## **CERTIFICATE OF INDEPENDENT BID DETERMINATION**

- 1 This Municipal Bidding Document (MBD) must form part of all bids<sup>1</sup> invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *per se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
  - a. take all reasonable steps to prevent such abuse;
  - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
  - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.

This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging. In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

## SPECIFICATIONS

### SUPPLY, DELIVERY AND OFF-LOADING OF THE ARC FLASH RESISTANCE PPE FOR THE ELECTRICITY DEPARTMENT ON AS AND WHEN REQUIRED BASIS FOR A PERIOD OF THREE YEARS.

#### 1. Background

Electrical faults may occur due to failed insulation, accidental contact with live systems, circuit breaker failure, human error and by energizing systems of faulty circuits. Electrical faults could result in an internal electric arc exposing authorized persons to extreme arc temperatures, forces and may result in molten projectiles and shock waves. Electrical faults cannot be ruled out during switching or maintenance operations and it is therefore essential that authorized persons be trained and supplied with personal protective equipment and clothing for protection against possible thermal hazards of an electric arc.

#### 2. Scope

This contract calls for the supply, delivery and off-loading, of the Arc flash Resistance PPE suits and safety shoes and boots for Lesedi Local Municipality on an as and when required basis for a period of three years.

#### Purpose

The purpose of this document is to prescribe the bid specification requirements for all personal protective clothing used within LLM: Electricity Department.

**It is also a requirement that the successful bidder/s will be requested to provide a complete set of clothing (including embroidery) for approval and only on approval, be requested to supply the approved products as and when required.**

#### 3. Normative references

The following legal requirements and standards contain provisions that, through reference in the text, constitute requirements of this specification. At the time of publication the editions indicated were valid. All standards are subject to revision and all bidders bidding on this specification are requested to investigate the possibility of revisions to the documents in order to ensure that they comply with the most recent editions of the documents listed below. ## 5.6 Design requirements for garments

- 5.6.1 Garments shall comply with the requirements of Clause 7 of this document.
- 5.6.2 The garment shall be designed in a way, that it does not influence or hinder the wearer performing work.
- 5.6.3 Garments protecting the upper part of the body shall have long sleeves.
- 5.6.4 Fasteners of the garment shall be designed in a way that opening function is still present and operational after being exposed to an electrical arc.
- 5.6.5 Thread, fasteners, findings, embroidery and closures used in garment construction shall not contribute to the severity of the injuries to the wearer in the event of an electric arc.
- 5.6.6 No exposed external metal shall be permitted in the clothing. If internal metal and/or melting parts (e.g. fasteners, buttons, and accessories) are used they shall be covered to the inside to avoid skin contact.
- 5.6.7 Sewing thread utilized in the construction of garments shall be made of an inherently Arc flash resistant fibre and shall not melt when tested at a temperature of 260 °C.
- 5.6.8 Non-melting underwear (e.g. cotton, silk, rayon and wool) or other thermal protective clothing shall be worn underneath the tested garment.
- 5.6.9 The ATPV of a garment system is determined by the lowest ATPV of any single or multi-layered component or components.

(Example: A garment system consisting of a 20 cal/cm<sup>2</sup> hood, 40 cal/cm<sup>2</sup> jacket and 25 cal/cm<sup>2</sup> trousers shall have an ATPV of 20cal/cm<sup>2</sup>).

**5.6.10** Any single garment item shall be constructed from the same ATPV fabric.

(Example: The sleeves, front, back and collar of a jacket shall be manufactured from a fabric with the same ATPV).

**5.6.11** It is a requirement that the garment shall withstand at least 150 washing and drying cycles without influencing the original specified arc rating. The manufacturer shall specify the minimum number of washes and drying cycles for which the arc performance of the garment will adhere to the requirements of this specification. The LLM laundering cycles will not be in keeping with the requirements of the care labelling and special washing instructions from the manufacturer as each person issued with such clothing will be responsible for the care taking of the garment. It is therefore important that the original arc rating cannot be washed away by any laundering method for the required minimum of 150 washes.

The supplier must provide confirmation in writing that the garment will be able to be subjected to a minimum of 150 uncontrolled washes without reducing the original arc rating of the garment, failing which the bid will not be considered for this item.

**5.6.12** All garments exposed to an electric arc flash shall be withdrawn from service.

## **5.7 Sizes range of protective clothing**

The range of protective clothing shall be sized in accordance with the requirements of SANS 434.

# **6. Marking and care – labelling**

**6.1.2** Markings shall comply with SANS 1309 and SANS 10011. Information shall be in legible and indelible block letters of height at least 3 mm.

**6.1.3** The following information shall be included as a minimum on the label secured on the top, inside, centre back:

- Manufacturer's name or trademark
- Year of manufacture
- Size designation
- ATPV value
- Care labelling instructions
- Number of Washes

**6.1.4** For arc flash clothing, the ATPV designation applicable to the material shall be visibly indicated on all components of the suit.

**6.1.5** Written proof of compliance to the relevant specification must be provided by the successful bidder.

### **6.3 Tests**

In addition to the requirements of the relevant Standards, the following tests shall be successfully performed on the protective clothing, personal protective equipment and the integrated headgear:

**6.3.1** Fabric for the electric arc garments shall comply with the requirements of IEC 61482- 1-1.

**6.3.2** The complete garment shall be subjected to tests as specified in IEC 61482-1-1.

**6.3.3** The garment construction shall be inspected visually for the following design properties:

- Long sleeves,
- No outside metal parts,
- No uncovered internal metal and/or melting parts,
- All parts made of arc thermal resistance material,
- Identical arc thermal resistance performance of front side and complete sleeves.

**6.4** The integrated headgear shall be tested in conjunction with the complete garment.

**6.5** Dimensional changes on exposure to heat shall not exceed the requirements of SANS 6130.

**6.6** The seam breaking strength of stitching of protective clothing shall be in accordance with SANS 5323.

**6.7** The degree of protection provided by the visor against mechanical impact and infrared shall be defined by the relevant standards and carried out in accordance with EN 166.

All seams shall be smooth and all stitching uniform. Seams and stitching shall be free of twists, pleats and puckers and shall be sufficiently extensible to obviate seams cracking and undue shrinkage in use. All ends of sewing that are not secured in

seams or in other sewing shall be adequately backtacked. All ends of sewing shall have been trimmed and loose threads removed. The overall and other garments shall be uniform and of an acceptable make, prescribed colour, finish and matching of the shades of the component parts shall be such as to be acceptable.

### 7.1.1 Instruction for use
