BILL NO. 7				
CARPENTRY AND JOINERY				
(CPAP WORK GROUP NO. 126 UNLESS OTHERWISE STATED)				
PREAMBLES				
The descriptions given in the various items below are not necessarily full and complete and reference must be made to the "General Preambles for Trades 2017" as published by the Association of South African Quantity Surveyors", and Supplementary Preambles for further description and amplification of work in this section				
SUPPLEMENTARY PREAMBLES				
Dimensions in descriptions of trusses are nominal and actual measurements are to be obtained from the Architect and/or taken on site before design or fabrication commences				
PRE-TREATMENT OF TIMBER				
This service falls within the areas defined in the National Building Regulations for treatment of timber against insect infestation / insect pest affecting softwood fixed permanently in all buildings.				
The regulations require that the timber be treated in terms of SABS 05 and to comply with SABS 457, 753, 754 or 1288 as relevant. Tenderer's are to make allowance in there rates.

PREFABRICATED ROOF TRUSSES		ľ		
All timber roof trusses including gang nailed trusses and bolted trusses with lapped members must comply with SABS 0243: The Design, manufacture and erection of timber trusses.				
The tenderer is to allow in his rates for an Registered Engineer nominated by the Roof truss supplier to issue the TR1 and TR2 certificate for the design and installation of related works to the Principle Agent.				
Prices for the roof trusses are to include for all temporary bracing and supports and for all necessary top and bottom chord bracing, wind bracing and runners where required all over hanging ends to be wrot faced all round				
PREFABRICATED ROOF TRUSSES, ETC.				
The following is applicable in respect of timber roof trusses: Trusses are to be designed, manufactured and delivered to site. Ceilings are plaster board or fibre cement sheeting on softwood brandering.				
Irregular - shaped hip roof construction to roof size length 55600 x width 14700mm / width 18200mm overall on plan (area on plan 851m2) over Detective Services and Support Services, all to accommodate roof sheets, including 114 x 38mm S.A. pine wall plates, 152 x 38mm S.A. pine trusses at approximately 760mm centres, rafters, timber beams, permanent bracing and 38 x 38mm S.A. pine purlins at approximately 320mm centres for roof covering with all purlins fixed to rafters with approved hurricane clips and trusses fixed to wall plates with approved roof ties with rafter end overhang and all exposed timbers at eaves are to be wrot (measured approximate area on plan). Tenderers are referred to Architects drawing number: UKU - A - 1000, annexed to these bills of quantities.	No	1

BILL NO. 11				
METALWORK				
CPAP WORK GROUP NO. 136 UNLESS OTHERWISE STATED)				
PREAMBLES				
The descriptions given in the various items below are not necessarily full and complete and reference must be made to the "General Preambles for Trades 2017" as published by the Association of South African Quantity Surveyors", and Supplementary Preambles for further description and amplification of work in this section				
SUPPLEMENTARY PREAMBLES				
Descriptions of bolts, anchors, etc.				
Descriptions of bolts shall be deemed to include nuts and washers.				
Descriptions of expansion anchors and bolts and chemical anchors and bolts shall be deemed to include nuts, washers and mortices in brickwork or concrete.				
Items described as "holed for bolt(s)" shall be deemed to exclude the bolts unless otherwise described.				
Items described as "plugged" shall be deemed to include screwing to fibre, plastic or metal plugs at not exceeding 600mm centres.				
Aluminium doors, windows, etc.				
Doors and windows shall comply with AAAMSA design criteria.				
Doors and windows shall be supplied with protective tape and plastic and shall be removed only once surrounding trades have been completed.				
The Contractor is advised that the design, supply and installation of the aluminium windows, doors and shopfronts are to be carried out in strict accordance with the Architect's specification and all aluminium profiles, manufacturing and fixing methods are to comply with

