1. PURPOSE

- 1.1 The appointment of a service provider to conduct a comprehensive Strategic Environmental Assessment of Off-Road Vehicle impacts (ORVs) along the South African coastline, including ecological and biological sensitivity assessment, carrying capacity determination, identification of suitable sites for recreational and economic activities, and socio-economic impact analysis. This assessment is focused on activities governed by the ORV Regulations and is not intended to assess or authorise large-scale industrial or development activities (e.g., mining, major infrastructure) which are subject to separate Environmental Impact Assessment (EIA) processes for a period of 36 months.

2. INTRODUCTION AND BACKGROUND

- 2.1 South Africa is amongst the countries with the longest coastline stretching more than 3000 kilometres from the Namibian border on the west to the Mozambique border on the east. South Africa is a biodiversity hotspot, with a diversity of unique biomes and plant and animal life. For many years, people and communities have become heavily reliant on the coast for their livelihoods and socio-economic benefits. About 70%- 80% of the coast is sandy beaches that include coastal dune systems. Consequently, approximately 1 to 2 million tonnes of sediments are transported past the South African coastline at any given time either east or west coast each year due to a south-westerly swell those results in a net-littoral drift along both coasts.
- 2.2 Since the advent of the four-wheel-drive jeep during World War 2, the use of sandy beaches and dunes has become pervasive. The rapid increase of vehicle uses in the coastal areas or beaches for a wide variety of reasons such as vessel launching, access for fishing grounds, recreational activities, construction, tourism, filming and emergency purposes, have had undesired impacts on biodiversity and the coastal environment. A range of studies have demonstrated the need for the control of use of vehicles in the coastal areas by highlighting the impacts associated with uncontrolled use and its impacts on the coastal environment. These studies have underscored the adverse impacts on coastal vegetation where vegetation cover is lost, and sand or soil remains barren making these areas more susceptible to the impacts of coastal erosion and dynamic coastal processes.
- 2.3 Specialist studies have highlighted the physical impact of vehicles on beaches because it relates to compaction and displacement of sand and beach soil, stripping down vegetation, creating access tracks over the dunes, across the foreshore, and creating blow-outs or dune erosion. The rapid rise in sea level and increase in frequency and intensity of sea storms, accompanied by an increase in wave heights, the coastline is expected to experience a greater risk of damage by storm surge; increased exposure to more intense and more frequent extreme events; increased flooding, with greater extent and frequency,

and ultimately more frequent destruction of foredunes, coastal property and infrastructure, signals for the need to ensure that activities like ORV driving is properly regulated and controlled to mitigate the adverse impact on the coastal area.

- 2.4 The Branch: Oceans & Coast (OC) of the Department of Forestry, Fisheries, and the Environment (DFFE), whose administrative centre is situated in Cape Town is tasked with the implementation of Control of Use of Vehicles in the Coastal Area Regulations, 2014 (hereinafter referred to as the Regulations). The Regulations primarily prohibit vehicle use in the coastal area unless such use is permissible under Regulation 3 or permitted under Regulation 4 or exempted under Regulation 16. The Minister has delegated powers and functions to the Deputy-Director General at OC for granting of Exemptions (regulation 16). The powers to issue permits were delegated to Director: Coastal Development and Coordination (regulation 4).
- 2.5 While the regulatory framework exists, there is a critical need to maintain an evidence-based approach to ORV management along the coast that balances environmental protection with socio-economic considerations. This requires comprehensive scientific assessment of coastal sensitivity, determination of sustainable carrying capacities, and identification of areas where controlled ORV access might be accommodated with minimal environmental impact while potentially delivering economic benefits.

3. OBJECTIVES

The objective of this project is to provide a scientifically robust, comprehensive assessment of the environmental impacts of ORVs on South Africa's coastline, establish sustainable use thresholds, and identify potential recreational and economic opportunities that could be developed within an environmentally responsible framework. The appointed service provider will be required to produce the following key deliverables:

- 3.1 Conduct an ecological and biological sensitivity and complexity assessment of the South African coastline in relation to ORV impacts.
- 3.2 Determination of evidence-based thresholds for the maximum number of vehicles that can be accommodated along different segments of the coastline without causing significant ecological damage.
- 3.3 Conduct a socio-economic benefit analysis of opening specific coastal areas for controlled ORV access, with particular emphasis on social, economic, and tourism benefits and trade-offs.
- 3.4 Development of a Strategic Environmental Management Framework (SEMF) to guide DFFE's implementation of the ORV Regulations and guide decision-making related to the implementations of the ORV regulations, permitting, and enforcement.

