TENDER SPECIFICATIONS

1. GENERAL DESCRIPTION

The Municipality is looking to procure a sweeper which will be ideal for cleaning roads, parking, and large public and industrial areas. The dirt container capacity should be 6 cubic meters and a water reservoir of 2100 Liters allowing a fair compromise between a high of sweeping autonomy and content footprint, guarantee of compactness versatility and manoeuvrability.

The gathering must take place with the suction nozzle, a cup rotating brush, and a central cylindrical roller brush. In the base version the width of the sweeping band should be able to reach 2200 mm (3200 mm ideally with optional devices that allow to sweep simultaneously on both sides of the machine). The high suction capacity must be guaranteed by independent auxiliary engine and mechanical transmission of power to the fan. A system that gives consistent performance even under heavy duty and at the same time provides a guarantee of extreme simplicity of use and maintenance.

The road sweeper must be characterized by a robust structure obtained by adopting high quality materials and components. All this to achieve a long durability and the best features for reliability and cost. The equipment must be able to be applied on the chassis of trucks of various brands including Man, Mecro, Mercedes, Renault, Volvo, BMC or equivalent approved. The wide range of non-compulsory accessories should allow customization tailored to specific needs.

DIRT CONTAINER

- The volume of waste container is 6 cubic meters (5.5 cubic meters is the waste load capacity).
- Construction of the container with Fe360 steel and stainless steel with plates calendared, thickness 3 mm. The barrel shape is designed to resist the depression inside the compartment collection without the need for additional stiffeners.

The water tank and the inner of compartment collection are made entirely in stainless steel."

- The container tilting is done by a hydraulic cylinder two-stage. First stage with double effect and second stage with simple effect. Tipping angle of container 55°, **with a mechanical security anti falling when the container is raised, and a pneumatic command for the release.**
- **Rear hatch made from stainless steel**, with hydraulic opening through command on the control panel in cabin. Sealing and locking system at three points, operated by hydraulic cylinder and command on the external side of the dirt container.
- Manual pump for the emergency lifting of container.
- Two inspection door. A door on the right side of large dimensions to verify the status of loading, it also permits, if necessary, the emptying of the contents of small waste baskets inside the container. A rear door of inspection with direct access to the area above the filter grid allows to check for any obstructions in the suction pipe.

The grid filtering that sucked air can be opened from outside by a pneumatic command.

WATER TANK AND WATER PLANT

- **Water tank with a capacity of 2100 Liters, totally made with stainless steel AISI 304.**
- Centrifugal pump for gray waters, maximum flow rate 25 Liters per minute, pressure 6 bar.
- Cartridge filter to intercept any impurities that might block the nozzles.
- Device to wash roads and to reduce dust consisting of:

front bar with 4 or 6 nozzles, bar on the central roller with 4 nozzles, 2 nozzles for each side brush, 5 nozzles for dust abatement on each suction nozzle.

The flow rate of each group of nozzles can be adjusted separately through dedicated taps seats on dashboard in the cab. When reverse gear is selected, the supply of water is automatically stopped.

- A faucet with quick-release allows you to connect a water pipe to the circuit to do the cleaning of the waste compartment and washing the vehicle.
- Possibility of filling the tank through a hose with a normal water pipe. Water level indicator by means of external column display.

SUCTION FAN AND DRIVING UNIT

- The depression in the waste compartment is created through centrifugal fan.

The rotor (**blade thickness of 5 mm**) has a diameter of 700 mm and is made of steel Fe 510 or equivalent. The housing of fan is made with sheet metal welded Fe 360 or equivalent, thickness 3 mm, **and the turn is made of an all-around steel that resists wear and abrasion with a nominal hardness of 400 HBW (e.g. Hardox 400), thickness 4 mm.** There are two doors for the inspection of the internal fan.

The fan is activated by an independent auxiliary engine through transmission belts (pulleys with gorges for XPA type belts). The engagement, commanded by clutch, takes place gradually, eliminate vibration during the starting and acceleration of the fan, in a way the duration of the belt increase significantly. Finally, the tightening pulley with springs adjustment allows to recover the natural extension of the belt after the few hours of work. This system of transmission is a guarantee of consistent performance over time even under conditions of continued and burdensome employment. **Compared to hydraulic drive there are no problems related to overheating and / or leakage of oil, maintenance operations are kept to a minimum, cheaper and easier to perform.**

- Motor drive type-approval STAGE III A (or similar approved) 74 kW technical specifications:

