MRS AN DLAMINI
ACTING MUNICIPAL MANAGER

TERMS OF REFERENCE FOR THE DEVELOPMENT OF ROAD ASSET MANAGEMENT SYSTEM (RAMS) AND PROFESSIONAL SUPPORT FOR A PERIOD OF THREE (3) YEARS

1. Introduction

Bids are hereby invited from IT companies involved in System Development for the provision of a Road Asset Management System, system deployment and configuration in Amajuba District Municipality Server, Information and decision support system are indispensable for the effective management of the road network at both the operation and strategy level, to ensure good governance outcomes and optimal service delivery. In South Africa and throughout the world the road asset has suffered from decades of under-investment due to:-

- 1.1** Lack of investment in planned or periodic maintenance.
- 1.2** The lack of whole cycle management strategy.
- 1.3** Lack of effective and efficient routine and periodic maintenance.
- 1.4** Level of service has been budget driven rather than performance based.

As a result, many roads from strategic routes through to unclassified local roads are in a critical condition requiring capital investment to raise them to the desired level of service and thereafter to maintain them.

2. Problem Statement

Roads network development in South Africa is constitutionally a concurrent function across the three spheres of government, and thus to be effective relies on the coordination of processes and information sharing. Practically this has not been very successful, as evidenced by the commissioning of study to develop the Road Infrastructure Strategic Framework for South Africa (RISFSA). Chapter 4 of RISFSA has found that road asset management systems that are implemented by roads authorities are not of the same standard and the information that is drawn from them is not consistent. In addition, the various systems are not integrated internally or across the sphere of government. This makes it very difficult to adequately plan for interventions.

Poor planning in turn leads to unsustainable expenditure of roads budgets which cannot be afforded in the current-economic context of South Africa.

3. Background

The National Department of Transport (NDoT) has identified forty-four (44) rural district municipalities in the country as beneficiaries of their Rural Road Asset Management System grant to assist and support the management of rural roads through the development of a Road Assets Management System (RAMS).

The scope and purpose of this grant is to assist rural municipalities to setup rural roads assets management system and to collect rural data in line with the Road Infrastructure Strategic Framework for South Africa (RISFSA) with the following measurable outputs:

3.1 Collection of road inventory data including condition assessment and traffic data; and

3.2 Setting up pavement and bridge management system compatible with national standards.

4. Statement of Work

Amajuba District Municipality (ADM) is looking for a Professional Service Provider to supply a Rural Road Asset Management System (RRAMS) under a subscription basis for a period of 36 months.

The objectives of the project are to provide the Amajuba District Municipality with a sustainable spatial data subscription solution that meets the technical requirements of the Rural Road Asset Management System grant and assists the district to collect and maintain data in a timeous and accurate manner.

All roads' authorities should conduct roads condition surveys regularly, for both surfaced and unsurfaced roads. Such information coupled with increased levels for roads should aim at reducing the capital and maintenance backlog on the South African road network.

The need to access the current backlog with respect to the road provision and maintenance needs has been identified. Through Visual Surveys use of surveillance equipment, a combined analysis of both paved and unpaved roads, we will be able to get the status of deterioration of roads such as potholes, rutting, corrugations, broken edges, erosion, shoulder wear and deformation. Once the Road Network Assessment has been done, an Optimum Maintenance Fund Allocation can be done accordingly to address the current backlog of the South African Road Network Condition. Knowing the condition of the road network, the managers and engineers will be able to maintain and improve the quality of our roads.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
