TERMS OF REFERENCE:

APPOINTMENT OF SERVICE PROVIDER TO DEVELOP AN INTERGRATED GEOGRAPHIC INFORMATION SYSTEM (GIS) STRATEGY FOR THE NATIONAL DEPARTMENT OF HUMAN SETTLEMENTS WITHIN A PERIOD OF SIX (6) MONTHS.

NOVEMBER 2023

National Department of Human Settlements

**Chief Directorate: Sector Information Management Systems (IMS), Performance
Monitoring and Evaluation**

1. INTRODUCTION

The National Department of Human Settlements (NDHS) seeks to appoint a suitable service provider with an experienced team of experts in location based and spatially enabled system to develop and implement Geographic Information System (GIS) strategy, which will guide the department to procure suitable GIS system solution that will assist with planning (aligned with the Human Settlements programmes), identification, monitoring, analysis, evaluation, visualisation and progress reporting on human settlements projects.

2. BACKGROUND

Every object occurring on the earth's surface has a specific location, a geographic location regardless of being static or dynamic, and is therefore spatial information. Subsequently, everything that happens occurs somewhere, therefore imperatives for humans to know 'where' things are happenings. Knowing where people and things are, their location, and their relationship to each other, is critical to informed decision making. It is on this background Government now rely on comprehensive and accurate, location-based information to support strategic priorities, making decisions, and evaluating measuring and monitoring outcomes. Geospatial information technologies have therefore become critical tools to support national development, economic growth, improved decision-making, and policy direction.

Department of Human Settlements (NDHS) has for many years been utilising GIS technology through the use of basic stand-alone Esri ArcGIS system, operated by few specialists in the department. Although the resources and capacity is minimal or very little for a National Department such as Human Settlements, GIS has provided the National Department of Human Settlements with significant benefits such as the ability to visualise, analyse, evaluate and monitor current status of Human Settlements projects across the country. Currently Esri South Africa is a sole provider for ArcGIS system and tools in South Africa.

National Department of Human Settlements coordinate and facilitate the creation of integrated sustainable human settlements, through servicing of sites, construction of housing units, providing and issuing of title deeds, upgrading of informal settlements, collaborating with other state departments in delivering public amenities, and collaborating with entities and private sector for the development of the country nationally. This entails developing policies and legislation to promote integration in government development programs and service delivery. To achieve the above easy access to spatial information and technologies that can be used as tools to support spatial planning evidence-based decision making is necessary to the department.

GIS is not optimally utilised in the National department of Human Settlements, and the benefits of investing in it are not being fully realised, at present the GIS capacity is limited to the GIS staff, therefore it is in the backdrop of this, that a GIS strategy be rolled out and implemented for the entire department and its entities.

3. PROBLEM STATEMENT

- 3.1 It is the intention of NDHS to guide spatial planning and transformation to the best location for investment in human settlements, creating a national aligned with provinces and municipalities through a single project pipeline, complying with a set of criteria through the spatial investment framework that will call on stakeholders to collaborate and coordinate their operations to transform human settlements development in the country.
- 3.2 NDHS lacks the necessary infrastructure to utilise GIS planning support to improve, monitor and manage service delivery in the country.
- 3.3 NDHS need to locate, monitor, verify and analyse human settlements project information spatially.
- 3.4 NDHS needs to share and make available human settlements project information through a web-based platform for common reporting in the organisation.
- 3.5 NDHS lacks (although have) a central geo-database that can integrate with various information systems within NDHS and external stakeholders.

4. DEVELOPMENT INTENTIONS

- 4.1. With the history of using geo-spatial information and technology, and significant investment made in GIS data, as generated by numerous departments, and used in variety of map making, analysis and web viewing applications, there is still little use of GIS function in the department as well as lack of coordination, which leads to unfocused communication and duplication of efforts within the sector.
- 4.2. There is a great need to improve business processes to utilise GIS as a strategic planning tool within the department. The corporate GIS will aim to consolidate the GIS data management functions centrally at the national department and support provincial departments and entities of Human Settlements. In delivering on the corporate GIS model a lot of work will be required to be done in-house.

- 4.3. Service providers are hereby requested to develop a complete plan to assist with implementing the proposed model of corporate GIS service delivery. The strategy proposal must cover all aspects of corporate enterprise GIS; detailed needs assessments, design of technology, detailed database management plan, personnel plan, situational and data/tool gap analysis as well as the roll out plan of the corporate GIS building on the existing systems.

