- Annexure C – Technical Service Requirements
- Annexure D – Technology Diagram and Architecture
- Annexure E – Other chargeable items

SCT 14 EVALUATION PROCESS

The evaluation process will follow four stages as outlined below:

- a) Mandatory Requirements
- b) Technical Evaluation
- c) Functionality
- d) Price, Preference Points with Specific Goals

14.1 Mandatory Requirements

- a) The solution must be listed by any Rating Agency. The bidders must provide a copy of a product rating report proving the rated strength of the proposed solution. eThekwini Municipality reserves the right to verify the rating reports submitted by the bidders which may lead to disqualification of the offer submitted by the bidder. Refer to Annexure A
- b) Bidders are to complete and submit Annexures B, C, D and E as part of the tender submission.
- c) A minimum of three contactable project/reference sites with Audit Software System Implementation in any municipal/government/environment similar to eThekwini Municipality must be provided. Tenderer must attach an official letter from each reference site confirming the successful implementation of that project, during the past 5 years, to the scope similar to this tender. The description should be put in tabular form under the following headings:

NAME AND ADDRESS OF EMPLOYER	CONTACT PERSON(S) AND TELEPHONE NUMBER OF EMPLOYER	PROJECT TITLE	NATURE AND DETAIL OF WORK UNDERTAKEN	VALUE OF WORK (inclusive of VAT)	DATE UNDERTAKEN AND COMPLETED	EMPLOYEE HEADCOUNT

Scope similar to this tender, refers to the provision of **Internal Audit Software Tool*

Note: Bidders who fail to submit all the compulsory mandatory requirements will be deemed non-responsive to this tender and will not proceed to the next evaluation stage.

14.2 Technical Evaluation

1. Functional Technical Requirements (305 POINTS) - Annexure C

The requirements in this section will be used by the bid evaluation committee to evaluate the bid. Therefore, each piece of substantiating evidence must be cross-referenced in Annexure C to the embedded spreadsheet containing 61 line items (3 tabs) for evaluation.

- (a) The functional technical requirements questions are there to ascertain the level of the Bidder's function, capability and maturity. In order for the service to work acceptably and deliver the outcomes that eThekweni desires, the Bidder's service must have the capability and maturity to fulfil at least 85% of the functional technical requirements. This means Tenderers must score a minimum of 259 (85%) points in order to qualify. If a Bidder scores less than 85% overall for functional technical requirements, then that shows its proposed service does not have the level of capability and maturity to fulfil this contract, and that their functional technical requirements is not at a level that is acceptable. **Tender offers that fail to score the minimum number of technical evaluation points will be rejected as non-responsive**
- (b) The bidder must complete in full, all of the FUNCTIONAL TECHNICAL REQUIREMENTS.
- (c) The bidder must provide a unique reference number (e.g., page, binder/folio, chapter, section) to locate substantiating evidence under Annexure C in the bid response. During evaluation, eThekweni Municipality reserves the right to treat substantiation evidence that cannot be located in the bid response as "NOT COMPLY".
- (d) Substantiating evidence must be succinct and relevant to the evaluation question. Irrelevant responses and documentation will not be assessed.
- (e) Evaluation per requirement. The evaluation (scoring) of bidders' responses to the requirements will be determined by the completeness, relevance and accuracy of substantiating evidence. Each FUNCTIONAL TECHNICAL REQUIREMENT will be evaluated using the following scoring system:

Evaluation criteria	Score
Non-Compliant (meets none or less than 30% of the requirement or there is no substantiation)	0
Partially Compliant (meets at least 60% of the requirement and there is substantiation)	3
Fully Compliant (meets or exceeds 100% of the requirement AND some additional requirements and there is substantiation)	5

- (f) The bidder could score anything between 0 and 5 points and for this reason we have a rating to enable the evaluators to measure the Bidder's capability. The points are added up and calculated to provide a percentage score out of 70 points to determine whether the Bidder is below or above 85% overall.

- (g) **Calculating the threshold:** In this section, there are a total of 61 questions. All questions carry the same weight. If the Bidder were to get full points i.e., 5 points per answer, the calculation is: 5 points x 61 questions = 305 points which is the equivalent of 100%.

However, not everyone will get full points per answer, and they may get any number between 0 and 5 so. Therefore, to determine the final score for each bidder, the evaluators will simply add all the points and then calculate the percentage out of 305 points, i.e. %score = (total points achieved) ÷ 305 × 100

The table below demonstrates the scoring: demonstrate how could score, with the former qualifying and the latter not meeting the threshold.

Service Functional Requirements	Max Points	Max %	Min Points	Min %
TOTAL	305	100%	259	85%

- (h) **Minimum threshold:** To be eligible to proceed to the next stage of the evaluation, the bidder must achieve a minimum threshold score of 85% overall (305 points).

