1. PROJECT PURPOSE

The Perishable Products Export Control Board (PPECB) requires the services of a service provider for the provision of sanitation, transportation, and disposal of electronic waste and Information and Communications Technology (ICT) equipment. The appointed service provider will enter into a written contract with PPECB for a period of thirty-six (36) months with the option to renew for a further twelve (12) months.

2. BACKGROUND

The PPECB is a Schedule 3A entity in terms of the Public Finance Management Act 1 of 1999. The PPECB is established in terms of Section 2 of the Perishable Products Export Control Act 9 of 1983. The main purpose of the PPECB is to promote the orderly, efficient, and sustainable export of perishable products from South Africa. The PPECB manages and monitors the cold chain for the export of perishable products from South Africa. The PPECB operates under two mandates, namely the Agricultural Products Standards Act and the Perishable Products Standards Act 9 of 1983.

3. SCOPE

Electrical and electronic waste (e-waste) is classified as hazardous waste, which includes small/large household appliances; office, information and communication equipment, mobile phones, batteries, electric and electronic tools; and security, health care, and ICT equipment. Used electronics which are destined for refurbishment, reuse, resale, salvage recycling through material recovery, or disposal are also considered e-waste.

E-Waste has been declared a priority waste. It contains materials that are considered toxic, such as lead, mercury, and cadmium, which have led to increased environmental concern about improper disposal of these products.

3.1 SPECIFICATIONS

PPECB requires the services of a e-waste recycling and disposal service provider, that has the necessary certifications, licences, and permits, as well as adequate premises to collect, sanitise, transport, and dispose of PPECB's e-waste.

- Sanitisation, storage, transportation, and disposal of devices must be conducted in line with the relevant legislation, including the National Environmental Management Waste Act, Act 59 of 2008 (NEMWA), and the Protection of Personal Information Act (POPIA).NEMWA highlights the significance of information security compliance, as detailed in the Minimum Information Security Standards(MISS), effectively addressing both environmental responsibility and data security.

- After collection, the service provider must issue official chain of custody documentation to prove that devices have been safely and securely collected for sanitisation and disposal, to be used as proof in audits.
- The Service Provider must ensure that;-
 - a. Equipment and hazardous contaminants must be handled and disposed of in an environmentally responsible manner and in compliance with relevant legislation;
 - b. Appropriate and complete clearing of any hard drives to guarantee information security;
 - c. Data sanitization services involve the service provider securely removing (permanently deleting) confidential information, intellectual property, and software;
- The Service Provider must provide monthly and ad hoc reports with accurate and up to date records of all activities of the past month and sufficient information to enable the PPECB to manage and monitor the service.;
- The Service Provider must provide the PPECB with a signed disposal certificate, within three to four weeks from date of handover of equipment, which confirms that the equipment has been sanitised, all data has been erased, and which sets forth the equipment serial number and how the equipment will be disposed of; and
- The service provider must be situated and operate from a safe and secure premises located in the Western Cape; a site visit will be conducted to ensure that appropriate safety and security measures are implemented and that the premises meet the requirements as stipulated in NEMWA and OHSA.

3.2 E-WASTE

The Department of Forestry Fisheries and Environment (DFFE) introduced Extended Producer Responsibility (EPR) Regulations and the WEEE Notice, emphasising the need for structured waste management practices. These regulations, grounded in the NEMWA, marked a crucial shift toward sustainable electronic waste handling, where stakeholders share accountability. Crucially, EPR Schemes require DFFE registration, and compliance with set targets must be reported. Non-compliance carries penalties, underscoring the seriousness of responsible waste handling.

3.3 TERMS AND DEFINITIONS

Term	Description
Collection	Collection involves gathering waste, including preliminary sorting and initial storage, for the purpose of transporting it to storage, manual or mechanical processing, and metallurgical processing facilities.
E-waste Processors	E-waste processors are service providers who use mechanical, chemical, biological, or thermal processes to treat E-waste fractions received from recyclers and recover secondary resource materials.
E-waste Recycling	E-waste recycling encompasses various pre-processing and end-processing steps in a simplified value chain, including manual dismantling, mechanical size reduction, physical/mechanical separation, hydrometallurgy, pyrometallurgy, electrometallurgy, and refurbishment.
Electronic and Electrical Equipment "EEE"	<p>Global Definition: "EEE" refers to electrical and electronic equipment that relies on electric currents or electromagnetic fields to function properly and is designed for use with a voltage rating not exceeding 1000 volts for alternating current and 1500 volts for direct current. In this context, "dependent" means requiring electric currents or electromagnetic fields to fulfil at least one intended function.</p> <p>DEA Definition (as per Section 28(1) Notice): "Electrical and electronic equipment" refers to equipment that relies on electric currents or electromagnetic fields to function properly, including equipment used for generating, transferring, and measuring such currents and fields.</p>
Informal E-waste Processing	Informal E-waste processing involves attempts to maximise sales profits by extracting valuable fractions from E-waste without proper treatment incentives. This approach typically employs inappropriate and unsafe methods, including

Recycling	Recycling refers to any recovery operation involving the reprocessing of waste materials into products, materials, or substances. However, this excludes energy recovery and the reprocessing of materials into fuels or for backfilling operations.
Value Chain	The E-waste value chain comprises four stages: collection, dismantling, pre-processing, and processing.
Valuable Fractions	Valuable fractions of E-waste refer to fractions with market demand, for which the market is willing to pay.
WEEE (Waste Electrical and Electronic Equipment)	WEEE, or electronic waste, refers to all electrical and electronic equipment (EEE) items and their parts that have been discarded as waste by their owners without the intention of re-use.
