Agriculture, Land Reform and Rural Development
REPUBLIC OF SOUTH AFRICA

TERMS OF REFERENCE FOR PROCURING SERVICE PROVIDERS FOR ICASA APPROVED AIR BAND RADIO SETS FOR THE DEPARTMENT OF AGRICULTURE LAND REFORM AND RURAL DEVELOPMENT, SPATIAL PLANNING AND LAND USE MANAGEMENT BRANCH

1. INTRODUCTION

- 1.1. The Department of Agriculture, Land Reform and Rural Development (DALRRD) requires the services of a firm or a consortium of suitably qualified firms for the supply of 20 Transceiver Air Band Radios as indicated in bullet 4.1.2 and bullet 4.2.
- 1.2. The acquisition is to assist the Department in obtaining transceiver air band radios to communicate with other UAS operators (RPL/RPCs) and to manned aircraft and ground Air Traffic Control (ATC).
- 1.3. The project requires a Service Provider with knowledge in communication and specifically Air Band communication.

2. PROBLEM STATEMENT

- 2.1. This Terms of Reference must be read in conjunction with two other Terms of References, namely: "Procure services to assist the Department to train officials to obtain their RPL/RPC for fixed-wing and multirotor drones" and "Procure services to assist the Department in successfully applying for a Remotely Piloted Aircraft Systems Operators Certificate and operational support while ROC is pending".
- 2.2. The Department would see the best investment return on this technology by means of detailed location information or specialised multispectral geo-rectified imagery. These are currently not available to be acquired off the shelf, especially the more specialised multispectral, thermal or lidar imagery. The Department has GISc staff in all SPLUM provincial offices who are taught to use geo-rectified imagery as part of their training. It should be noted that some upskilling of these staff will be required for activities such as precision agriculture, but these are minor courses that can be completed in a matter of a week or two.
- 2.3. The Department needs to note that the regulatory environment pertaining to the utilisation of Drones is rigorous, and it will have to comply with all requirements.

- 2.4. The Department has a vast number of land parcels in its portfolio of either urban or farmland. Adding to this portfolio is the continued acquisition of new farmland and the numerous portions of land affected by land claims, resulting in a real challenge to monitor and support all these land parcels. In reality, this is a practical challenge as access, and even with access, unpassable terrain prohibiting access to the entire land parcels poses a real challenge for the officials responsible for the various activities. The settlement land use surveying and planning, on the other hand, is equally challenging and results in many inadequacies when supporting, especially our rural and traditional communities. This proposal seeks to employ drone technology to assist with these functions.
- 2.5. While drone technology will provide numerous additional benefits, it will also greatly assist with the current challenges. These challenges, amongst others, are 1) getting a comprehensive overview of the properties we acquire in a format that can withstand legal scrutiny if later challenged in court; 2) the ability to support farmers with precision agriculture; 3) assisting with risk management related to alien invasive species, contour ploughing, firebreaks, CARA regulations – Referring to Natural Resources which include vegetation and soil – invaders / aliens / bush incroachment but also soil – over grazing / erosion, dongas and 4) support spatial planning related to our SPLUMA section 9 responsibilities and spatial planning support in traditional areas with updated settlement/site analysis and layout information.
- 2.6. With a projected land acquisition expenditure in excess of a R 200 million, it is clear that technology which can assist with determining all assets, crop health and areas of concern can result in valuable savings. The proposed drone technology has the capability to survey up to 700 ha of land in 90 minutes. Depending on the requirements, this can be an aerial image with a 1,2cm resolution, which is currently unavailable to us at any of the existing sources. Alternatively, a plant vegetation health survey to indicate if the current crops are healthy can be acquired, which is impossible to discern with the naked eye.
- 2.7. The fire threat is genuine and results in court cases that quickly run into millions of Rands. The Department as a landowner, cannot disown the responsibility of firebreaks on any of its properties. This technology will not only assist in monitoring if the legislated requirements are adhered to by our tenants but can also assist with the planning of fire breaks. Detail mapping of the farm terrain will allow farmers and the Department to plan, construct, and maintain effective firebreaks to prevent fires from spreading if it starts on our farms and prevent them from spreading to our farms if they start elsewhere.
- 2.8. Support for rural and traditional settlements is time-consuming, with more specialised activities like risk assessments near to impossible. The recent KZN flooding again just highlighted that even formal development could be severely affected. The grave reality is that risk assessments are not addressed in most rural areas, and subsequently, there is no risk mitigation. Land Use audits are very time consuming, and the deployment of drone technology will allow for a detailed survey of most towns in under a day. This will provide the Department with detailed layout

maps, even a 3D rendering of the town if terrain poses challenges allowing for proper planning and settlement support.

- 2.9. Change in Land Use (from agricultural to non-agricultural use) – Township / rural development or industrial and commercial development. Pre- and post inspections to determine the impact on agriculture and food security.

3. PURPOSE AND OBJECTIVE OF THE PROJECT

- 3.1. For a successful UAS Operators Certificate (UASOC) application, the Department must have at least one UAS (drone) acquired before commencing with the UASOC application. These UASs can then, in the meantime, be utilised under the UASOC of the Service provider making the application on behalf of the Department.
- 3.2. The certified RPL/RPC staff of the department can then utilise the above UASs for the department, but must have a transceiver air band radio to communicate as stated in bullet 1.2 above.
- 3.3. The Drone Technology will enable the Department to provide specialised aerial imagery on demand. These, amongst others, will support risk mapping, post-disaster support, precision agriculture, and extensive land use capturing and land audit capabilities.
- 3.4. Objective
 - 3.4.1. The main objective is to create the capacity in the Department to acquire on-demand high-resolution aerial imagery for specific project requirements like:
 - 3.4.1.1. We enable precision agriculture through multispectral and high-resolution imagery, e.g. field management, detecting crop variability, maximising yields, scouting and inspecting large areas.
 - 3.4.1.2. Reduce inspection times and augment inspections with detailed imagery that provide information that can inform reactive and proactive decisions related to the properties inspected.
 - 3.4.1.3. Possible savings where land acquired are comprehensively inspected with records for later interrogation.
 - 3.4.1.4. Reduced liability where firebreaks are monitored and maintained is currently impossible to inspect with the staff components.
 - 3.4.1.5. Enable the Department to perform on-demand land use audits or surveys to enable the monitoring of Spatial Planning and Land Use Management. These audits and surveys include supporting cash strapped municipalities to comply with the Act.

4. PROJECT OUTCOMES AND SCOPE

4.1. The purchase of ICASA Approved transceiver air band radios to enable RPL/RPC Certified staff in every province to support DALRRD operational requirements for imagery as listed under bullet 2, Problem Statement.

4.1.1. Project Stakeholders

The RPL/RPC training has two purposes. Firstly, to provide staff that is certified with Remote Pilot Licences to fly both multirotor and fixed-wing drones, including “beyond visual line of sight” rating, as part of this training a restricted radio licence is also obtained for communication.

Secondly, to ensure there are adequate staff members to support all Branches that require precision imagery and elevation data, with post-flight capabilities to include the following:

- Precision geo-rectified ad-hoc imagery on demand (Farm acquisition, Land Claims, Alien invasive determination, disaster mapping and risk mapping)
- DEM and or 3D information
- Multispectral imagery with interpretation
- Infrared spectral imagery with interpretation

4.1.2. Project Proposed Solution

Ensure the transceiver air band radios as specified in Annexure A for each certified RPL/RPC staff, to support the Department in all provinces with the identified services.

4.1.3. Benefit and Value Analysis
