DEPARTMENT OF AGRICULTURE AND RURAL DEVELOPMENT

TERMS OF REFERENCE

FOR

**TERMS OF REFERENCE FOR THE FLY OVER SURVEY AND MAPPING OF
AGRICULTURAL COMMODITY PRODUCTION AND INFRASTRUCTURE IN THE
LIMPOPO PROVINCE FOR THE PERIOD OF 12 MONTHS**

1. PURPOSE

To appoint a Professional Service Provider for the aerial survey and Mapping of Agricultural Commodity Production and Infrastructure in the Limpopo Province for the Limpopo Department of Agriculture and Rural Development (LDARD) for a period of 12 Months.

2. BACKGROUND

As part of its core mandate, LDARD is responsible for delivering timely, reliable, and relevant agricultural information to stakeholders to support informed decision-making and ensure the sustainability and competitiveness of the agricultural sector. The successful execution of this mandate depends on high-quality spatial data, which can only be obtained through a comprehensive, up-to-date aerial survey and mapping process. The aerial survey is one of LDARD's flagship projects, used to provide up-to-date statistical data on agricultural production activities and the infrastructural footprint, and to monitor agricultural land-use changes.

The first survey or mapping exercise (supplemented by interviews with farmers) was conducted in 2011 to establish a baseline for both winter and summer crops. The data collected during that period provided a valuable baseline of agricultural production activities and was instrumental in supporting the planning needs of both the Department and sector stakeholders, including farmers. To ensure planning and resource allocation remain relevant and accurate, an updated aerial survey must be undertaken. This initiative captures both spatial and non-spatial data, offering an updated view of the total surface area under agricultural production, estimated yields (crop and animal production), and evolving production patterns across the province.

3. OBJECTIVES

The objective of these Terms of Reference is to appoint a suitably qualified service provider to design and implement a comprehensive aerial and field-based survey to develop an accurate, current, and georeferenced dataset of agricultural crop and animal production activities and associated infrastructure across Limpopo Province. The service provider will be required to establish an integrated GIS-enabled database that serves as a credible spatial evidence base to support departmental planning, budgeting, and resource allocation processes. The dataset must enable commodity-specific

analysis, monitoring of land-use and productivity trends, and identification of priority investment areas. Furthermore, the outputs shall inform infrastructure and service delivery planning, support climate resilience and risk management initiatives, and strengthen evidence-based decision-making in line with provincial and national agricultural development priorities.

4. SCOPE OF WORK

To achieve this objective, the appointed Service Provider will be required to implement the following integrated scope of work:

4.1 Agricultural Production Mapping and Survey

- Update the baseline data captured during the 2011/12 survey for both winter and summer seasons.
- Identify, locate, and map all cultivated agricultural fields in Limpopo Province, including:
 - Horticultural, agronomic, industrial, and subtropical crops.
 - Crops produced under hydroponics, shade nets, and greenhouses.
 - Temporary and permanent irrigation systems, including centre pivots.
- Compare updated data with the 2011/12 baseline to determine production trends, spatial shifts, and changes in commodity focus.
- Define and map field boundaries for winter and summer crops separately, acknowledging seasonal boundary changes.
- Field boundaries indicating current land uses.
- Capture insights from engagements with farmers, agribusinesses, and sector stakeholders on emerging commodities, production challenges, and opportunities at the district and local municipality levels.
- Distinguish between active, fallow (resting), and abandoned fields.
- Identify, locate, and geo-reference all Animal production systems across the province, including:
 - Dairy, beef, feedlots, poultry, pigs, aquaculture, and game–animal interface systems, etc.
 - Communal grazing areas and related infrastructure.

4.2 Agricultural Infrastructure and Value Chain Mapping

- Update and map all existing agro-processing infrastructure, fully attribute with infrastructure type and business name (where applicable), and integrate into the LDARD GIS system.
- Map and geo-reference on-farm agricultural infrastructure, including:
 - Agricultural marketing and logistic infrastructure (agro-processing and Abattoirs, pack houses, animal handling facilities, grain silos and millers).
 - Input suppliers, service centres and their functional service areas. Input suppliers include Nurseries, Hatcheries, Seed Companies, Input-supplying companies (corporations or well-established companies), and Agro dealers (small input suppliers).

4.3 Irrigation Scheme

- Mapping of all active and inactive irrigation schemes in Limpopo Province.

4.4 Agricultural Strategic Analysis and Business Reporting,

- Produce a comprehensive agricultural sector report and strategic agricultural analysis, including:
 - Area planted, production estimates, quantities marketed, and rand values per commodity;
 - Commodity value chain profiles and local municipal level production analysis;
 - Business development and sustainability considerations. Prepare GIS-based analytical maps and management-ready presentation material.

