SECTION 3: BACKGROUND, OVERVIEW AND SCOPE OF REQUIREMENTS**1 BACKGROUND**

Please refer to **Annexure A- for a detailed scope of work**

➤ SCOPE OF WORK

Transnet intends to conduct a biodiversity interface footprint and impact study, to delineate its biodiversity footprint and quantify the risk and opportunities presented by Transnet operations to the natural environment, and vice versa.

➤ The Objectives

The primary objective of this work is to conduct a biodiversity interface footprint and impact study across Transnet operations then develop a Biodiversity Risk Assessment and Implementation Plan for Transnet. This will be achieved by means of undertaking biodiversity baseline assessment that will serve as a reference point for future comparisons and monitoring efforts, allowing for the evaluation of changes in biodiversity over time. Furthermore, the risk assessment register will assist in identifying and documenting double materiality of the impact of Transnet operations to biodiversity and vice versa.

The Consultant must therefore produce inter-alia:

- Biodiversity Baseline Assessment Report
- Shapefiles of sensitivity maps of Transnet properties at a local or provincial scale
- Biodiversity constraints, dependencies and opportunities register
- Biodiversity Risk Assessment register and Implementation Plan

➤ Detailed Description of Works**➤ Biodiversity Baseline Assessment**

The tasks will include but not limited to the following:

- An initial desktop assessment, using local and provincial spatial biodiversity plans, to provide a detailed understanding of Transnet's landholdings against fine-scale biodiversity plans.
- Identification of biodiversity hotspots, key ecosystem services dependencies and fatal flaws across Transnet's operational footprint.
- Depending on the outcome of the exercise above (biodiversity footprint for hotspots etc); undertake a Multi-Criteria Analysis (MCA) for which the criteria will be based on environmental sensitivity and business priorities/operational requirements. The output of the MCA is to inform the selection of sample sites for ground-truthing.
- Ground truthing of selected sites to include an ecological survey and key ecosystem services provision assessment of the sample sites, taking into account seasonal requirements for flora and fauna under assessment.
- Spatially represent an ecological profile of the sample sites using Geographic Information Systems or

Respondent's Signature

Date & Company Stamp

any compatible mapping software.

- Provide insight into the ecological functions/linkages and importance of the habitats of the sample sites. This should speak to ecological infrastructure and ecological goods and services value.
- Findings of the ground truthing exercise to be compared with initial desktop assessment to inform the method of extrapolation to determine Transnet's biodiversity footprint.
- The baseline biodiversity assessment to identify biodiversity constraints and opportunities across Transnet landholdings.
- Initial and final findings of the biodiversity baseline assessment to be presented to the Transnet Biodiversity Focus Group.

➤ **Deliverables Required from the Service Provider:**

The expected outputs/deliverables for this assignment, includes but not limited to the following:

- Biodiversity Baseline Report - detailing the outcome of initial desktop screening, MCA and ground-truthing of sample sites; this must include a Transnet-wide consolidated report and individual OD Biodiversity Baseline Reports.
- The Report/s must specify the details of the methods applied in collecting and analysing data. All input data must be available in a native format upon request.
- GIS Maps - raw data in the form of ESRI shapefiles, presented in an accurate scale and superimposed on recent aerial photography, where necessary.
- Presentations to the Transnet Biodiversity Focus Group.
- Monthly Progress Report – highlighting progress against the project schedule, risks and issues.

➤ **Biodiversity Risk and Opportunities Assessment**

➤ The tasks will include but not limited to the following:

- Based on the findings of the biodiversity baseline assessment, identify existing or potential threats, constraints, nature-related dependencies and opportunities across Transnet operational footprint.
- Quantify Transnet's nature-related dependencies across Transnet operational footprint.
- Conduct a risk assessment, using an acceptable Biodiversity Risk Assessment Framework (or compatible methodology) and in collaboration with the Transnet Biodiversity Focus Group and key Transnet personnel to quantify Transnet's biodiversity risk profile.
- Make recommendations on ecosystem services and biodiversity mitigation actions (i.e., measures to avoid, minimise, regenerate, restore or transform dependencies and impacts on biodiversity) to be implemented, to manage biodiversity risks and contribute towards the achievement of Transnet's biodiversity goals outlined in the Environmental Sustainability Framework.
- Determine Transnet's material risks to biodiversity that must be disclosed in accordance with the TNFD framework.
- Explore Nature-based solutions (NBS) that can be integrated into the design, rehabilitation and maintenance of Transnet infrastructure assets, in support of biodiversity enhancement, climate resilience and operational performance.
- Identify for each asset type (rail, ports, pipelines and landholdings) the most relevant NBS options,

Respondent's Signature

Date & Company Stamp

their intended functions beyond biodiversity enhancement (climate resilience, erosion control, ecosystem services, etc.), and their applicability to infrastructure rehabilitation and maintenance activities.

- Identification of land within Transnet's landholdings that can be used for biodiversity offset sites, implementation of nature-based solutions, or payment for key ecosystem services maintenance.
- Identification and mapping of key stakeholders and partnership opportunities for Transnet to realise its biodiversity goals.
- Prepare a capacity-building module for Transnet teams on biodiversity and NBS integration into infrastructure asset management. The assessment shall translate biodiversity risks, dependencies and opportunities into operational decision-support tools for investment planning, including prioritisation criteria applicable to infrastructure rehabilitation projects (rail, ports, pipelines).

➤ **Deliverables Required from the Service Provider:**

The expected outputs/deliverables for this assignment, includes but not limited to the following:

- Preparation for the risk workshop material and facilitation of the Risk Workshop with Transnet representatives.

- Biodiversity Impact Report - detailing biodiversity risks, dependencies, mitigation actions and opportunities (Transnet-wide and OD specific report)
- Documented recommendations on nature-based solutions.
- Stakeholder Register and RACI Matrix.
- Capacity building material and awareness material
- Biodiversity assessment tool for project appraisal

➤ **PRESENTATION OF STUDY OUTPUTS**

The outputs comprising of the above-stated deliverables must be presented to Transnet in a virtual meeting to discuss the findings and recommendations. Further to such meeting, each deliverable/report must be revised and finalised in accordance with instructions from Transnet.

The *Consultant* will be expected to highlight assumptions, constraints and limitations of their assessment, validations, advice, necessary information, critical gaps, key success criteria of this study.

➤ **THE REQUIRED RESOURCES**

The *Consultant* must have experience in biodiversity assessment and strategic environmental assessment and this is critical to successful delivery of this assignment. The respective qualification and experience requirements are contained in the panel development and evaluation process. For ground-truthing travel, the consultant must make provision for Transnet representative travel costs.