4. SCOPE AND EXTENT OF WORK

4.1 Strategic Environmental Assessment (SEA) Framework and Process

The overarching methodology for this project shall be a Strategic Environmental Assessment (SEA), conducted in line with the principles of the National Environmental Management Act (NEMA, 1998) and best practice. The SEA will provide a proactive and holistic assessment to inform national policy and the implementation of the *Control of Use of Vehicles in the Coastal Area Regulations, 2014*. For the purposes of tendering, bidders must base their proposals on the full national scope outlined in this ToR, covering the entire South African coastline and all thematic areas. The Scoping Phase (Phase 1) will refine the assessment methodologies and detailed plan of study, not fundamentally alter the geographic or thematic scope.

The SEA process will be structured into the following distinct but integrated phases:

4.1.1 Phase 1: Inception and Scoping

- Conduct an Inception Meeting with DFFE to confirm the project vision, scope, and deliverables.
- Develop a detailed Project Plan and Stakeholder Engagement Plan.
- Conduct a high-level review of all relevant policies, legislation, and existing data to confirm the key issues. This must include, at a minimum, alignment with the Integrated Coastal Management Act (ICMA), Marine Spatial Planning Act (MSPA), National and Provincial Coastal Management Programmes (CMPs), the Climate Change Act (CCA), National, Provincial and district coastal adaptation response plans, as well as relevant Estuarine Management Plans (EMPs).
- Define the precise spatial and temporal boundaries of the assessment.
- Develop a detailed Plan of Study for the full SEA, which will outline the specific methodologies for each specialist component (as detailed in sections 4.2 to 4.6).
- *Key Deliverable: Inception Report and Final Scoping Report for DFFE approval.*

4.1.2 Phase 2: Specialist Assessment and Baseline Definition

- Undertake the detailed specialist assessments as outlined in the Scope of Work, including:
 - Ecological and Biological Sensitivity Assessment (per section 4.2)
 - Carrying Capacity Determination (per section 4.3)
 - Suitable Site Identification Analysis (per section 4.4)
 - Socio-Economic and Tourism Impact Analysis (per section 4.5)
 - Regulatory and Management Framework Review (per section 4.6)
- *Key Deliverable: A suite of Draft Specialist Reports and associated GIS datasets.*

4.1.3 Phase 3: Integrated Assessment and Synthesis

- Synthesise the findings from all specialist assessments to understand the inter-relationships, conflicts, and opportunities.
- Assess the cumulative environmental and socio-economic impacts of various ORV management scenarios (e.g., status quo, limited access in designated zones, expanded access).
- Develop and evaluate a set of strategic alternatives for the long-term management of ORVs on the coast.
- *Key Deliverable: Draft Integrated SEA Report.*

4.1.4 Phase 4: Development of the Strategic Environmental Management Framework (SEMF)

- Based on the integrated assessment, develop a practical SEMF. This is the primary output of the SEA and will serve as a decision-support tool for DFFE. The SEMF must include, at a minimum:
 - A national coastal sensitivity map for ORV use.
 - Clear guidelines and criteria for designating ORV zones (including no-go areas).
 - Protocols for setting and monitoring carrying capacities.

This system should consider key coastal habitats such as coastal dunes, estuarine and river mouth habitats. Any existing classification systems that bear reference as a foundation, will be supplied by the Department, where available.
- 4.2.3 Map and classify the entire South African coastline according to ecological sensitivity using GIS and remote sensing techniques, supplemented by field verification.

- 4.2.4 Use of available information (to be provided by the Department) to assess the physical characteristics of coastal sediments, dune systems, and beach morphology in relation to their vulnerability to ORV impacts, considering climate change projections (e.g., sea-level rise, storm surge).
- 4.2.5 Evaluate the distribution of sensitive or threatened coastal species and habitats that may be affected by ORV use. Any existing evaluations that bear reference as a foundation, will be supplied by the Department, where available.
- 4.2.6 Identify critical breeding, nesting, or feeding areas for coastal fauna (including key terrestrial and avian migration routes), and critical habitats for sensitive coastal flora that require enhanced protection from vehicular disturbance.
- 4.2.7 Assess seasonal variations in ecological sensitivity that may influence appropriate management approaches. Any existing studies that bear reference as a foundation, will be supplied by the Department, where available.

4.3 **Key Input into Integrated Assessment: Carrying Capacity Determination**

- 4.3.1 Develop a scientific methodology for determining the carrying capacity of different coastal segments for ORV use.

- 4.3.3 Conduct site-specific assessments at representative coastal locations (1 site per coastal province) to establish baseline conditions and vehicle impact relationships.
- 4.3.4 Model the cumulative impacts of different vehicle types and densities (viewable as monthly, seasonally and annually) on coastal ecosystems under various management scenarios (available in a format agreed with the Department).
- 4.3.5 A methodology for the determination of recovery rates for impacted coastal environments to inform sustainable use patterns.

- i. The applicable formula to be used is $P_s = 80[1 - (P_t - P_{min}) / P_{min}]$. Provided:

P_s = Points scored for the price of the tender under consideration.

Pt = Price of tender under consideration; and

Pmin = Price of the lowest applicable tender.

ii. A total of 20 points may be awarded to a tenderer as follows:
