Where:

Ps = Score for the Bid under consideration

Pt = Price of Bid under consideration

$Pmin$ = Price of lowest acceptable Bid

$$PS = 80 \left(1 + \frac{Pt - Pmax}{Pmax} \right)$$

1 Overview of the works

1.1 Executive Overview

Bulk terminals handle bulk commodity through the utilization of tipplers, conveyer belts and associate equipment. S07 conveyor plays a crucial role on tippler1 and 2 routes as it is the last conveyor on the magnetite route selection, and it consists of major mechanical and electrical components which ensure the operation of the route namely; the drive system (induction motor, hydraulic coupling and gearbox).

These components are selected in design based on the load capacity that the commodity is expected. This VSD will assist in varying and selecting the speed of the conveyor belt, the drive will also minimize the blockages caused by momentum when the route stops by controlling ramp down/ deceleration times. It has been observed that this drastic change in commodity property occurs when the cargo is wet and as a result the drive system experiences an overload. To remedy this problem the terminal has decided to upgrade the direct online system to variable speed drive type of system.

NB: Any deviation from the scope needs to be authorised by engineering manager before the work is performed.