5. KEY DELIVERABLES OF THE PROJECT

5.1. Deliverable 1: Mapping of crops, animal production and agricultural infrastructure.

It will be expected of the service provider:

- 5.1.1 To develop a “crop calendar” for all (cropping) commodities in the Limpopo Province to ensure that the survey captures crops at the optimum time for identification
- 5.1.2 To conduct an aerial field survey and geo-reference all the field boundaries where there are cultivated crops and animal production. All

- the summer and winter crops should be mapped, time-tagged and classified.
- 5.1.3 To conduct an aerial field survey and georeference all areas where there is livestock production.
 - 5.1.4 To map and classify all agricultural infrastructures for intensive farming systems such as greenhouse tunnels, hydroponics, bee hives, netting and other agro-infrastructure.
 - 5.1.5 To identify and map all agricultural markets and logistic infrastructure, such as grain silos, animal handling facilities, packhouses and agro-processing facilities.
 - 5.1.6 To identify and classify key commodity production hubs as agricultural development zones based on production concentration and output
 - 5.1.7 Provide observation flight plans with dates in GIS formats, including GPS points.
 - 5.1.8 To meet with Organised Agriculture Structures as soon as regional observation flight schedules can be planned, for them to inform their members timeously.

Outputs

- a) A Geo-database of all the cultivated field boundaries (both active and inactive), attributed with the crop or animal production at the time of survey (or noted as e.g. fallow). The database should be structured as per the 2026/2027 survey, with some small improvements as discussed previously in this document.
- b) Ensure compliance with approved spatial data standards and metadata requirements.
- c) All spatial outputs must be certified by a South Africa Geomatics Council (SAGC)-registered Professional GISc within the Service Provider's team.
- d) Harmonise datasets across survey iterations to ensure full comparability despite technological or methodological advancements.
- e) Provide all source imagery and background data sets used during the project to LDARD on a high-speed external SSD.

5.2 Deliverable 2: Value of Agriculture commodity production in Limpopo

The value of agricultural commodity production should be reported in the following spreadsheet format:

- 5.2.1 Area planted per commodity per district and local municipality
- 5.2.2 Weighted average output (tons) for the region
- 5.2.3 Potential Rand Value and Export value (Rand /ton) based on prevailing market prices at the time of the survey.
- 5.2.4 Determination of average farm size for key commodities
- 5.2.5 Determine the potential of unused land based on crop suitability of the specific area
- 5.2.6 Intelligence gathering from agribusinesses and local experts on a regional basis regarding agricultural trends and average yields.

Outputs

- a) A detailed agricultural production report which includes updated area planted per commodity, outputs, rand value and quantity marketed (Local Market, Export Market and Processing).
- b) Intelligence gathered and reported per district and local municipality, or production region spanning district and local municipalities, pertaining to any changing land use trends, new commodities and any production issues influencing agricultural land use and infrastructure, inclusive of crop or livestock production.
- c) This should guide LDARD in responses and strategic planning on a local basis and contribute to an envisaged agricultural sector plan.

5.3 Deliverable 3: Agricultural Infrastructure and Facilities

- 5.3.1 Spatially attribute agricultural marketing and logistics infrastructure, including but not limited to agro-processing facilities, abattoirs, packhouses, animal handling facilities, and milling facilities
- 5.3.2 Map and geo-reference all existing on-farm agricultural infrastructure across the province.
- 5.3.3 Map and geo-reference agricultural input suppliers and service centers, including their respective functional service areas. Capture and classify input supply infrastructure, including nurseries, hatcheries, seed companies, established input suppliers, and agro-dealers/small-scale input suppliers.
- 5.3.4 Provide a fully attributed spatial database of all identified infrastructure, including infrastructure type, location coordinates, operational status, and associated business/facility names where applicable.
- 5.3.5 To map all active and inactive irrigation schemes in Limpopo Province.

Outputs

- a) All agro-processing facilities that were mapped in deliverable 5.3 are to be annotated in terms of their processes/products/outputs.

- b) The location and type of all existing agricultural infrastructure, database and shape files/geodatabase of agricultural land use change (from baseline data to 2026), inclusive of changes from virgin veld to crop or livestock production.
- c) A geo-referenced spatial database and map layer of all active and inactive irrigation schemes in Limpopo Province, indicating cultivated areas, commodity or crop type where applicable.
- d) Confirm that the previous infrastructure still exists and operates as reported.

5.4 Deliverable 4: Agricultural strategic analysis & business reporting:

- 5.4.1 The Service Provider is expected to conduct a detailed strategic information analysis of the products developed, as described in the requirements for deliverables 5.1 and 5.2.
- 5.4.2 The strategic analysis must contribute to a detailed Agricultural Business Development Plan that will describe the current agriculture businesses and processes of the area, compliance issues, as well as economic contributions against the impact on the environment and reference to sustainability. This, in turn, will contribute to the proposed provincial agricultural sector plan.
- 5.4.3 This will provide strategic information on where and what changes are occurring, and on the responses/interventions that need to be facilitated by LDARD management and their respective teams.
- 5.4.4 The Agricultural Business Development Plan must be a GIS based report with strategic presentation of data analysis and reporting.

Outputs

- a) The datasets from the two survey iterations must be standardised and harmonised to enable consistent comparison across time within Limpopo Province's agricultural commodity mapping programme.
- b) This includes aligning variations in methodologies, classifications, and workflows, particularly regarding changes in definitions (e.g. old lands), and the classification of horticultural, agronomic, industrial, subtropical crops and mixed cropping systems. All datasets must be integrated into a single geospatial database to support time-series analysis of commodity distribution and trends at regional level.
- c) Develop and design a strategic interpretation report framework tailored to effectively communicate spatial and commodity-specific insights derived from the Limpopo agricultural mapping outputs.
- d) Undertake detailed data analysis and produce summarised outputs at district and local municipality level, reflecting commodity distribution, extent, and changes over time.
- e) Compile a comprehensive project methodology report, with the option to classify specific technical components as the Service Provider's intellectual property, to be documented separately from the main report.
- f) Conduct an evaluation and comparative analysis to assess alignment between the mapped agricultural commodity data and other authoritative datasets (e.g. Department of Agriculture (DoA), Statistics SA, Commodity-Based & Industry Groups: Citrus Growers, Grain SA etc), within the Limpopo context.
- g) Undertake agricultural business interpretation analysis, linking spatial commodity data to agri-business activities, value chains, and production

- systems within the province
- h) Conduct agricultural economic development analysis, assessing the contribution and potential of mapped commodities to local and provincial economic growth
- i) Summary of data processed into data tables and spatial components (both GIS-based and Excel data tables), formatted for use in the Department's GIS System, and by economists.

6. METHODOLOGY TO BE APPLIED

- 6.1 The mapping should be conducted through aerial surveys complemented by field surveys in the agricultural areas in Limpopo. Professional Service Providers (PSP's) will be expected to submit a detailed project methodology and implementation plan for approval by LDARD.
- 6.2 This update will require an increased reliance on remote sensing (RS) to distinguish annual winter crops (Cabbage, Spinach, Lettuce, Carrots, Beetroot, etc.). Latest Sentinel 2 and LANDSAT 8 satellite imagery is regarded as the *de facto* source of data for this part of the investigation.
- 6.3 Undertake winter and summer aerial surveys using light aircraft and/or helicopters, flown at altitudes sufficient to accurately identify crops, livestock systems, and infrastructure.
- 6.4 Deploy qualified agricultural observers supported by a commercial pilot and specialised onboard GIS-based data capture systems.
- 6.5 Conduct field-based and vehicle-based surveys to verify airborne observations and to cover areas where flying is restricted or impractical.
Where direct access is not possible (e.g., no-fly zones), apply local knowledge and record such data with appropriate confidence scores.

7. SPECIFIC REQUIREMENTS

- 7.1 The Service Provider must submit all reports, including minutes of meetings held, to both the Project Manager and the project steering committee at (LDARD). Progress reports must be submitted on a monthly basis. All reports must be signed and in MS Word format.
- 7.2 Before commencement, a meeting will be held with the project technical management team, consisting of the GIS technical team, to refine the database structure requirements and usage of the Surveyor General 's cadastral data. A follow-up technical meeting will be undertaken once the draft products of both the summer and winter missions are available to ensure the final product meets the requirements.
- 7.3 All the spatial data should conform to Limpopo Provincial Government and LDARD GIS data standards; be in a state such that it can be easily imported into the Department's Geodatabase (Environmental Systems Research Institute (ESRI) ArcGIS/ArcGISPro) system.
- 7.4 The data collected by the Service Provider should conform to SASQAF (South African Statistical Quality Assessment Framework) operational standards and guidelines
- 7.5 And any further requirements as specified by the National Spatial Infrastructure Framework (NSIF).
- 7.6 Facilitate bi-monthly progress meetings with the LDARD Steering Committee.
- 7.7 Support departmental capacity building through knowledge transfer and participation of LDARD officials, as requested.
- 7.8 Must ensure full compliance with the Protection of Personal Information Act

(POPIA).

7.9 The Service Provider shall, upon request from the Project Manager, facilitate the involvement and participation of departmental officials for capacity building purposes, including their inclusion in activities such as aerial survey flight missions.

7.10 Provide approved observation flight plans by the South African Civil Aviation Authority (SACAA) prior to flight missions.
