2. Background

Necsa plans to establish a plasma gasification demonstration facility in a laboratory on-site to volumetrically reduce solid, compressible low-level nuclear waste. An oxygen flame arrester Y1308 is utilized as a safety device in the gas supply system (ENS-NWPVR-PID-24004 [1]) to prevent the propagation of flames that could potentially cause explosions within the facility. The flame arrester is installed on the oxygen gas supply line 25-13-GSVP-012 to the plasma reactor R1403, downstream of the pressure regulator PCV1303B. Its function is to allow flow of oxygen to the plasma reactor under normal operating conditions, but prevent the transmission of flame from a downstream source, in the event of ignition taking place. Details of the oxygen flame arrester are given in the attached Specification Sheet, ENS-NWPVR-SPE-24003 [2].
