CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

CUSTOMISATION/ENHANCEMENT, MAINTENANCE AND
SUPPORT SERVICES OF OHSC INFORMATION
SYSTEMS FOR A PERIOD OF THREE YEARS.**

1. OVERVIEW OF OHSC

The Office of Health Standards Compliance (OHSC) is a health sector regulator established in terms of the National Health Act, 2003 (Act No 61 of 2003, as amended). The purpose of the OHSC is "to protect and promote the health and safety of users of health services by:

- a. monitoring and enforcing compliance by health establishments with norms and standards prescribed by the Minister of Health and
- b. ensuring consideration investigation and disposal of complaints relating to non-compliance with prescribed norms and standards in a procedurally fair, economical and expeditious manner

2 SUMMARY OF SCOPE

The purpose of this request is to solicit bids from suitably qualified bidder(s) to submit proposals for the provision of Bespoke Software Development, Customisation/Enhancement, Maintenance and Support Services to OHSC in accordance with the rules set out in this RFP.

3 DURATION OF SCOPE

The successful bidder will be appointed for a period of three (3) years at OHSC's discretion and subject to 'OHSC's terms and conditions.

4 PROJECT BACKGROUND

In line with its mandate, the OHSC collects information from health establishments to monitor compliance with the norms and standards through inspections in accordance with section 79(1)(b) of the Act, collect information relating to prescribed norms and standards in line with section 79(2)(b), monitor indicators of risk through an early warning system as stipulated by section 79(1)(d) and investigate of complaints in relation to the breaches of norms and standards in accordance to section 79(1)(c).

In November 2019, the OHSC appointed a strategic partner to assist in the development and design of bespoke integrated enterprise systems and functionality for the OHSC Information System for enhanced productivity, efficiency and improvement of OHSC service delivery and monitoring. Over the duration of the contract, systems, subsystems, solutions and processes were developed and implemented within OHSC.

The current existing contract will be expiring and its crucial that OHSC have a service provider onboard to sustain operations.

The bidder should demonstrate professional expertise, relevant previous experience and have multiple skills to execute and deliver a project of this scale.

4.1 Overview of Information System Functionality

The following integrated systems and sub-systems/modules were developed and implemented within the OHSC.

- 4.1.1 RBAC - Role-based access control (RBAC): Each user has access to the system application that they need to perform their job. Every user within the system has designed rules which determine their permission depending on the user's rules. The system admin can modify the access and edit the authorization accordingly.
- 4.1.2 The RBAC has two main functions, including Rule Assignment and User Access (Authorization). The RBAC is based on several levels, including OHSC, health establishments, sub-district level, district level, provincial level, and national level. The RBAC sections contain a database for 4416 health establishments such as sector, province, district, sub-district, and ownership, which are controlled and updated regularly.

4.2 Measure master & tool download

4.2.1 Inspection Tools

The OHSC Inspection Tools are developed as cascading questions over six levels of architecture, including domain, sub-domain, standard, criterion, and measure. There are two types of measures: direct questions and checklists. In addition, the questions are then grouped into sub-sections according to the services provided within a health establishment, known as functional areas, as follows clinics, hospitals and Community Health Centre's. (CHC)

The inspection tool therefore accommodates an eight-level hierarchical structure. The levels of the architecture, from one to eight, are named as follows: 1st Functional Area, 2nd Domain, 3rd Sub-Domain, 4th Standard, 5th Criterion, 6th Measure, 7th Checklist, and 8th Explanatory Note.

The system allows adding in between measures, deleting, and automatically numbering from 1 to the end. The system allows customising the selection of functional areas when the inspection is created.

Based on the above, the user can create the respective inspection tool as per regulation and save it at 3 levels.

- Draft tool: to allow for additional revisions before final submission
- Pilot tool: to allow for the completion of tool testing
- Final tool: this is an approved and finalized tool which will be automatically uploaded to the inspectorate section.

In addition, the tools can be saved in printable format. Other features in this section includes:

- a) an audit trail is to monitor and trace within the inspection tool section and
- b) version control to prevent duplications and enable comparison between different inspection tools.

