project, and the organization of the project. The major elements of a project execution plan are:

- Scope Definition
- Project scheduling
- Timelines as per deliverables (Milestones)
- Quality and technical specifications
- Resource allocation
- Safety and Environmental Management System (refer to Appendix IV for basic guidance)

## 12.8 Deliverables:

The Sub-Project#2 Service provider is required to provide the following service components:

### A. Quality Control

- To provide quality control for an upcoming airborne gravity and magnetic survey in South Sudan. The survey area of interest is located in the south eastern portion of South Sudan and covers an extensive area estimated at 37,000 km<sup>2</sup>.

- Provide review of contractual specifications for data quality including instrument tolerances, calibration requirements, re-flight tolerances, and overall survey accuracy - resolution requirements prior to survey commencement;
- Review and approval of pre-survey start-up calibration test line data, static gravity tests, drift tests, GPS accuracy plots, altimeter calibrations, magnetic compensation and figures of merit prior to airborne survey commencement;
- Review ongoing survey data (daily and weekly) including daily repeat lines, calibrations, free air grids, tie-traverse crossovers, turbulence indicators, magnetic spiking and compensation results to ensure that the results fall within required contractual specifications;
- Prompt survey demobilisation approval;
- Provide a short summary report on the results and overall accuracy - resolution of results acquired during the survey;
- Review delivery of final data products.

## **B. Structure, Modelling, Inversion and Other Studies**

The Contractor undertakes to execute the Services as specified below:

- To carry out desktop study comprising modelling, inversion and interpretation of airborne gravity and magnetic data in order to review and/or validate available geological, seismic, regional gravity and magnetic legacy data relating to Block B2, South Sudan as provided by SFF and or available in the public domain.
- Review available data including results from basins to the NW of the current AOI;
- Establish physical property contrasts for the basins of interest (particularly density) noting legacy data for the study area is limited to basic geological coverage, a small vintage seismic interpretation, vintage ground gravity coverage (North Western portion of the AOI) and satellite gravity data. Interpretation will rely on extrapolating data from known oil fields in contiguous blocks such as Block 5A.
- Data processing and filtering:
  - (a) Spectral filter data to establish the optimal accuracy-resolution dataset for gravity modelling;
  - (b) Carry out 3D terrain inversion to derive the Bouguer Anomaly;
  - (c) Use available seismic sounding data to perform isostatic correction to the Bouguer Anomaly;
  - (d) Create a series of filtered products from the isostatically corrected Bouguer Anomaly including derivative and spectral slices;
  - (e) Filter and image magnetic data;
- Unconstrained inversion:
  - (a) Perform simple 3D unconstrained inversions on gravity and magnetic data, and
  - (b) Extract depth slices from these datasets;
- Perform automated depth to basement analysis: on magnetic data (including Werner Deconvolution, Naudi and Euler Deconvolution);
- Digitise magnetic form lines: and characterise these by automated modelling results;
- Create a first-pass depth to magnetic basement: by digitising results in 3D space and running picks through implicit modelling software;
- Carry out a structural interpretation: using SFF information, historical data, gravity and magnetic results.

- Create series of 2.5D gravity forward models: (supported by magnetic results) starting from the NW where basin controls are better defined and using geological interpretations as starting points;
- Use the structural interpretation, geology, magnetic basement model and 2.5D forward models to build an implicit 3D basin model for the entire AOI;
- Run a 3D inversion on the starting model with physical property constraints from the earlier studies and forward modelling results. The objectives of this exercise serve two purposes:
  - (a) Create a conceptual 3D exploration model of the survey area;
  - (b) Use the conceptual model to constrain geophysical inversion results and/or build on the conceptual model using geophysical inversion results.

c	Environmental impact assessment support as required
d	Preliminary Material Safety Data Sheets (especially for hazardous substances).
e	Qualitative risk analysis
f	Hazard identification study

### HSE philosophy

Inherent safety and protection of the environment is a prerequisite from the beginning of the design process.
