Background

The South African Local Government Association (SALGA) is committed to enhancing the efficiency and accessibility of services provided to local governments across the country. As part of its digital transformation strategy, SALGA has recognized the need to adopt cloud technologies to streamline operations, improve data accessibility, and foster collaboration among municipalities. Cloud adoption and migration are pivotal for modernizing infrastructure, reducing operational costs, and enabling more flexible, scalable, and secure systems. By moving to the cloud, SALGA aims to empower local governments with the tools to deliver improved services, enhance citizen engagement, and accelerate innovation in line with the growing digital demands.

Problem Statement

As cyber threats continue to evolve and grow more sophisticated, organizations are increasingly at risk of data breaches, financial loss, and reputational damage. Traditional security measures are often insufficient to identify and address potential vulnerabilities before they can be exploited by malicious actors. To mitigate these risks, it is crucial to conduct proactive penetration testing and vulnerability assessments. These practices help identify weaknesses in an organization's systems, networks, and applications, allowing for timely remediation and strengthening of overall security defenses. Penetration testing and vulnerability assessments are vital in staying ahead of emerging threats and ensuring robust protection against cyberattacks.

Scope of Work

The security assessment should identify and evaluate the security vulnerabilities in the client's network infrastructure. This will involve testing the network perimeter, systems, applications, and internal network segments to simulate real-world attacks, determine weaknesses, and provide actionable recommendations for remediation.

Objectives

The primary objectives of the penetration testing and Vulnerability Assessment are to:

- Identify vulnerabilities within the network infrastructure.
- Evaluate the effectiveness of the existing network security controls.
- Test the potential impact of identified vulnerabilities through simulated attacks.
- Provide detailed findings, risk assessments, and remediation recommendations.

The primary components to be assessed should include but not limited to;

INTERNAL

- Wired and Wireless Network
- Firewall
- Active Directory
- Social Engineering (Phishing Campaigns)
- IT Security Policies
- Phishing Campaign

EXTERNAL

- SALGA Web Site
- Azure
- O365 Applications
- Exchange

KEY DELIVERABLES

- **Pre-engagement Summary:** Final scope, timeline, and authorized targets.
- **Penetration Testing Report:** A comprehensive report outlining findings and recommended actions.
- **Remediation Guidance:** A detailed, actionable set of recommendations for addressing discovered vulnerabilities.
