SECTION 2: BACKGROUND, PURPOSE, AND SCOPE OF WORK

2.1 Background and/or Purpose of this Bid

Since inception, Airports Company South Africa Limited (ACSA) has transformed into a focused, profitable and commercial enterprise that is market-driven and customer service oriented. The sustained growth in traffic over the years and increase in aircraft traffic movements has resulting in various pavements at OR Tambo International Airport (ORTIA) requiring rehabilitation to improve the infrastructure reliability. The project aims to appoint a professional service provider to providing engineering design services from ECSA stages 1-6 for the rehabilitation of the pavements and design of new access roads. Once the design is finalised, a contractor will be procured to construct the works.

The pavements to be rehabilitated includes service roads, runways, taxiways and taxi lanes. Selected airside pavements at ORTIA requires rehabilitation due to audit findings from the South African Civil Aviation Authority. The pavements have several surface defects such as longitudinal and transverse cracks, blocking cracking, surface depressions and shear failures. The purpose of the project is to rehabilitate and strengthen selected pavements at ORTIA to prevent pavement failures.

The two thresholds of runway 03L-21R have surface depressions that have resulted in reduced available Take-Off Run Available (TORA) and Take-Off Distance Available (TODA) hence a Notice to Airmen (NOTAM) is in place for this closure. It is suspected that the runway thresholds and other pavements are experiencing a ground water issue. The issue will need to be investigated further and solved.

The electrical engineering component is included to address the existing airfield ground lighting (AGL) that will need to be accommodated in designs and during construction.

In addition, the scope includes the design of two new access roads adjacent to runway 03R – 21L. Currently both the 03R & 21L Instrument Landing System (ILS) service roads are unpaved, and this has a major negative impact on the operations when stakeholders are utilising these roads. Road users are often stuck in the muddy roads reducing their response times thereby affecting operational efficiency. The key stakeholders using these roads are, bird and wildlife for removing birds and wildlife from runway 03R-21L, electrical maintenance for maintaining Automated Weather Observing System (AWOS), approach lights, ATNS for maintenance of ILS, Fire and Rescue for maintenance of emergency gates, response to fire breaks and other emergencies.

2.2 Scope of Work

Pavement Rehabilitation

The scope of work will address the degradation and wear of various airside pavements. The summary of the various pavement requiring rehabilitation is detailed below in table 1 and a graphical representation in figure 1:

Service Roads

The intended solution to address the challenges with the unpaved roads is to design and construct new paved access roads over the existing informal road footprint. The proposed solution will be the design of a four-meter-wide service road to replace the unpaved roads. There are two sections of the road, one at each end of the runway. The first service road is at ILS 03R with a length of approximately 1.4 kilometres. The second service road is at ILS 21L with a length of approximately one Kilometre. The roadway does cross a minor stream. The intended route and approximate location are shown in Figure 2.

Due to the proximity of the service roads to the runway, the entire scope maybe required to be construction during the night when the runway is not active.