# AAMSA specifications and installation standards. The Contractor to provide shop drawings for approval by the Architect. The Contractor shall submit shop drawings for approval by the Architect within two weeks of appointment. The Contractor shall only proceed with the works after written approval has been given by the Architect. The Contractor is to allow for and calculate tolerances for expansion and contraction of all aluminium profiles. The contractor is to provide a waterproofing guarantee for all shopfront and windows. The Contractor is to confirm all window and shopfront sizes with the Architect. The following certificates shall be provided prior to commencement of work on site: 1. A copy of the relevant AAAMSA performance test certificate from the manufacturer/contractor supplying the architectural aluminium product. 2. A certificate of conformance confirming that anodising or powder coating has been processed in accordance with SANS 999 and SANS 1796 respectively. 3. A powder guarantee of not less than 15 years issued by the powder manufacturer. The specific conditions contained in this guarantee shall form part of the powder coating process. 4. A certificate of conformance confirming that glazing has been installed in accordance with SANS 10137 ensuring that safety glazing materials have been installed in the mandatory areas and that each individual pane of safety glazing materials has been permanently marked. 5. A warranty from the manufacturer of the laminated safety glass and/or hermetically sealed glazing units guaranteeing the products against de-lamination and colour degradation for a period of not less than five years. 1	Brought Forward	1		R	Ĩ
48	Purpose made steel window, overall size 900 x 1000mm high security cell window with two stage barrier installation and 100 x 50 x 2,5mm steel open channel frame with glazing beads, steel mesh with 6.4mm thick laminated glass including a circular cut out. Fitted with 16mm diameter bright mild steel bars at 80mm centres with M8 expansion bolts to fix frame onto wall, including 8mm rivets to secure speech profile at 150mm centres with timber spacers to hold glass in position. Window Type W6. Tenderer's are referred to Architect's drawing No. UKU - A - 1006 - 01, annexed to these bills of quantities.	No	3		
	BULLET PROOF GLASS				
	53mm thick ballistic glass with 75mm diameter communication hole at 1600mm high from floor. Window to be installed on top of countertop. Provide for the window to be tinted to reduce vision from the outside.				
	All to meet AAAMSA certification. Contractor to provide shop drawings for approval and AAAMSA certification. All measurements to be checked on site prior to manufacture.				
49	Bullet proof glass 900 x 2900mm high	No	2		
50	Bullet proof glass 1080 x 2900mm high	No	1		
51	Bullet proof glass 1200 x 2900mm high	No	1		
52	Bullet proof glass 1259 x 2900mm high	No	1		
53	Bullet proof glass 2180 x 2900mm high	No	1		
54	Bullet proof glass 2380 x 2900mm high	No	1		
	GALVANISED STEEL BURGLAR BARS				
55	Galvanised mild steel burglar bars comprises of 12mm vertical round bars welded on 40 x 5mm flat bar frame at 80mm centres. Frames to be bolted to walls with M6 expansion bolts at 500mm centres. All visible bolts must be tack welded.  Burglar bar size 4770 x 3000mm high including opening				
30	for a single steel door, door type D08 (Door elsewhere measured).	No	1

BILL NO. 12				
PLASTERING				
(CPAP WORK GROUP NO. 142 UNLESS OTHERWISE STATED)				
PREAMBLES				
The descriptions given in the various items below are not necessarily full and complete and reference must be made to the "General Preambles for Trades 2017" as published by the Association of South African Quantity Surveyors", and Supplementary Preambles for further description and amplification of work in this section				
SUPPLEMENTARY PREAMBLES				
Method				
The method to be used shall be either the monolithic method or the bonded method				
Laying				
Monolithic granolithic shall be applied to the partially set slab and thoroughly compacted and lightly wood floated to the required levels				
Bonded granolithic shall be applied to the slab after applying a 1:1 sand-and-cement slurry brushed over the surface and allowed to partially set before applying the granolithic. The granolithic shall be thoroughly compacted and lightly wood floated to the required levels				
After wood floating, the monolithic and bonded granolithic shall remain undisturbed until bleeding has ceased and the surface has stiffened. Any remaining bleed water and latence shall then be removed and the surface steel trowelled or power floated
