

Environmental Requirements: Supply and delivery of Sodium Chloride Coarse salt.

1. A current Environmental Policy, signed by top management and aligned with the principles of ISO 14001:2015.
2. An aspect and impacts register identifying and assessing the environmental interactions associated with the transportation and delivery of coarse salt to Duvha Power Station.
3. A clear procedure for managing environmental incidents, with specific emphasis on spill prevention, containment, clean-up, and reporting for Sodium Chloride.
4. A plan detailing the practical controls to mitigate environmental risks during delivery (e.g., spill kits, driver training, vehicle checks), developed in line with the principles of the National Environmental Management Act (NEMA).
5. A current, product-specific Safety Data Sheet for the Sodium Chloride to be supplied.
6. Personnel Training Records: Proof that drivers and assistants involved in the delivery are trained in the safe handling and unloading of bulk materials.
