**SPECIFICATIONS/ DESCRIPTION:** Data Analytics Course

Data analytics courses in South Africa cover a range of topics, from introductory concepts to advanced techniques, and are offered by various institutions. Common modules include data analysis techniques, programming languages like Python and R, database management with SQL, and data visualization tools like Tableau and Power BI. Some courses also incorporate machine learning and statistical analysis.

The course covers various data analysis techniques, including descriptive, inferential, predictive, prescriptive, and exploratory analytics. Emphasising practical aspects of data manipulation, interpretation, and presentation using tools like Microsoft Excel, students also gain exposure to relational databases and Structured Query Language (SQL).
