

Scope of Works

Sentech require DD3300 cloud tier - 64TB capacity license. With OEM Prodeploy services only, not “supplier implementation” services.

1. The deployment will serve as an actual test of the configured Mtrees for archiving and will not be limited solely to license deployment.
2. Execution of the deployment (Prodeploy services) will be deemed complete upon successful demonstration of an active replication.
3. Note: The support and maintenance of DD3300 cloud tier should align to the existing DD300 support and maintenance.
