#### General

### THE 80/20 PREFERENCE POINT SYSTEMS

Where

- Ps = Points scored for price of bid under consideration  
 Pt = Price of bid under consideration  
 Pmin = Price of lowest acceptable bid

1	20
2	18

7	4
8	2
Non-compliant contributor	0

## SECTION 4: SCOPE OF WORKS

### 1. INTRODUCTION / BACKGROUND

The Theewaterskloof Municipality is inviting tenders from potential suppliers for the supply, installation and commissioning of a Digital Mobile Radio (DMR) network and the supply of radio equipment to provide a communication within the towns and boundaries of the Theewaterskloof Municipality.

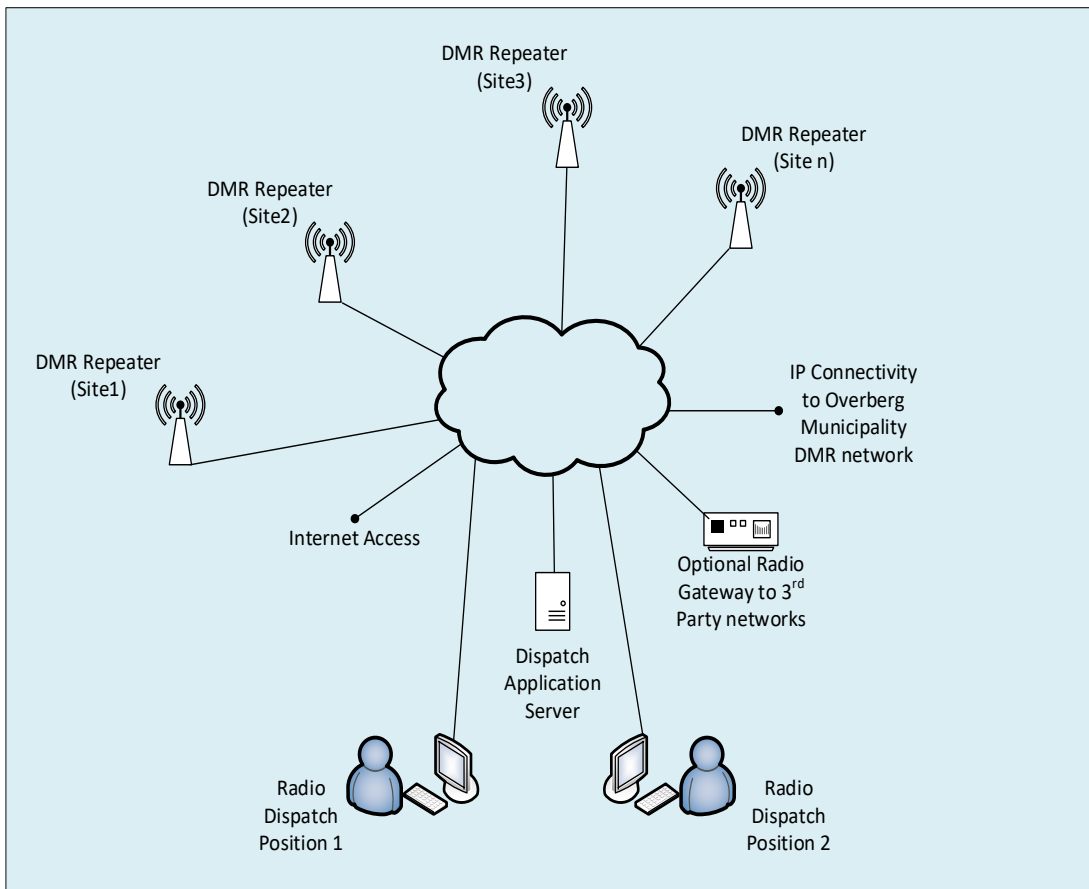

The proposed radio communication solution must provide mobile and portable two-way radio coverage across all the towns and areas within the Theewaterskloof Municipal area.

The towns included within the Theewaterskloof Municipal area are: Grabouw; Villiersdorp; Botrivier; Caledon; Tesselaarsdal; Genadendal; Greyton; Riviersonderend. It is mandatory that the successful bidder operate an office and technical support facility within 2hrs drive from the Theewaterskloof Municipality to allow for rapid support in case of technical issues. The successful bidder must operate an OEM certified workshop facility in the Republic of South Africa to service the offered radio equipment.

