A maximum of 80 points are allocated for price on the following basis:

$$P_s = 80 \left(1 - \frac{P_t - P_{\min}}{P_{\min}} \right)$$

Where:

P_s = Points scored for comparative price of bid under consideration

The definition and measurement of the goals above is as follows:

Women, disability, and youth:

This will be measured by calculating the pro-rata percentage of ownership of the bidding company which meets this criterion. E.g., Company A has five shareholders each of whom own 20% of the company. Three of the five shareholders meet the criterion, i.e. they are women/disability/youth. Therefore, this bidder will obtain 60% of the points allowable for this goal.

Location of enterprise

Local equals province. Where a project cuts across more than one province, the bidder may be located in any of the relevant provinces to obtain the points.

B-BBEE status level contributors from level 1 to 2 which are QSE or EME

Measured in terms of normal BBEE requirements.

Note: Formula for calculating points for specific goals

Preference points for entities are calculated on their percentage shareholding in a business, provided that they are actively involved in and exercise control over the enterprise. The following formula is prescribed:

$$PC = Mpa \times \frac{P\text{-own}}{100}$$

Where

PC= Points awarded for specific goal

Mpa= The maximum number of points awarded for ownership in that specific category

P-own = The percentage of equity ownership by the enterprise or business

1. INTRODUCTION

The quality of South Africa's freshwater resources is increasingly pressured by rising pollution and wastewater management challenges. To mitigate the impact on the national economy, environment, public health and community well-being, the Department of Water and Sanitation (DWS) implements various national strategies, including integrated water quality management at both national and regional levels. A critical element of this approach is the ability to reliably monitor chemical and biological contamination trends through systematic sampling and analysis.

Effective monitoring depends entirely on the rapid, dependable, and accredited analysis of water samples collected from designated sites across the country. The DWS has the constitutional mandate to protect water resources and ensure that they remain fit for use (e.g., irrigated agriculture, recreation, domestic supply, etc.). This mandate is executed through various National Water Quality Monitoring Programmes that sample at predetermined frequencies, implemented and coordinated by the DWS Directorate of the Resource Quality Information Services (RQIS).

At present, the majority of samples are analysed at the DWS Resource Quality Information Services (RQIS) analytical laboratories. However, these laboratories occasionally experience operational challenges that lead to backlogs and delays in data delivery. Furthermore, specialised analyses such as methods for detecting priority organic pollutants remain under development and validation. Microbiological and toxicity testing samples must be analysed within 24 hours of collection, which limits the DWS RQIS laboratories in practice. The DWS RQIS laboratory is also building capacity for diatom identification and enumeration, but this is not yet fully operational.

Under this contract, an accredited external laboratory service provider will:

- Provide **primary analytical services** for specialised matrices (organics in water/soil/sediment, estuarine water, and ad-hoc samples such as diatoms and fish tissue during fish kill incidents).
- Act as a **back-up analytical service** for routine parameters when RQIS analytical services are affected by instrument breakdowns, backlogs, or other disruptions.
- Provide analytical support for **estuarine samples** (which have high salt content) and **ad-hoc samples** collected during fish kill or ecological emergency investigations.

The WRC Project "A Manual for Fish Kill Investigations in South Africa" (Report No. TT 589/14) provides detailed guidance on the physical and chemical water quality parameters that must be measured to understand the cause(s) of a fish kill. The manual also identifies a list of sub-contract laboratories that are specifically recommended for fish tissue analyses. The service provider may, with prior authorisation from the Department, engage such specialist subcontractors on a case-by-case basis for fish-tissue analyses.

The laboratory must be accredited in accordance with SANS 17025:2018 for the relevant analytical fields. If certain analyses are not performed in-house, the service provider may engage accredited specialist subcontractors, subject to written authorisation from the Department for each specific case.

2. GENERAL DETAILS OF BID

2.1 To be awarded the contract, the Analytical Service Provider must:

- have a SANS-17025:2018 accredited laboratory, and this must include laboratory facilities to do basic, specialized and complex water, wastewater quality analysis and other environmental samples, such as soil analyses and participate in a recognised Proficiency Testing Scheme (PTS).
- will not be allowed to change the method of analysis during the contracted period unless it is scientifically necessary to do so and with DWS approval.
- must comply with the general requirements and report format specifications as specified in **Section 4**;
- It is a requirement that the laboratory must supply an analytical service for the complete set of constituents as per the listed items; if there are constituents that are not analyzed in the laboratory, it can be sub-contracted to another SANS 17025:2018 accredited facility.

