APPOINTMENT OF A SATELLITE PLATFORM PREFERRED LIST OF SERVICE PROVIDERS TO DEVELOP, TEST AND/OR IMPLEMENT TOGETHER WITH CGS A SOVEREIGN EARTH OBSERVATION / SATELLITE CAPABILITY PROGRAM FOR A PERIOD OF 5 YEARS.

1. INTRODUCTION

The Council for Geoscience (CGS) is a schedule 3A public entity organisation as defined by the Public Finance Management Act (Act No. 1 of 1999). The CGS derives its mandate from the Geoscience Act No. 100 of 1993. The objectives of the CGS under the Act, is to produce world-class geoscience knowledge products and to render geoscience-related services to the South African public and industry. The strategic position of the CGS is to ensure that its activities contribute to the national imperatives, namely to free the potential of individuals by improving the quality of life of all citizens, assisting in the growth and wealth of the country and eradicating poverty especially in the rural areas of South Africa. It does this through the mandate of the Geoscience Act, which includes the following activities:

- 1.1. To systematically document and compile the geology of the earth's surface and continental crust, including offshore areas within the territorial boundaries of South Africa;
- 1.2. To compile geoscience data, especially geological, geophysical, metallogenic and engineering geological information in the form of maps and accompanying explanations and to make this information available to the public;
- 1.3. To do basic geoscience research into the nature and origin of rocks, ores, minerals and the history and evolution of life and to understand the geological evolution of the earth. These findings are published in peer reviewed geoscience publications nationally and internationally;
- 1.4. To collect and curate all geoscience knowledge for the country into the National Geoscience Repository and to make such information available to the public as far as it is possible;
- 1.5. To render geoscience knowledge services and advice to the State to enable informed and scientifically based decisions on the use of the earth's surface and its resources within the territory of South Africa;
- 1.6. To manage several national geoscience facilities on behalf of the country such as the National Seismograph Network, the National Borehole-Core Repository, the National Geoscience Heritage Collections (Geoscience Museum) and the National Geoscience Library; and
- 1.7. To render commercial geoscience services and products to national and international clients.

APPOINTMENT OF A SATELLITE PLATFORM PREFERRED LIST OF SERVICE PROVIDERS TO DEVELOP, TEST AND/OR IMPLEMENT TOGETHER WITH CGS A SOVEREIGN EARTH OBSERVATION / SATELLITE CAPABILITY PROGRAM FOR A PERIOD OF 5 YEARS.

2. PURPOSE OF THIS APPOINTMENT

The Council for Geoscience is mandated to collect, process and curate geoscientific data for the South African government.

CGS would like to engage with technology pioneering partners to acquire, develop, test and/or implement cutting edge technology.

The benefits of such strategic alliances are speed of technology uptake, keeping in pace with latest developments, exploiting the availability of idle smart technology, improved efficiency through application of multiple sensors.

Engagement with high-tech third parties will support the business case for planned competence creation and development also supporting human resource development and transformation enabling.

3. SCOPE OF WORK

The Council for Geoscience makes extensive use of Synthetic Aperture Radar (SAR) and Hyperspectral satellite imagery for various critical time-sensitive services. Currently, the CGS procure this imagery from international sources at a great expense. The use of satellite imagery in the day-to-day operations of the CGS, as well as multiple other key government agencies, commercial and civilian domains is constantly increasing.

In this light, a strong and defensible case exists to rather own our sovereign earth observation satellites with SAR and Hyperspectral payloads, merged with downstream data dissemination analysis platforms.

Additionally, as a future-focused contributor to economic growth, this program can harvest and benefit from a wealth of local satellite engineering and manufacturing capabilities, and in this manner serve as a catalytic program for this globally growing industry. Crucially, this program will be catalytic, and by correctly planning and executing this satellite development program with maximum focus on local participation and transformation, multiple SMEs, Academic and Research partners active with satellite engineering and imaging processing can be involved and supported via a single optimally focused program.
