Scope of Works	1. Project Background The South African National Energy Development Institute (SANEDI) was established under the National Energy Act, Act No. 34 of 2008, to direct, monitor and conduct energy research and development, promote energy efficiency, and support energy technology innovation in South Africa. SANEDI is mandated by the Department of Electricity and Energy (DEE) to implement, monitor and evaluate the South African Energy Efficiency Standards and Labelling (S&L) Programme in collaboration with strategic partners including the National Regulator for Compulsory Specifications (NRCS), the South African Bureau of Standards (SABS), and the Department of Trade, Industry and Competition (the dtic). As part of the S&L Programme, the VC9008 compulsory specification for energy efficiency and labelling of electrical and electronic apparatus introduced Minimum Energy Performance Standards (MEPS) and mandatory energy efficiency labelling requirements for household refrigerators and combination fridge-freezers. Refrigeration appliances are among the most energy-intensive household appliances in South Africa and contribute significantly to residential electricity consumption. The implementation of VC9008 sought to reduce national electricity demand, improve consumer awareness, stimulate market transformation toward energy-efficient technologies, and contribute toward greenhouse gas emission reductions.

SANEDI intends to appoint a suitably qualified service provider to conduct an Ex-post Regulatory Impact Assessment (RIA) of the VC9008 regulation for the period 2020–2025. The study will assess the effectiveness, efficiency, environmental impact, socio-economic outcomes, market transformation effects, and implementation challenges associated with the regulation.

The findings of the study will support evidence-based policy refinement, future regulatory improvements, and strategic decision-making for the continued implementation of appliance energy efficiency regulations in South Africa.

2. Project Objectives:

1. Assess the effectiveness of the VC9008 regulation in improving the energy efficiency performance of household refrigerators and combination fridge-freezers in South Africa.
2. Quantify the energy savings achieved between 2020 and 2025 as a result of the implementation of Minimum Energy Performance Standards (MEPS) and energy efficiency labelling requirements.
3. Estimate the associated greenhouse gas (GHG) emission reductions resulting from reduced electricity consumption and refrigerant-related impacts.
4. Assess market transformation impacts, including changes in appliance efficiency classes, product availability, technology adoption, imports, and consumer purchasing trends.
5. Evaluate the socio-economic impacts of the regulation, including:
 - impacts on manufacturers, importers, distributors and retailers;
 - employment impacts across the appliance value chain; and
 - participation and opportunities for Small, Medium and Micro Enterprises (SMMEs).
6. Assess levels of regulatory compliance, enforcement effectiveness, and stakeholder awareness relating to VC9008 requirements.
7. Identify implementation challenges, regulatory gaps, unintended consequences, and opportunities for improvement.
8. Provide evidence-based recommendations to strengthen future appliance energy efficiency regulations and implementation mechanisms.

3. Scope of Works

The appointed service provider will be required to undertake the following activities:
