5(e) MBD 9: CERTIFICATE OF INDEPENDENT BID DETERMINATION**NOTES**

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

³ Joint venture or Consortium means an association of persons for the purpose of combining their expertise, property, capital, efforts, skill and knowledge in an activity for the execution of a contract.

1.0 This Municipal Bidding Document (MBD) must form part of all **bids**¹ invited.

2.0 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or **bid rigging**).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

3.0 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:

- a. take all reasonable steps to prevent such abuse;
- b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
- c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.

4.0 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of **bid rigging**.

5.0 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid.

 - (a) prices.
 - (b) geographical area where product or service will be rendered (market allocation).

 - (d) the intention or decision to submit or not to submit, a bid.
 - (e) the submission of a bid which does not meet the specifications and conditions of the bid.

SECTION 7: SCOPE AND SPECIFICATION OF REQUIRED SUPPLY / SERVICES

7.1. SCOPE OF SUPPLY/SERVICES

7.1.1. BACKGROUND

The High Voltage Substations Branch is maintaining high voltage equipment with primary voltages range of 11- 275 kV. Mineral insulation oil plays a critical role in high-voltage equipment by providing electrical insulation and facilitating heat dissipation. The mineral oil prevents electrical arcing or short circuits by offering high dielectric strength inside power transformers. It also absorbs the heat generated by the transformer's core and windings during operation, helping to maintain optimal temperature levels. Additionally, the oil acts as a medium for transferring heat to the radiator system, ensuring the transformer operates efficiently. The mineral oil also serves as a barrier to contaminants and moisture, which can deteriorate the transformer's internal components, thus enhancing the longevity and reliability of the transformer.

Diagnostic testing and analysis of mineral insulating oil are crucial for effective condition monitoring oil insulated high voltage equipment and network protection. Regular oil testing helps identify potential issues like contamination, oxidation, moisture content, and changes in dielectric properties, which could indicate insulation degradation or electrical faults. By assessing parameters such as the oil's acidity, dissolved gas analysis (DGA), and dielectric strength, operators can detect early signs of transformer malfunctions, preventing costly failures. Monitoring the oil's condition also enables better decision-making regarding maintenance or oil replacement, ensuring the transformer's safe operation and extending its lifespan. Additionally, timely detection of abnormalities allows for improved protection strategies for the entire electrical network, minimizing downtime and ensuring grid stability.

7.1.2. OBJECTIVE

To utilise the services of specialist contractors for the diagnostic testing and analysis of insulating oil, as required for condition monitoring of high voltage power transformers and associated equipment.
