11.2 Background

11.2.1 PRASA must ensure that station platforms are accessible to all commuters in accordance with the Railway Safety Regulator's (RSR) guidelines outlined in the document ARP 084-1:2009 Edition 1, RSR 84-1:2009 Edition 1 – Passenger Platforms. The RSR requires PRASA to prioritize commuter safety by reducing the likelihood of accidents that may cause physical harm to commuters while using the service, such as falling on the tracks, being caught in train doors, or tripping or falling within the station premises. By ensuring that stations are fully accessible, passengers can be assured that they can board and disembark safely.

11.2.2 The legislation mandates that all newly constructed public transport facilities follow the Universal Access (UA) guidelines, which state that all passengers should be given the necessary components to travel with ease, comfort, and dignity. This includes fully accessible station facilities, level access to rolling stock, and fully accessible rolling stock. Additionally, the National Land Transport Act requires that public transport facilities make it easy for vulnerable commuters such as children, the elderly, pregnant women, individuals with disabilities, and those accompanying children to access the service.

11.2.3 Given the above, assessments were conducted at various stations to determine compliance with platform vertical and horizontal clearance standards. The results showed over 940 non-compliant platforms nationwide, with 538 in Gauteng, 148 in KZN, and 254 in the Western Cape. The assessments included evaluating 119 individual platforms at 40 stations, of which only 31 were adequate and did not require immediate attention. In Gauteng, 49 platforms from 20 assessed stations were prioritized for platform rectification, while in KZN, 20 platforms from 10 assessed stations were prioritized. In the Western Cape, 19 platforms from 10 assessed stations were prioritized. Additionally, three stations' platforms in the Eastern Cape were found to be non-compliant.

11.3 Problem Statement

11.3.1 The station platforms which have been identified for this project do not conform to the specification (ARP 084-1:2009 Edition 1, RSR 84-1:2009 Edition 1) – Passenger Platforms) in terms of horizontal (1565mm) and vertical (1070mm) clearances.

11.3.2 PRASA has therefore decided to roll out mobile ramps as an interim solution to address the misaligned train-platform interfaces.

11.4 Scope of Works

11.4.1 Mobile ramps are assistive technology used in railway station platforms to provide accessibility for passengers with mobility challenges. This specification outlines the requirements for designing, constructing, and operating mobile ramps in railway station platforms.

11.4.2 This specification covers the design, construction, and operation of mobile ramps used in railway station platforms. The ramps should provide safe and reliable access for passengers with mobility challenges, such as wheelchair users, elderly people, and pregnant women.

11.4.3 Project Execution Plan should encompass liaison with all the role players, i.e., PRASA Rail Customer Services, Train Operations and Infrastructure Maintenance, PRASA CRES, Transnet Freight Rail (where affected).

11.4.4 Design Requirements:

The mobile ramps should meet the following design requirements:

11.4.4.1 The ramps should be designed to fit different platform heights, and train configurations by the requirements outlined in SANS ARP 084 - 1:2009, SANS 10400 Part S 2011, and the condition-based assessment report PRASA will provide.

11.4.4.2. The ramps should have a non-slip surface to ensure safe and secure passage for passengers.

11.4.4.3. The ramps should have handrails on both sides to support and stabilize passengers.

11.4.4.4. The ramps should have a weight capacity of at least 150 kg to accommodate passengers in wheelchairs and their mobility devices.

11.4.4.5. The width of the ramp should be at least 70 cm to accommodate the passage of a standard-sized wheelchair.

11.4.4.6. The ramp length should be sufficient to create a slope of no more than 1:12 for the required platform height. The exact length will depend on the specific platform height and train configuration.

11.4.4.7. The height of the handrails should be between 86 and 96 cm above the ramp surface.

11.4.4.8. The ramp should have a lip or flap at the top edge to prevent the ramp from slipping off the platform and to provide a smooth transition onto the train.

11.4.4.9. The ramps should withstand outdoor weather conditions like rain and excessive heat.

11.4.4.10. Provide detailed designs for submission to the Railway Safety Regulator (RSR) for approval. Only products with the RSR-issued "No objection" certificate shall be accepted.

11.4.4.11. Handover certificates and As-built drawings.

11.4.4.12. Training and operating manuals.

11.4.5 Construction requirements:

The mobile ramps should meet the following construction requirements:

11.4.5.1 The ramps should be made of durable materials such as aluminium or steel.

11.4.5.2. The ramps should be lightweight and easy to manoeuvre by station staff.

11.4.5.3. The ramps should have a secure attachment mechanism to the platform and the train.

11.4.5.4. The ramps should be easy to assemble and disassemble for storage when not in use.

11.4.5.5. The ramps should have wheels for easy transport to different locations on the platform.