5. PROJECT OBJECTIVES

- 5.1. To assess the value that GIS is currently adding to the organisation and make recommendations thereof.
- 5.2. To take stock of the existing GIS database and analyse the data gap.
- 5.3. Assessment of the Department GIS needs and expectations in order to inform this strategy and present situation.
- 5.4. To promote GIS awareness and marketing of the GIS services to various users within the department.
- 5.5. Conduct and document user requirements for human settlements spatial data needs.
- 5.6. To promote GIS data accessibility to relevant users to inform planning processes and decision making.
- 5.7. To strategize on how best to satisfy the Corporate GIS requirements of the National Department of Human Settlements.
- 5.8. To recommend personnel resources requirements to support the model.
- 5.9. To support GIS steering committee/ team that will guide the process through regular meetings and interactions.
- 5.10. To align the GIS strategy with the next Medium Term Strategic Framework (MTSF) priorities.
- 5.11. To make recommendations on how to upgrade the current GIS environment to an Enterprise GIS that is fully integrated and ensures that the GIS delivers on the overall Departmental requirements.

6. PROPOSALS

Service providers will be expected to submit proposal with at least the following:

- 6.1. A gap analysis on data, configuration, access, systems, and services (management data requirements and tools).
- 6.2. Clear project methodology and planning process to be followed.
- 6.3. Clear project budget aligned to tasks or activities.
- 6.4. Clear project activities schedule to complete the project in 6 months.
- 6.5. A system design on the proposed technological solutions with a report on how this will be implemented.

- 6.6. A detailed database management plan, including who will capture and maintain what data and when.
- 6.7. Proposed training plan considering budgetary constraints and existing personnel.
- 6.8. Production of a multi-year roll out plan of the corporate GIS and GIS strategy.
- 6.9. A report that details all of the above and that will serve as the multi-year GIS Plan in the department.
- 6.10. It must be emphasized that the National Department of Human Settlements is requiring a practical and manageable GIS Solution that will address all critical GIS functions in the department and provide strong support particularly to all branches within the Department, Provinces, and Entities to take stock of the existing GIS database and analyse the gap.
- 6.11. To prepare a proposal to integrate GIS data with other database housed within.

7. METHODOLOGY

The service provider must propose an appropriate method suitable to conduct the development of a strategy study (in this case GIS strategy).

7.1 Literature Review

The purpose of the literature review is to establish conceptual frameworks that will contextualise the aspects of:

- i. GIS programme, which must consist of variety of topics that are relevant to the strategy development study.
- ii. Strategy types that is suitable for GIS: the service provider must elaborate on the understanding of development and implementation of GIS strategy study.
- iii. Suitable methodological approaches that may be adopted for conducting such study.
- iv. Propose methodology to conduct this strategy study.

7.2. Sampling methodology

As part of the methodology, the service provider must propose a scientifically sound sampling method and stakeholders that can form part of the sample.

The output for this component is a chapter in the literature review report

- ii. An analysis of the institutional arrangements that are in place with regards to location of GIS unit, to determine the effectiveness and efficiency of these arrangements and elevate any gaps which may exist in the system that requires improvements.
- iii. An analysis of standard operating procedures that must be followed in the implementation of GIS to determine whether these processes and procedures comply with policy prescripts and programme objectives and whether the utilisation of GIS comply with policy prescripts and programme objectives.
- iv. An analysis of the legislative prescripts for budgeting (Division of Revenue Bills), the Annual performance plans, the quarterly and annual reports of institution in order to determine whether there is value for money in the utilization of GIS through acquisition of certain resources or implementation of certain capacity development programmes. The output of this component is a chapter in the literature review report, and a chapter in the data collection exercise and a detailed finding report for this component.
- v. An Analysis of the performance indicators of the GIS programme to determine whether these are suitable for the stated purpose of the programme. An output for this exercise will result in a chapter that will review of the theory of change in the programme design to understand the inner logic of the programme. In the absence thereof this must result in the proposal of theory of change suitable for the programme.
- vi. A data validation exercise that will validate the collected data from the respondents that will confirm the final outcomes of the data collection exercise. The output of this is the data collection and data validation workshop.
