

## Clarification Questions:

1. **Surface Area Clarification:**

Could you kindly confirm whether the measurement provided is **74m<sup>2</sup>** or **74m<sup>3</sup>**? If it is **74m<sup>3</sup>**, please provide the relevant dimensions so we can accurately calculate the square meterage required for the wagon.

**TE Response:** The tank is 74m<sup>3</sup> in terms of the capacity, please use the attached drawings to calculate the surface area as it is easy to use the attached drawings to determine the area.

2. **Reference Letter Requirement:**

In the event that we are unable to provide a formal reference letter, would it be acceptable to submit a **signed completion certificate** and, where available, the associated **purchase order (PO)**? We would ensure that these documents clearly reflect the completion of **blasting, but it may also cover coating** work. Additionally, please confirm if a reference that covers **blasting and coating** (but not specifically "short blast") would be considered acceptable.

**TE Response:** Reference letters that show blasting and coating will be accepted as it is similar work. Only reference letters will be acceptable and not a purchase order.

3. Could you kindly advise — in the event of any delays during the shotblasting of the wagon, would we be permitted to accelerate the work to ensure completion within the same day? Additionally, will there be someone available on-site to sign off the work upon completion?

**TE Response:** Service providers are welcome to work overtime at their own cost to complete the work within the specified and agreed time and arrangements will have to be made first prior with the business if the service provider will work extended hours so that TE quality representative must be there to sign off documents.
