1. PURPOSE

The purpose of this exercise is to appoint a legible service provider for **Servicing, maintenance and replacement of pumps in the Tsitsikamma Section of Garden Route National Park for a period of 3 years.**

2. BACKGROUND

South African National Parks (SANParks) is a public entity functioning under *National Environmental Management: Protected Areas Act 57 of 2003 (Act 57 of 2003)*; with the mandate to conserve; protect; control; and manage national parks and other defined protected areas and their biological diversity (Biodiversity). As a public entity, SANParks is also governed by the *Public Finance Management Act, Act 1 of 1999 (as amended by Act 29 of 1999)*, and it is listed as *Schedule 3 Part A: 25 public entities*. SANParks' operations are totally guided by its vision statement and mission statement. As a public entity, the organisation is committed to act in pursuance of transformation of South Africa's society in support of entrenching South Africa's democracy. In this regard, the organisation has adopted a transformation mission to guide its efforts accordingly.

3. SCOPE OF WORK

To service and maintain Electric submersible (centrifugal) multistage pumps of various sizes, as well as replacement of irreparable pumps, should the need arise. The park had experienced challenges with unscheduled maintenance as it is often the most significant cost of maintenance, and failures of mechanical seals and bearings are among the major causes.

Therefore, pump efficiency is an important aspect of maintenance as its function is to discharge the affluent and as such, pumps should be monitored and regularly tested. For the centrifugal pumps, the efficiency tends to increase with flow rate up to a point midway through the operating range (peak efficiency or Best Efficiency Point (BEP) and then declines as flow rates rise further.

Pump efficiencies tend to decline over time due to wear (e.g. increasing clearances as impellers reduce in size). For centrifugal pumps, an important design issue is matching the head loss-flow characteristic with the pump so that it operates at or close to the point of its maximum efficiency.

The application for the pumps in the park is as follows:

- Commercial use
- Drainage of sewer from the sumps
- Equipped with an impeller
- Submersible up to 5 metres depths
- Liquid temperature up to 40 degrees Celsius
- Passage of suspended solids >43 mm
- Three phase

The contractor must be able provide a service that will include periodic monitoring and testing of pumps systems and take corrective actions to restore pumps to its original condition. Where necessary remove and repair pumps to their workshop where in instances where the pumps cannot be serviced or repaired on site. As such the service contract can be summarized as follows:

a) Yearly Basis Pumps Maintenance Schedule

- Supply and install pumps including the auxiliary devices and electrical cabling
- Test and maintain pumps insulation systems
- Inspect sewage grinder pump motor chamber for oil level and contamination and repair
- Inspect the pump impeller and body for excessive build-up or clogging and repair
- Inspect the pump motor and bearings and replace as required
- Inspect the grinder pump motor seal for wear or leakage and repair as required
- Inspect the sewage grinder pump breather vent
- Repair shaft, Rewinding, Replace seals, Bearing, Mec seal, Oil & grease
- Supply and fit new mechanical seat sets
- Testing and Spraying of a Sub-mersible pump
- Replace irreparable pump with new one