**The diagram below shows a high-level overview diagram for the requirement.**

Please note: - this is not the actual or final design but just a reference for the information to follow within this document.

**The actual number of DMR repeater sites, IP connection points, application servers, Gateway devices etc. will be determined by the bidder's proposal.**

**Figure 1. High Level Overview of DMR radio network**

## 2 SCOPE

### Required Radio Signal Coverage

It is a requirement that the radio signal coverage for portable radios must be 90% and 100% for mobile and desktop radios within the specified towns. A 90% signal coverage for mobile radios outside of the specified towns, but within the Theewaterskloof Municipality boundaries will be acceptable.

It is the responsibility of the supplier to design and propose a network to achieve the specified coverage performance. Their system design and pricing will be based on this.

As part of the submission, the bidder must include a combined radio coverage prediction study to show the theoretical level of coverage that their proposal will provide for both portable and mobile radios.

The bidder must identify and propose the number of repeater sites and most suitable locations to achieve the required signal coverage.

It is the responsibility of the supplier to prove the achieved level of signal coverage once the system is deployed.

The type of radios offered with this system will be used to verify the actual physical coverage performance of the system.

The achieved signal coverage levels will be verified by performing regular two-way radio checks throughout the coverage area and 90 out of 100 calls (as per the applicable case) per area must succeed with at least 4 out of 5 speech quality.

4 out of 5 quality means communication with little distortion or breakup and does not require a repeat of the message.

The initial radio network design must consist of a single DMR repeater at each of the proposed radio repeater locations.

### IP Connectivity and Equipment Hosting as a Service

The accommodation (site hosting) and IP interconnectivity between DMR repeaters must be provided by the bidder as a service.

All repeater site hosting and interconnectivity must be offered as a service for a 30 month period.

The bidder must provide as part of their submission to include the total pricing for all these services for all the proposed sites.

The services at all of the proposed radio repeater deployment locations must include but are not limited to:

- The secure accommodation of all radio repeater and supporting equipment.
- Stable electrical power and standby power for the repeaters and supporting equipment.
- Tower space for the proposed antenna system.
- Stable IP interconnectivity between all the proposed radio repeater locations with sufficient bandwidth and to sustain the interconnection of all the repeater sites.
- Stable IP interconnectivity between the proposed repeater sites and the central control room facility located at Caledon.
- Maintenance and support of all these services will be the responsibility of the supplier/bidder and cost for such must be included within the monthly cost.

The bidder is required to negotiate and acquire the services of subcontractors in order to provide a complete solution as per the above requirements.

### Frequency Requirement

The Theewaterskloof municipality do not own and/or is licensed for any frequencies to operate radio repeaters and it is a requirement that the successful bidder must assist the municipality with the preparation and submission of all relevant application documents required by ICASA to license the radio system frequencies.

It is accepted that the Theewaterskloof Municipality will be responsible for all licensing and application fees.

**Dispatch Subsystem**

The proposed solution must include a Dispatch and Control hardware/software application to monitor and dispatch radio users affiliated to the DMR radio network. The dispatch application must be integrated to the radio network at an IP level and requires the following functionality. The dispatch subsystem must be integrated into the DMR network and connected within the same IP network as the remote RF sites. The dispatch subsystem must thus have the capability to address the provided DMR repeaters directly over the IP network and not via a 3<sup>rd</sup> party interface or radio interface. The dispatch subsystem must consist of one or more application servers and a number of dispatch client computers hosting the dispatch client application.

**If the bidder fails to sign this schedule, it will be interpreted that the bidder does not comply with the Scope of Works and therefore will be regarded as being non-responsive.**

**I hereby declare that I comply with all the Scope of Works as set out above.**

**5. TECHNICAL SPECIFICATIONS**

5.1 The following technical specifications apply:

	<b>Dispatch Subsystem</b>			
SECTION				
High Level System Requirements

	Radio terminal devices, Mobile, Portable or Desktop, must operate within the standard 136MHz -174MHz Frequency band.			
	All equipment must be of the latest available technology.			
	To provide critical interoperability with neighbors, the proposed radio devices must be able to connect to the existing DMR network of the Overberg District Municipality by means of software configuration only.			
	The radio repeater network must be capable of being expanded to no less than 12 IP interconnected sites.			

