Lethabo Power Station is a power generating utility. The power station activities create interaction with the environment due to raw materials used in the power generation process, which by nature impacts on water, land and air. Lethabo will strive to manage our aspects on the environment related to our activities, products and services as defined in our environmental management system. Lethabo Power Station commits to the following:

- The Eskom SHEQ policy 32-727 which the Lethabo Power Station Environmental Statement of Commitment (PS010) is derived from.
- Complying with South African environmental legislation, regulations, Eskom policies, procedures; standards and compliance obligations relevant to our aspects.
- Protection of the environment including pollution prevention.
- Continual improvement of the environmental management system within the scope of the organization to enhance environmental performance.
- Maintaining an Environmental Management System in accordance with the requirements of ISO 14001
- Communication of the statement of commitment within the organization.
- Making this statement of commitment available to interested parties on request.
- Setting Objectives and targets to ensure natural resources are utilised efficiently by minimising the intake of raw water, managing water in accordance with the ZLED policy, lower emissions, improved waste management practices and responsible land and biodiversity management.

Through the active participation of Lethabo employees and contractors, who are collectively responsible for the business unit's performance, we will incorporate environmental management in accordance with the ISO 14001 standards into the overall business strategy of our Power Station. Each person must ensure that his/her actions minimize the impact upon the environment and should call upon Lethabo's Environmental Section for advice and assistance.
