## **7. SCOPE OF WORK: RFQ 201225: APPOINTMENT OF SERVICE PROVIDERS FOR THE CONSOLIDATION AND ENHANCEMENT OF HIGH-POWER PLANT CONTROL AND MEASUREMENT SYSTEMS PHASE 1.**

### **7.1 PURPOSE OF THIS DOCUMENT**

Short description of the business being done, its context, and the reason for the project. Also describe the work that the SABS intends to do with the delivered product:

The High-Power Plant Control and Measurement Systems is utilized for supervisory control, data acquisition and measurement of test parameters during testing of medium voltage distribution equipment up to 11kV, 31.5kA. The control and measurement systems are currently implemented utilizing three computer systems, with associated auxiliary systems. Due to the nature and date of manufacture of this equipment, the systems are integrated in such a way that three operators are required to operate the plant. Due to the advancement in technology and speed of modern computers, the multiple systems can be consolidated into one high speed computer system. This approach would reduce the need to utilize three operators to one. Further, auxiliary control systems can be enhanced to digital control system instead of manual control that is currently employed. The measurement system trigger unit can also be updated to be reliable than the current prototype that is used. This proposed consolidation and enhancement would make the operation of High-Power Plant easier to do and understand, and enhance the quality of results, and speed of operation.

### **7.2 APPLICABLE AND REFERENCE DOCUMENTS**

List any references that may be important to the complete understanding of this technical specification:

--

The control and measurement systems in High Power Plant are used during testing of medium voltage distribution equipment rated up to 11kV and 31.5kA as defined in the below standards:

The following standards are some of the applicable specifications:

- SANS / IEC 61439 series of standards
- SANS / IEC 60076 series of standards
- SANS 780 standard
- SANS 61230 series of standards
- SANS 62271 series of standards

The main feature of the system is to consolidate the current timer system, SCADA system and Measurement system into one high speed computer, to enable the control of the plant from one point, and enhancing Generator excitation system from manual analog control to digital, and implementing the measurement trigger system from prototype to implemented system.

### 7.3 REQUIREMENTS
