TERMS OF REFERENCE FOR THE APPOINTMENT OF A PROFESIONAL SERVICE PROVIDER FOR CLIMATE SMART LABS: INFRASTRUCTURE AND EQUIPMENT– AT ANIMAL PRODUCTION INSTITUTE.

1. INTRODUCTION AND BACKGROUND

The Agricultural Research Council (ARC) is a research science institution that conducts research, develop human capital, foster innovation and transfer technology to develop the agricultural sector.

2. OBJECTIVE

To appoint a professional service provider / Project Construction Manager to assist with a feasibility study, proposed plan and design for refurbishment of the current lab facilities, technical drawings, Bill of quantities and advise on the relevant municipal or other industry related approvals for compliance.

The professional service provider / Project construction manager must submit a clearly outlined Proposal that includes the following proposed lab operational rooms listed below: **Please see annexure A for pictures**

1. Infrastructure renovation and maintenance of current facility

- Revamp of roof. The roof must have trusses to allow for a stable surface to support the installation of solar panels and include roof tiling, waterproofing and painting.
- Revamp of ‘fish labs’ to modernize working laboratory space or offices which could be rented out and allow for income generation. A site visit was done at Next Biosciences to view their labs
- Two of the “fish labs” should be converted into one storage facility to store files and samples for long-term use. The room must be well ventilated with censored lighting. The upgrade of the room should include damp protection, demolishing of fish tanks, painting, and tiling. Shelving and filing cabinets must be installed to ensure storage of historic and future sample archiving.
- Revamp of building structure inside. Walls must be re-plastered, receive damp protection and painted. Modern tiling and over-all modern outlook to the building.

2. Ventilation and Temperature control

- Placement of fridge and freezers in a designated area with proper air flow. These items emit a lot of heat and should be placed in an area designed for cold storage.
- The building should be well ventilated, and temperature regulated during warm and cold seasons. Installation of eco-friendly heating and cooling systems or air-conditioners.

3. Access control

- ISO 17025 - general requirements for the competence of testing and calibration laboratories is the main standard used by testing and calibration laboratories. The appointment of an accreditation officer to oversee the system is applied optimally.
- Proper controlled access will also allow for SANAS and DALRRD accreditation.

4. Lighting

- Motion-sensor lighting should be considered in the labs and building to avoid lab lights being unnecessarily left on. Energy efficient light bulbs should be used. Sufficient lighting around the building.

5. Solar panels and UPS

- Although solar panels and UPS may already be covered by facilities, the installation of UPSs in all laboratories to maintain uninterrupted power supply to equipment, including fridges, freezers, PCR machines, centrifuges, vortexes, and computers. Alternatively, a separate UPS to service the Genetics building only.
- Solar Panels, invertors, and batteries. Installation of solar panels on the roof, invertors, and batteries to provide power during load shedding and power cuts. This will provide continuation of work activities and provide alternative energy to the laboratories.

6. Bathrooms

- Revamp of bathrooms. Installation of energy and water-saving taps and toilets. The toilets should be revamped to smart technology and the basin revamped to a more modern built-in basin with water saving taps (automatic on and off-motion sensed). Modernizing bathrooms to provide employees and clients a hygienic environment. Painting is required as well as water damp protection. The wall between the shower and toilet should be demolished to make space for a second cubical with another toilet. In total two modern toilets.

7. Tearoom

- The tearoom must be modernized into a tea/coffee and sitting area for both employees and clients. Modern chairs, tables and a kitchenette will allow the gathering of staff to have lunch, meet and unwind. Installation of coffee dispensers and perhaps a snack machine (extra optional). A proper tearoom is critical for employee well-being and mental health.

8. Animal Genetics boardroom

- The walls between the “dark room” may be demolished and the board room can be extended to include the whole surface area of the “dark room and the current unused space outside the conference room. The floor must be tiled, and walls painted. Energy saving air conditioning is essential. It must be equipped with modern chairs, a centre table with a conference telephone and cabinets and presenter’s bench. Wi-fi, an overhead projector, and fixed whiteboard must be installed. The wall to the passage may be replaced by glass for sufficient lighting. A dimmer for the lights is essential to accommodate presentations. A microphone must be installed for presentations. Adequate audience seating.
- The room may be ‘hired’ out to internal and external clients to host small meetings and workshops. This will also for income generation for the unit.

9. Revamp of kitchen

- A new fridge, microwave and dishwasher must be installed to cater for presentations, clients, and seminars. Painting is essential. Modern cabinets must be installed. New cutlery and utensils must be included. Water saving taps must be installed with a gas heater to save energy. The drainage system requires upgrading.
- A fully fitted kitchen will allow for catering and food services for meetings and workshops, both internal and external. All fitted equipment and appliances should be certified eco-friendly (green lab status).
- The eastern passage must be plastered, painted and tiled.

10. Revamp foyer

- The foyer must be tiled and painted as this is where clients enter and should reflect a modern space to be greeted. Chairs and a coffee table should be provided. The foyer must include a reception counter, a CCTV system and intercom system.

11. All the labs must have energy-saving air conditioning, water-saving taps and built-in basins. Painting is essential. Water damp protection is essential. The walls along the passage may be demolished and replaced by glass to ensure energy saving. Lighting should be motion detected. New lab chairs may be incorporated, and basins may be modernized.

12. The most northern lab next to the Biobank lab must be renovated. New cabinets and benches must be installed. Replastering and painting are essential. The laminar flow must be moved against a wall as well as all other equipment such as centrifuges and fridges. The wall-mounted glass cabinets must be replaced by modern cabinets. Energy-saving air conditioning must be installed, and water-saving taps and basins are required.

13. Parking area

- A carport should be built for staff and clients in front of the building.

14. All offices must be tiled and painted. This reduces the risk of allergies. Replace the walls with glass doors. Energy-saving air conditioning is essential. Modern blinds and energy-saving lighting must be installed.

15. Emergency exits. The wooden doors must be replaced by fire-resistant doors.

16. Garden

- A water-smart garden with small plants, succulents and shrubs must be installed along the building to create an inviting environment to clients and staff.

17. Jo-Jo tanks should be installed to retain rainwater to water the garden and for other uses. The gutter system will have to be optimized to provide the Jo-Jo tanks with running off water

18. Outside building:

- Plastering and painting of building is essential. A visible, quality board with the building's name must be installed on the front wall of the building for clients to identify the building.
- Overall, an informative map of the campus should be installed at both gates, showing the location of the various units.

19. The walk-in fridges and freezers should be refurbished or upgraded to maintain the correct temperatures for storage of samples, chemicals and consumables.