4.2.2 Offline inspection:

This system allows users to download scheduled inspection tools along with all pertinent information such as the name of the health facility, the name of the inspection tool, the norms and standard regulations, image uploading, photo capture, e-signature, syncing, and backup are among the other capabilities.

Offline Tablet – inspectors use the offline tool to conduct inspections.

- Download the assigned inspections
- Offline answers
- Syncing of data

4.2.3 Inspectorate; This section consists of three levels, namely: schedulers, team leaders, and inspectors.

4.2.3.1 Schedulers; this section allows the user to view the developed inspection tool that is required to be used in the up-and-coming inspection. Upon confirmation, the user can schedule an inspection visit and select the respective health establishments due for inspection within a specific date range. Furthermore, the user can allocate the inspection to the respective team leaders. Once the selection and allocation are confirmed, the

system will upload the schedule automatically to the inspectorate for the team leader to action.

4.2.3.2 Team leaders: This section consists of the following sub sections:

a) assigning inspectors;

Assigning inspectors; this section allows the user (Team Leader) to view the assigned inspection details and start preparing for the inspection, such as selecting team members or borrowing other inspectors from other team leaders.

b) reviewing the inspection data;

This function enables the user to evaluate the synced inspection from the offline system in order to validate and clean data before it is finalised.

c) assigning a co-team leader;

This function allows the user to designate a co-team leader and grant them access to the inspection in order to assist the team leader with tasks such as validating and data cleaning.

d) completing the inspections (finalization);

This function allows the user to approve the completed inspection after validation and have it ready for reporting purposes

e) Chat room;

This is a communication tool that allows all team leaders and inspectors to exchange inspection data information and feedback.

f) Uploading reports;

Users can upload inspection data to the reporting platform using this feature. As a result, the data will be fed into a calculation formula and a compliance status framework, which will score the results and generate a final grading and compliance decision for each health facility.

4.2.3.3 Inspectors: This section provides users with information about upcoming inspections as well as a date range. As a result, the user will download the inspection tool to an offline system so that it can be used in the field. Other features include data revision, which allows users to participate in data cleaning and validation.

4.2.4 Reporting system; consist of three sections: a) reporting platform b) Release reports c) Query tool.

- a) Reporting platform: This part shows the inspection results for each health establishment, which may be seen at several levels and allows the user to drill down to the most basic information. It also shows grading at the functional area, domains, subdomains, standard, criteria, and health establishment levels, as well as compliance decisions at the measure and health establishment levels.
- b) Release reports: The primary purpose of this section is to enable the OHSC to provide reports to all inspected health establishments and external panel members so that everyone can evaluate the results and provide input and comments to the OHSC (as per 20, 20, 20 rules). The type of reports are preliminary report, external panel members, final report, and re-inspection report.
- c) Query tool; This validation tool allows users to download data from the system for quality assurance and verification. The download can be done at the provincial, at Health Establishment, Inspection, and at Team Leader level.

4.2.5 Certifications - functions and External Panel Members (EPM) etc.

- Assigning EPM; the user will be able to select EPM members to comment
- EPM review duration; the user will be able to allocate the number of days that are needed to complete the EPM review.
- Compliance certification; user will be able to attach a compliance certificate per health establishment. (HE).
- Non-compliance notice; the user will be able to attach the notice by HE.

4.2.6 Annual Returns

This system allows for the creation and customization of questionnaires to collect information in relation to health 'establishments' profile. The health establishments users will be able to complete and submit the questionnaires within a specific time frame once it has been developed. In addition, this section has a validation tool that allows users to download data from the system for quality assurance and verification.

4.2.7 Early warning system (EWS)

The EWS is a surveillance system that collects data on certain events on a regular basis for the OHSC to intervene promptly. This feature allows the user to create and customize a reporting form . A dashboard is available in this part, which allows users to access data from the system for quality assurance and verification.

4.2.8 Re-inspections

The re-inspection was developed to conduct an additional inspection per health establishment that would have been found non-compliant following a routine inspection as guided by the compliance status framework. Re-inspections are prioritised according to the nature and the extent of non-compliance.