PRICE POINTS: A maximum of 80 or 90 points is allocated for price on the following basis:

80 / 20 Points System

OR

$$P_s = 90 \left(1 - \frac{P_t - P_{min}}{P_{min}} \right)$$

Where:

P_s = Points scored for price of tender under consideration

P_t = Price of tender under consideration

P_{min} = Price of lowest acceptable tender

4.0 POINTS AWARDED FOR SPECIFIC GOALS

- 4.1 In terms of Regulation 4(2); 5(2); 6(2) and 7(2) of the Preferential Procurement Regulations, preference points must be awarded for specific goals stated in the tender. For the purposes of this tender the tenderer will be allocated points based on the **points claimed** for the goal(s) stated in **Table 1** below, as supported by proof/ documentation stated in the **Conditions of Tender**:
- 4.2 In cases where the municipality intends to use Regulation 3(2) of the Regulations, which states that if it is unclear whether the 80/20 or 90/10 preference point system applies, the municipality must, in the tender documents, stipulate in the case of:
- (a) an invitation for tender for income-generating contracts, that either the 80/20 or 90/10 preference point system will apply and that the highest acceptable tender will be used to determine the applicable preference point system, or
 - (b) any other invitation for tender, that either the 80/20 or 90/10 preference point system will apply and that the lowest acceptable tender will be used to determine the applicable preference point system,

then the municipality must indicate the points allocated for specific goals for both the 90/10 and 80/20 preference point system.

TABLE 1: Specific Goals for the tender and points claimed are indicated per the table below.

Tenderers are to indicate their points claim for each of the Specific Goals.

SECTION 7: SCOPE AND SPECIFICATION OF REQUIRED SUPPLY / SERVICES

INTRODUCTION

eThekwini Municipality seeks to appoint a service provider that will supply internal audit software with MSCOA configuration, licensing, maintenance, and support over a period of 36 months.

The eThekwini Audit and Risk Assurance Services unit, hereafter referred to as the Internal Audit department, has traditionally followed manual audit processes, spending countless hours preparing work papers and audit reports along with associated documentation. With increased workload, the department has identified significant challenges such as audit inefficiencies, errors, unreliable reporting, redundant efforts, inflated costs, and data inaccuracies. Disintegrated audit processes, lack of collaboration between the departments, manual and inefficient follow-up on action items, and time-consuming data gathering processes all translated into limited reporting and data analysis. An increase in regulatory, legal, and risk management obligations further stress the need for an Integrated Audit Management Solution.

BACKGROUND

EMARAS utilized an automated computerized audit software solution called MetricStream to manage the audit processes, however due to the product not meeting the future needs of the unit, the solution has therefore been decommissioned as to not incur future fruitless expenditure.

EMARAS has gone back to the traditional/manual ways to facilitate the audit processes, spending countless hours preparing working papers and audit reports alongside other associated audit documentation.

EMARAS has identified significant challenges ranging from audit inefficiencies, redundant reporting efforts. Disintegrated audit processes, lack of collaboration amongst various remits and client departments, lack of a uniform approach to storing and securing audit files, inefficient follow-up on action process, and time-consuming data gathering process have all been translated into identified challenges.

Furthermore, an increase in regulatory, legal and risk management obligations further compound the need for an integrated approach that can only be facilitated by implementing computer-based audit software. An example of such regulatory requirement is the MSCOA Circular 80.

KEY BUSINESS OBJECTIVES

The workload on the Internal Audit department is overwhelming. Auditors are not only required to capture and store more detailed information in manual work papers and provide more frequent and complex reports to a senior audience, but to expand their scope to include risk assessment and compliance. Manual audit processes simply do not empower internal auditors to meet these demands with efficiency or time and cost

effectiveness. The reality is that Internal Audit cannot successfully meet expectations and perform at a new level without doing things differently and the efficient and effective use of technology is essential for Internal Audit to succeed in its evolving mandate.

A comprehensive internal audit solution will optimise the core internal audit disciplines and provide support for the multiple disciplines of Governance, Risk and Control (GRC) - internal audit, financial controls management, enterprise risk management, operational risk management, IT governance, and compliance. The solution will provide greater efficiency, improved collaboration, and will reduce the time and resource costs associated with GRC processes. The technology is essential if Internal Audit is to live up to its role of bringing a systematic, disciplined approach to evaluating and improving the effectiveness of risk management, control and governance processes.

A well-integrated solution will provide a common set of functionality for each internal audit process owner with shared functionality for common activities such as risk assessment, process documentation and issue tracking. Leveraging a shared data model, a well architected solution will enable the consistent sharing of definitions and terms, organizational reporting structures, and relationships between controls and the associated audit results. Eliminating the redundant efforts will save money by minimizing time to execute, improving accuracy and enhancing collaboration, efficiency and consistency.

The requirement to automate the audit process is in line with the Municipality's goals of ensuring a strong, caring and democratic institution to promote and support a consultative and participatory local government as well as to maximise the City's financial resources to ensure long term financial viability and sustainability. The automation of audit processes will assist to fulfil Internal Audit's mandate of providing independent, objective assurance and consulting services designed to add value and improve the municipality's operations in a cost-effective and efficient manner.

The objective of the new system is to implement a fully integrated Internal Audit Software, with MSCOA processes configuration, that meets business requirements and offers mobility to all users, including deskless users and achieve the following:
