NOTES			
Note 1. This density is realised at the operating pressure and at the minimum temperature conditions of 40 °C that can be expected in the event that the upstream Electrical Heater H83127 is faulty.			
Note 2. These volumetric flowrates are obtained by taking the product of the line velocities obtained in [4] with the cross-sectional area for a 100 NB pipe.			
Note 3. Inspection and testing shall be done in supplier facility.			
Note 4. Gas composition (% w/w) is 0.32% CO ₂ , 0.17% HF, 34.83% O ₂ and 64.68% N ₂ at the minimum flow rate, and 79.06% CO ₂ , 0.04% HF, 7.32% O ₂ and 13.59% N ₂ at the maximum flow rate.			
Note 5. Two HEPA filters F83128A&B and F83129 are installed upstream of the blower			
Note 6. A moisture trap Y83153 is installed in the suction line upstream of the blower.			
Note 7. Inspection and testing shall be done in supplier facility.
