2. INTRODUCTION AND BACKGROUND

2.1. INTRODUCTION

2.1.1 The FSHS intends to utilize the services of relevant qualified and experienced database of contractors, manufacturers and developers for the roll-out of innovative building technology to speed up the service delivery of the Breaking New Ground (BNG) houses in the Free State.

The FSHS is considering the use of innovative building technology as an efficient and effective alternative, with a variety of benefits, inclusive of the following:

- ✓ Improved rate of construction;
- ✓ Reduced labour costs;
- ✓ Improved energy efficiency with higher R-value of walls and
- ✓ Low maintenance.

3. WHAT ARE IBTs/ABTs AND WHAT IS THEIR PURPOSE?

The purpose of this tender is for the service provider to design, manage and construct homes using innovative/alternative building technology that provide relevant benefits as compared to standard brick and mortar. These benefits must be validated to justify the use of the system for a specific project. The FSHS will use IBT/ABT as a method of solving typical issues encountered with government subsidised homes. It will be used to improve some or all of the following factors:

- ✓ Economics (market value, upfront costs, life cycle costing);
- ✓ Construction (rate of construction, ease of construction and lower maintenance);
- ✓ Environmental (energy efficiency, embodied energy and less waste); and
- ✓ Social (social acceptability).

Although the construction industry interchangeably uses the terminology of either alternative or innovative building technology to describe the new technology of a building, this tender focusses on the term IBT, which is more inclusive of all innovation in artefacts or processes. It is also stipulated in the Housing Consumers Protection Measures Act of 1998 (No 95 of 1998), as amended, what non-standardised construction means to which IBT relates, which is defined as any form of building that utilises building systems, methods, materials, elements or components which are not fully covered by existing standards and specifications or codes of practice and/ or which are not described or referred to in “deemed-to-satisfy” rules of the National Building Regulations

IBTs are also often contrasted with conventional/standard building systems, which can be defined as a building system, method, materials, elements or components, which are fully covered by existing standards and specifications or codes of practices. An innovation can for example include a standard material but has an innovative method of putting it together.

IBTs must be certified by Agrément South Africa and can include products or systems, relating to foundation, wall, roof and services. The Agrément certification will validate the system in terms of:

- Performance (fire, structure, water penetration, and rising damp);
- Habitability (thermal performance and energy usage, condensation, acoustics & durability) and
- and the Quality Management System.

When compared to conventional building systems (brick and mortar, light steel frame structures and timber buildings according to standards) the innovation in the home should provide benefits for which proof must be provided by the bidder.

There is no restriction to the number of typologies the bidders may submit, each proposed typology must be appropriately named, referenced and documented and must be in compliance with all environmental and municipal legislative and infrastructure related dependencies. Bidders must articulate any conditions precedence including but not limited to the apportionment of risks and obligations between the FSHS and the service provider/manufacturer.

4. LOCATION

The programme and/or projects will be located in different Municipalities in Free State Province.

5. GENERAL REQUIREMENTS

The bidder must adhere to the following general requirements:
