- 6.9 Companies associated with the person/s guilty of misconduct (i.e. entities owned, controlled or managed by such persons), any companies subsequently formed by the person(s) guilty of the misconduct and/or an existing company where such person(s) acquires a controlling stake may be considered for blacklisting. C3.1 Service Information

1 DESCRIPTION OF THE SERVICE

1.1 Executive Overview

The firefighting system situated at the Tanker basin area in the Port of Cape Town is a fully automatic firefighting system that assist the firefighters to fight a fire at tanker berths. The system consists of a fully automatic pumped water supply which maintains the system at the required pressure and delivers the required flow to the firefighting equipment when needed. The pump uses seawater as the medium and the system consists of mild steel piping material for water transfers from the suction point to the delivery point. The pipe system which transfers seawater is about 2700 metres both pipelines combined (Red and Blue piping) from the booster pump station to the delivery point, eastern mole 2 (EM2).

Figure.1 Overview of the Tanker basin plant

1.2 Employers Objective

The work that the contractor is to perform covers a once-off corrosion coating of the firefighting system pipes at the Port of Cape Town. The pipe system is made up of different diameters, lengths, and shapes, which require corrosion coating that meets Transnet's specifications.

The Employer's current objectives are to:

- a) Ensure optimal protection and longevity of the pipe system.
- b) Ensure optimum availability of the firefighting system pipeline through the application of the required corrosion protection coating.
