SCOPE OF WORK: RFQ 201150: APPOINTMENT OF SERVICE PROVIDERS FOR THE SUPPLY AND DELIVERY OF HIGH PRECISION THREE PHASE POWER ANALYSER WITH ADDITIONAL CHANNELS.

7.1 PURPOSE OF THIS DOCUMENT

Short description of the business being done, its context, and the reason for the project. Also describe the work that the SABS intends to do with the delivered product:

The High precision 3-phase power analyzers are used to measure current, voltage and calculates combined power during temperature-rise testing on a range of 3 phase electrical distribution equipment. These systems provide bandwidth from 3 MHz to 10 MHz for reliable measurement precision. The unit which was previously bought when the temperature laboratory was opened has recently burned due to double phasing from utility supply which was followed by power outage during distribution transformer testing. This resulted in three phase channels burning cards and PCB boards of the instruments which are key to measurements of the systems. Due to the failure of instrument in the laboratory we currently do not have a 3-phase power analyzer with high precision capable of measuring currents and voltages and displaying power voltage with harmonics up to the 40th. We therefore require a new system with backup additional channels system to enable us to reliable do temperature rise testing on a range of electrical distribution equipment.

7.2 APPLICABLE AND REFERENCE DOCUMENTS

List any references that may be important to the complete understanding of this technical specification:

Power analyzers are used to measure currents, voltages and calculate power in electrical distribution systems. Applicable methods for temperature rise where instrument will be mainly used are stated below:

The following standards are some of the applicable specifications:

SANS / IEC 61439 series of standards

SANS / IEC 60947 series of standards

SANS 780

SANS 10142

SANS 62271 series of standards

The main feature of power analyzer providing the highest bandwidth on the market, the power analyzer is the ideal test and analysis tool for the development of frequency converters and lighting equipment. Our experience has shown us that a power analyzer with additional terminal is needed in the laboratory to ensure continuity of operation in cases where one terminal fails to during operation. We therefore seek to have a 3-phase power analyzer with additional channels in order to ensure testing in the temperature rise plant continues effectively without the risk on not concluding testing due to equipment failure during testing.

7.3 REQUIREMENTS

Provide set of specific requirements *to be satisfied* by the material, design, product, or service to be procured for this project:
