$$LC = [1 - x / y] * 100$$

Where

- x is the imported content in Rand
y is the bid price in Rand excluding value added tax (VAT)

The relevant rates of exchange information is accessible on www.resbank.co.za

PART C4: SITE INFORMATION

C4. SITE INFORMATION

Rand Water currently has a total of 240 physical servers that have reached the End of Life (EOL) as they were acquired 8-years ago. The objective of this platform is to host applications such as SAP, Intranet etc. store, retrieve and send computer files and data to other computers on a network.

The impact of using End of Life (EOL) hardware has reduced productivity, increased maintenance costs and limited scalability resulting in the business not being able to meet the everchanging needs.

This server platform operates on a legacy IT design which comprises of separate data storage from the servers. This exercise has proven to be a costly as centralized storage systems and Fibre Channel switches are all purchased, powered, cooled, and managed independently.

These silos created by traditional datacentre infrastructure architecture has presented barriers within the IT infrastructure department to change and progress, adding complexity to every step from ordering to deployment of management resulting in IT failing to meet the growing demands of enterprise applications and fast pace of modern business operations.

Therefore, it is imperative that Rand Water IT infrastructure transforms their existing legacy data centre server infrastructure with a Hyper Converged Infrastructure (HCI) solution that would replace the current legacy infrastructure that has serviced the organization for the past 8 years.

Below is a diagram that depicts this IT legacy design which comprises of a total of 22 rackmount units, total of 240 physical servers, total of 400 virtualized servers and total of 2 virtual software platforms.
