SECTION 3: BACKGROUND, OVERVIEW AND SCOPE OF REQUIREMENTS

1 BACKGROUND

The Voice Recorder System is used to govern train operating communications and ensures all safety processes and procedures are being adhered to and is a requirement from the RSR (SANS 3000-2-4). These recorded voice logs are especially important during investigations wherein an incident (train collision, train derailment) has occurred, in such situations a centralized solution is required in order to mitigate the possibility of human tampering. The system being used currently was installed in 2012 and was designed to record analogue and digital communication.

The current voice recording system is obsolete with no spares available for maintenance. The components of which the solution is comprised have become outdated, making support and maintenance highly complex. Various challenges pertaining the current voice recorder systems, ranges from obsolescence to inability to support current and future train operation recording requirements and are summarised below:

- The voice recorder infrastructure has met its end of life and is no longer supported by the OEM.
- The voice recorders do not support centralization of voice log files, which creates discrepancies when incidents occur, and voice logs have disappeared.
- The voice recorder infrastructure/material can only be sourced from one supplier. It is near impossible to buy spares as a confinement is sought and due to high prices, the confined voice logger modules cannot be procured.
- The inability to support the VOIP applications as a new and future requirement based on the digital backbone network that is currently being installed.

Additionally, the Railway Safety Regulator (RSR) requires TFR to record all voice communication/authorization between the train control officer (TCO) and the train drivers at Train Control Centres (TCC) as per regulation SANS 3000-2-4. The intended upgrade is sought to curtail the challenges stipulated above and also to bring in additional opportunities to facilitate technology and strategic requirements in order for TFR Rail Network to have more control on the deployed technologies and associated development / evolution stages.

2 EXECUTIVE OVERVIEW

Whereas Transnet is seeking a partner to provide solutions for its voice recorder systems and associated accessories intended for the upgrade of currently installed system across Transnet Freight Rail's Centralised Train Controls nationally, it also seeks to improve its current processes for providing these Goods/Services to its end user community throughout its locations.

The selected Service provider must share in the mission and business objectives of Transnet. These mutual goals will be met by meeting contractual requirements and new challenges in an environment of teamwork, joint participation, flexibility, innovation and open communications. In this spirit of partnership, Transnet and its Supplier/Service provider(s) will study the current ways they do business to enhance current practices and support processes and systems. Such a partnership will allow Transnet to reach higher levels of quality, service and profitability.

Specifically, Transnet seeks to benefit from this partnership in the following ways:

- 2.1** Transnet must receive reduced cost of acquisition and improved service benefits resulting from the Supplier/Service provider's economies of scale and streamlined service processes.

- 2.2** Transnet must achieve appropriate availability that meets user needs while reducing costs for both Transnet and the chosen Supplier/Service provider(s).
- 2.3** Transnet must receive proactive improvements from the Supplier/Service provider with respect to supply/provision of Goods/Services and related processes.
- 2.4** Transnet's overall competitive advantage must be strengthened by the chosen Supplier/Service provider's leading edge technology and service delivery systems.
- 2.5** Transnet end users must be able to rely on the chosen Supplier/Service provider's personnel for service enquiries, recommendations and substitutions.
- 2.6** Transnet must reduce costs by streamlining its acquisition of Goods/Services, including managed service processes on a Group basis.