	The radio repeater network must be capable of being expanded to allow for up to 4 DMR repeaters per site and to allow for these repeaters to be configured as a group of trunking repeaters. This will allow all the timeslot resources per site to be shared amongst a larger number of talkgroups and data message.			
	<b>DMR Radio Repeater Requirements</b>			
	Radio repeaters located at different geographical sites must be connected via IP connectivity to form a wide area interconnected radio network.			
	The product offered must have a cost-effective method to share the two communication slots of a single repeater amongst more talkgroups and users to effectively increase the optimal usage of that repeater. This function is often referred to as Pseudo trunking.			
	The network must be able to restrict certain Talkgroups from operating at certain sites.			
	The repeaters must have a means of authenticating radio users on the network to prevent and reject unauthorized radios using the network.			
	A diagnostic and control software application must be provided to monitor the health of all the radio repeaters connected within this network from a remote monitoring position.

	<b>DMR Radio Terminal Requirements (Mobile, Desktop and Portable Radios)</b>			
	Radio terminals must be able to initiate and receive <ul style="list-style-type: none"> <li>• Talkgroups Calls (One to Many type calls)</li> <li>• Private Calls (Authorized radios are allowed to make a One to One call to another radio)</li> <li>• Alert Calls (Authorized radios can send an Alert Call (Page) to other radios)</li> </ul> Send and Receive Text Messages			
	Radios should support both analogue mode and digital mode.			
	Portable radio terminals must be provided with a backlit multiline LCD			

	display and Alphanumeric Keypad.			
	Mobile Radios and Desktop Radios must be provided with a backlit multiline LCD display and an Alphanumeric Keypad microphone.			
	The radio unit must be capable of displaying the Alias of the transmitting radios and automatically updating the contact list as new aliases are received.

	Radios operating within this system must have the ability to work in Tier2 multisite trunking mode and in Pseudo multisite trunking mode. This feature must be configured via software programming.			
	All radio types offered must have a build in GPS receiver to allow GPS location information to be send to a Central Dispatching Server.			
	Terminals can poll direction and distance of another terminal with GPS.			
	Radios must have at least a basic level of encryption to prevent eavesdropping of radio conversations.			
	The radio users must also be able to send an emergency alarm to a dispatcher in case of an emergency. This alarm will create an audible and visual notification on the dispatcher map as well as the last reported GPS position.			
	The radios must be configured to allow it to be remotely de-activated and re-activated by an authorized radio user at the dispatching center.			
	The radio must be capable of working in digital direct mode to allow them to operate outside the Theewaterskloof coverage areas.			
	Each portable radio must be supplied with a high capacity rechargeable Lithium Ion battery of at least 2400mAh			
	Portable radios must be supplied with a spring-loaded belt clip.			
	Desktop radios must be installed into a professional purpose build enclosure housing the radio and power supply unit.

	Allow interconnection to other DMR or Analog radio networks via wireless gateway units.  The dispatching subsystem must have an optional gateway device that can be			

	connected anywhere inside the IP network and can interface to at least two analog radios. These radios can then be used to communicate with 3rd party radio systems and also be allowed to be patched via the dispatching system to the Theewaterskloof DMR talkgroups. Pricing for such a gateway unit must be allowed for in the bidder's response.			
	The dispatching subsystem must be directly connected via IP to the existing DMR radio network operated by the Overberg District Municipality (ODM). This must allow for patching of the Theewaterskloof DMR talkgroups to that of ODM. This must also provide the functionality to communicate with ODM radio users directly from the dispatch terminal. Pricing for licensing the interconnectivity to the ODM IP connected DMR network must be included in the offer.			
	The application server must be able to manage more than 1000 DMR radio devices. For the purpose of the submission, provide pricing for <b>25</b> radio terminal licenses.

MBD 9 – CERTIFICATE OF INDEPENDENT BID DETERMINATION**

- 1 This Municipal Bidding Document (MBD) must form part of all bids<sup>1</sup> invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
  - a. take all reasonable steps to prevent such abuse;
  - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
  - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