2.2 Although the constituents required are divided into groups, the Analytical Service Provider must quote for the individual determinants and provide a price per Item. The analysis required for any one sample may or may not be for all the constituents in a group; the analysis could be for a single parameter or for all the parameters in a group or Item. (See Annexure A)

2.3 The Analytical Service Provider must complete **Section 4** and **Annexures A to D**.

CONDITIONS

The conditions governing this tender are as set out in the document entitled "Departmental General Conditions of Tender".

SPECIAL CONDITIONS

The Department reserve the right to inspect the facilities of the service provider during the contract period when and if required, to evaluate the service facilities and spare parts holding.

SERVICE

The service to be rendered under this tender quote is the provision of laboratory services to conduct water quality Analysis for routine surface, ground, estuarine and ad hoc related samples for national water quality monitoring programmes as managed by the Directorate of Resource Quality Information Services (RQIS) for a period of 36 months.

QUANTITIES

The state reserves the right to submit the number of samples that are required or to limit the samples to the need or limit the sample request to the available budget.

3. QUALITY REQUIREMENTS AND QUALITY CONTROL

- 3.1 It is essential that the laboratory is SANS 17025:2018 accredited by a recognised authority for all the constituents.
- 3.2 If the laboratory is not accredited, the laboratory needs to provide evidence of successful Proficiency Testing Scheme (PTS) participation. These laboratories will be considered where locality and sample viability cannot be satisfied by an accredited laboratory.

Phase 3 – Price and Specific Goals:

Table 2: The 80/20 Preferential Procurement System will be used in evaluating these bids

	POINTS
PRICE	80
Specific goals	20
Total points for Price and Specific goals must not exceed	100

Price

A maximum of 80 points is allocated for price on the following basis:

$$P_s = 80 \left(1 - \frac{P_t - P_{\min}}{P_{\min}} \right)$$

Where:

P_s = Points scored for the comparative price of the bid under consideration.

P_t = Comparative price of bid under consideration

P_{min} = Comparative price of the lowest acceptable bid

Preference point system

SPECIFIC GOALS	NUMBER OF POINTS TO BE ALLOCATED
Women	5
People with disability	5
Youth (35 and below)	5
Location of enterprise (Province)	2

The definition and measurement of the goals above are as follows:

Women, disability, and youth:

This will be measured by calculating the pro-rata percentage of ownership of the bidding company which meets this criterion. E.g., Company A has five shareholders, each of whom own 20% of the company. Three of the five shareholders meet the criterion, i.e. they are women/disability/youth. Therefore, this bidder will obtain 60% of the points allowable for this goal.

Location of enterprise

Local equals province: Where a project cuts across more than one province, the bidder may be located in any of the relevant provinces to obtain the points.

B-BBEE status level contributors from levels 1 to 2, which are QSE or EME

Measured in terms of normal BBBEE requirements.

Note: Formula for calculating points for specific goals

Preference points for entities are calculated on their percentage shareholding in a business, provided that they are actively involved in and exercise control over the enterprise. The following formula is prescribed:

$$PC = Mpa \times \frac{P\text{-own}}{100}$$

Where

PC = Points awarded for a specific goal

Mpa = The maximum number of points awarded for ownership in that specific category

P-own = The percentage of equity ownership by the enterprise or business

5. QUANTITY OF SAMPLES TO BE ANALYSED DURING CONTRACT PERIOD

- Routine samples will be submitted monthly, and emergency samples will be submitted when required. The Analytical Service Provider must indicate the competency to conduct analysis as per Annexure A and provide a quotation for all the variables as per Annexure A

NB: The quantity of samples to be analysed per month is subject to change due to various circumstances.

6. CONTRACT AND INVOICES

- The project timeframe is thirty-six (36) months from the date of signing of the contract. The Analytical Service Provider will be required to submit invoices monthly, and all payments will be made upon signed deliverables being completed.
- Quarterly Project Management meetings to be conducted to manage the project expenditure and to ensure that the contract period and the contract amount are not exceeded, or when required.

- For all samples submitted for organic constituent analysis under **Item 3.1a (Water Samples)** and **Item 3.1b (Soil/Sediment Samples)**, the service provider shall first perform a **pre-screening** for the presence of target organic compounds (or groups of compounds) using a rapid, cost-effective method (e.g., gas chromatography-mass spectrometry semi-quantitative scan, or an equivalent validated screening technique).
- The **cost of the pre-screening** shall be quoted separately in Annexure A and shall be the only charge incurred if the pre-screening indicates that **no target compounds are present above the laboratory's method detection limit**.
