### **Fixed ZAR Option (Payment Method 3)**

This option is available to those tenderers who are the direct importers of the goods/services for which they have tendered, but do not find Payment Methods 1A, 1B or 2 and allows tenderers to be responsible for the foreign currency and exchange rate risk. - Eskom and the successful tender will engage, on a simultaneous basis, with their respective bankers and compare the exchange rate/s obtained. This is done to ensure that any exchange rate/s used is/are market related.
- Tenderers will be required to match or better the exchange rate/s obtained by Eskom. If the tenderer's exchange rate/s is/are more expensive than the exchange rate/s indicated by Eskom, the exchange rate/s to convert the foreign values into ZAR will be the Eskom exchange rate/s.
- Once the exchange rate/s has/have been agreed by both parties, Eskom will not be liable for any further exchange rate adjustments.

**From a Commercial perspective, please take note of the following:**

- The foreign currency and foreign currency amount/s that Eskom is/are at risk to, need/s to be indicated in the pricing schedule submitted as part of the tender. If the pricing schedule does not allow for it, the foreign currency and foreign currency amount/s must be indicated in a covering letter.
- The exchange rate to be used in the tender submission is the exchange rate sourced from the South African Reserve Bank on the date the tender is advertised/published.

**Take note of the following:**

**Service-related payment:**

When specialist skills are required in South Africa, the local supplier will source the appropriate talent from their network of specialist companies overseas. The specialist is then brought into the country (South Africa) on one of two possible methodologies.

**1) Secondment**

In this approach, the foreign specialist retains their employment contract with their home unit (Employer overseas) but are seconded to the local company that has a contract with Eskom to work under the direction and control of the local management. Their salaries are paid to the foreign specialist by their home country and that foreign entity then invoices the local supplier (South Africa) in foreign currency for the cost relating to such employees. The invoices would typically be in Euro or GBP, this methodology is usually for short to medium term engagements.

**Documents to be attached for payment:**

- Commercial invoice from the specialist company
- Local invoice (South African company making use of the specialist services)
- Passport of the specialist and valid work permit
- Activity schedule signed by the contract manager.

**2) Payroll Transfer**

In this approach, the employee's contract with the overseas employer will be suspended and the specialist takes up a local contract with the local company. The remuneration is then **ZAR** based, the overseas employer is unable to provide the foreign invoice because the employment with the specialist is suspended this methodology is usually favoured for long term engagement. There is no foreign commitment, and the contract will be in ZAR.

**PART 2: EXCHANGE RATES**

The tenderer shall use the exchange rate as at 12H00 on the date of the advertisement of the tender. The source of the exchange rates shall be the South African Reserve Bank ([www.resbank.co.za](http://www.resbank.co.za)) Please note that the tenderer is required to submit proof of the SARB rate/s used.

## ANNEXURE L

# SCOPE OF WORK – ENKOVUKENI SOLAR HOME SYSTEM PROJECT

### Project Scope Definition

The solution shall be designed to supply power each of the 54 households at eNkovukeni Village within an island located in Northern KwaZulu Natal. The expected output of the solar PV is 5kW.

The scope shall consist of but not limited to:

- Design, manufacture and install a standalone carport structure using either galvanized steel or treated wooden poles, engineered to support the weight of solar panels, as well as accommodate the inverter and battery enclosure. The design must ensure that the maximum possible PV capacity is installed per household.
- Install solar panels with a total output of up to 5kW, including a matching inverter and battery system.
- Provide a secure kiosk to house inverters, batteries, and other electrical components that can be mounted on the solar PV support structure.
- Install LV pole-top box, cabling, and smart metering as per Eskom standards.
- Recommended meter: BS Footprint Single Phase Smart Split Meter with CIU and External GSM Modem per household.

### Geographical overview of the project

Enkovukeni Village is an islanded community located in Northern KwaZulu-Natal. The area remains largely unelectrified, with limited access to electrical power. In addition to 51 households, the village is home to a primary school and a technology hub, both of which serve as vital resources for the local residents.

The location of the village within Kwazulu-Natal is shown in figure 1, below.

**Figure 1: Geographical Overview of Enkovukeni**

Enkovukeni Village is situated within the iSimangaliso Wetland Park, a designated World Heritage Site. As a protected area under the National Environmental Management: Protected Areas Act (Act No. 57 of 2003), any engineering or infrastructure development within the village must comply with a rigorous environmental approval process. This ensures full adherence to all relevant environmental legislation and safeguards the ecological integrity of the site.

**Typical Dwelling on the project site**

The village features a mix of traditional mud and reed houses, as well as brick and block structures. Residential yards are typically shaded by trees, and the soil composition is predominantly sea sand, characteristic of coastal dune systems. Enkovukeni is surrounded by undisturbed forest, contributing to its ecological sensitivity and reinforcing the need for environmentally conscious development.

### **Environmental considerations**

Several site visits have been conducted in Enkovukeni Village by various stakeholders. During these visits, a diverse range of vegetation types was observed, highlighting the area's rich biodiversity and ecological sensitivity. While the list of identified vegetation is not exhaustive, it provides insight into some of the potential environmental challenges that must be addressed in any electrification project. These findings emphasize the need for comprehensive environmental assessments and strict compliance with all applicable legislation and conservation requirements.
