

Intergis System Assessment

The ARC is looking for a system assessment partner to assess its current Integrated Registration and Genetic Information System (INTERGIS). The INTERGIS is a national computer information system for animal recording and registration that the ARC hosts and provides support on behalf of DLLARD.

Detail Specifications:

- Assess and document current system (Technology and Operations)
- Assess current system infrastructure
- Assess the system in line with Acts of government especially those governing animal recording and improvement.
- Engage different stakeholders to gather information with regards to current system
- Record system gaps and improvements required
- Benchmark the system against international best practice in animal recording and improvement
- Recommend short and long term developments to enhance system functionality
- Develop a Roadmap towards the development of the system
- The INTERGIS system include:
 - Operating systems: HP/UX
 - Database: Oracle
 - Iris Application (off the shelf)
 - PHP Web front end