Thermodynamic cycle:	Diesel 4 stroke
Power supply air:	Turbo compressor
Arrangement:	4-cylinder in-line
Total displacement (cm3):	4500
No. valves per cylinder:	2
Cooling.	liquid
Injection system:	mechanical
Maximum rating (kW (Hp). -	74 (100)
Running of maximum rating (rpm).	2200
Maximum torque (Nm (kgm)):	412 (42)
Running of maximum torque (rpm):	1250 / 1400
Minimum idling speed (rpm):	800
Minimum starting temperature [°C]:	-15
Oil and filter interval for replacement **[hours]:	600
Dry weight (standard configuration) [kg].	390

**Oil type: ACEA E3 – E5.

For an optimal and continued operation even during warm seasons, all versions adopt a radiator and a muffler bigger than normal, usually used in cooling systems and exhaust of engine with 6-cylinder.

SWEEPING AND SUCTION DEVICES

The sweeping and waste collection is done through a system consisting of:

- Central cylindrical roller brush, diameter 400 mm, made of steel mixed polypropylene (as option it's possible to request the nylon version). The brush is rotated directly by an orbital hydraulic motor of 160 cm³ with maximum speed of 150 rpm variable with the operation of the fan (further second speed of rotation, with dashboard control, optional on request).

- Side cup brush made of strips of steel; 700 mm diameter activated by hydraulic orbital motor of 200 cm³. The motor is equipped with a casing to protect the shaft from any fiber and twine that could wind round during work.

Complete manual adjustment of all tilt angles of brush, both the front angle and the side angle.

The rotation speed of the brush is 120 rpm variable with the operation of the fan (further second speed of rotation with dashboard control).

The pressure of brush on the ground is continuously adjustable with pressure reducer placed in the cabin.

The work area is lit by a beacon operated by dashboard.

-The suction nozzle is made of an all-around steel that resists wear and abrasion with a nominal hardness of 400 HBW (e.g Hardox 400) thickness 4mm, for greater durability and reduce noise due to object sucked. The pneumatic devices for tilting of the mouth, allows you to aspirate, when necessary, objects like cans, bottles, small boxes, and anything else you can find on the street.

- The suction tube that connects the suction nozzle to the waste container is made of rubber, with anti-wear inside coating, and has a diameter of 250 mm.

These devices call operate independently and are easily controlled from the workplace.

The brushes and the cart with suction nozzle are pneumatically driven, **each is equipped with safety hook and with pneumatic cylinder. When the reverse gear is selected, all groups automatically return in a position of “transfer”.**

CART

The suction unit is fixed on a pulled cart. A ball joint allows the truck to adapt to various road conditions.

The wheels of the cart of 250 mm diameter are made in super-elastic rubber.

For this cart the side brush is only available in the pulled version. It's not possible to adjust the extremal excursion of lfie cart.

HYDRAULIC AND PNEUMATIC EQUIPMENT

- The group of hydraulic electric valves is placed in the area that is better protected from dust, and at the same time is easily accessible for maintenance. The oil tank has a capacity of 50 to 70 litres and is equipped with a cartridge filter inserted in the return line.

- The pneumatic installation is connected to the compressor of the truck and has a dedicated air tank. The group of pneumatic electric valves is placed inside a box equipped with a closing door: an effective protection against dust and mater. All

valves are easily accessible and equipped with manual drive system in case of power disruptions."

CONTROL PANEL

- The command panel is placed besides the driving seat in comfortable position and easily reachable by the operator. Of robust construction (made entirely of sheet metal) and with large dimensions, allows the operator, with a single glance, to constantly have the control of each device of the sweeper without having to resort to any menu on display (rotation speed of the auxiliary engine, coolant temperature of the auxiliary engine, pressure of the pneumatic installation of the equipment, hours of work, water distribution on different nozzles to reduce the dust, brushes and suction nozzle in operation, pressure of brushes on the ground, lights lighting area of work and rotating beacons, commands lifting and closing the dirt container, overload indicator, water level indicator).

The absence of electronic circuit boards allows easy and quick identification of possible malfunctions and repair a lot faster and economical in case of failure without the need for specialized technicians.

MAIN OPTION EQUIPMENT

- Toolbox
- High pressure water pump 30 l/min at 150 bar.
- System for washing fan with standard pump or high-pressure pump.
- Device for cleaning streets with front bar fixed or adjustable manually
- Second speed for brushes with command for adjustments in the panel control in cabin.

Only illustrative picture, no front brushes needed

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
 - 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
 - 3 Municipal Supply Regulation 38(1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
 - 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
 - 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:
- ¹ Includes price quotations, advertised competitive bids, limited bids and proposals.
- ² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
