|  | <b>REQUEST FOR QUOTATION</b>  |  | Form No: UW-RFQ-2<br>Version No: 3/2023<br>Effective Date: Jul 2023 |

### **Handling and Rigging and Transportation**

The plant and rigging equipment used for the handling of pipes shall be such that no pipe shell is over- stressed during any operation.

In the loading, transportation and unloading of pipes, the Manufacturer / Supplier shall at all times operate and maintain suitable loading / unloading equipment and vehicles to ensure that pipes and their protective linings and coatings are not damaged during loading, transport and unloading. In particular, the use of excavation equipment for handling of pipes will not be permitted.

Slings shall be suitably rated and certified for the loads to be handled and in good condition. The use of deteriorating and frayed slings shall not be permitted.

All pipes longer than 9m in length shall be lifted and handled with the aid of a "spreader" lifting beam. Pipes shall be stacked with a minimum clearance of 50mm between adjacent pipe walls and a minimum of 200mm clear of the ground.

Pipes shall be stacked with sufficient supports to prevent permanent longitudinal deflections. Pipes shall also be stacked in a manner that limits loading on lower layers of pipes. Any pipe showing permanent ovality as a result of surcharge loading will be rejected by the Purchaser.

The Supplier is to provide suitable dunnage for on-site stacking of pipes upon delivery. It is possible that the pipes will be stored for several months and dunnage shall not suffer from UV or moisture degradation if exposed to the elements for up to 18 months.

Where lengthy storage periods are anticipated, the Purchaser may request that UV protection be provided in the form of a coating (additional to the corrosion protection coating if such coating is not UV resistant) or an 80% shade cloth cover to the stored pipe.

### **Delivery and Acceptance**

The Supplier shall remain responsible for all pipes until the Purchaser (or his/her designated representative) has taken delivery on site or at the pipe storage facility. The Supplier will be responsible for offloading, including a suitable crane at the agreed delivery point on-site or at the pipe storage facility.

Pipes will be re-tested for compliance with this specification after delivery on site and all defects to the pipe, coating or lining and shape shall be repaired by the Supplier at his/her expense.

All pipe deliveries shall be accompanied by delivery notes which will be checked by the Purchaser's representative on site. The Purchaser reserves the right to not accept and reject pipe deliveries where there are discrepancies.

Unless otherwise agreed to in writing with the Purchaser, pipe deliveries will only be accepted during normal working hours.

### **Protection of Pipe Ends**

Before transportation all cement mortar pipes are to be fitted with end caps made from durable UV resistant plastic sheeting (or other suitable material). Once offloaded both cement mortar and epoxy lined pipes require end caps which shall remain in place until its pipe has been laid and the pipe end is no longer open to the elements. It must, therefore, remain in place until it is no longer needed to protect the pipe from ingress of foreign material.

In addition, bevel-ended pipes for butt-welding are to be fitted with bevel protectors before leaving the Manufacturer's premises. These are to remain in place until removed to permit the on-site welding operation.

Whilst pipes are in storage, the Supplier or contractor as relevant shall ensure that all end caps and bevel protectors remain in place.

All end caps and bevel protectors are to be disposed of in an environmentally friendly manner and in accordance with the project specification.
