3.2 PROJECT SPECIFICATION

3.2.1 DESCRIPTION OF THE PROJECT

The Department of Water and Sanitation's Construction South Division has been appointed to undertake the raising of the Clanwilliam Dam.

The raised dam wall will be approximately 370 m in length and 49 m in maximum height. At full supply level the reservoir will cover a surface area of approximately 2 022 ha and capacity of 344,3 million cubic metre

The works include addition of concrete on the downstream side, extending the apron, construction of a free-standing intake tower, river outlet control house, a power generating house, short tunnel and coffer dam works on the upstream side, as well as various other pipe outlet structures on the downstream side. This work must be done without interfering with the day-to-day operation of the dam.

In order to facilitate the release of water while working on the downstream side of the dam wall a temporary bypass line will be constructed.

This tender is to do corrosion protection of parts of the temporary bypass pipe.

3.2.2 LOCATION AND ACCESS TO SITE

The dam site is situated on the Olifants River, in the Western Cape, approximately 2 km South- West of Clanwilliam town in the Western Cape Province.

The site is immediately next to the N7 and accessed through a controlled gate. The gravel site roads will be regularly maintained but could get challenging under abnormal rainfall conditions.

Directions to Site:

- From Cape Town International Airport: Take N2 freeway towards Cape Town
- Take exit 14 for M7/ Vanguard Drive
- Turn right onto Vanguard Dr
- Continue onto N7 for about 230 km
- The dam will be on the right about 2 km south of the town of Clanwilliam Dam in the Olifants River

Item	SHORT DESCRIPTION	Specification / Requirements	Do the items priced in the pricing schedule comply with the indicated specification/requirement?	
			Comply	Not Comply
1	Corrosion protection Internal and External	With reference to Annexure A, The items to be coated will be indicated to the contractor on award as the broader project requires them. Items are currently being manufactured and will be new steel. Mechanical preparation (fettling, cleaning of weld spatter, rounding of edges, etc) of the items will be done by the client and the contractor should not allow for any mechanical preparation. The information in this specification should be sufficient for the contractor to prepare a rate per square meter and price it accordingly in the pricing schedule of this bid. The contractor will be paid per square meter of completed coating and lining. The contractor will prepare a corrosion protection quality control plan for items 1.1 and 1.2 respectively for the approval by the client on award of this bid that is in accordance to this specification and the data sheet for the prosed materials. Actions and specifications for the Contractor: SPECIFICATION: Surface preparation: Degreasing: All surfaces to be coated shall be tested for oil and grease contamination by the water break free test or ultra-violet light. Oil and grease contamination shall be removed by one or more of the following: • Steam-cleaning. • An emulsifiable or aqueous detergent applied in accordance with SANS 1344.		

		• An alkaline cleaning solution. WATER SOLUBLE SALTS LIMITS The blast cleaned surfaces to be coated shall be tested for water soluble salts. The maximum level of salts allowable on the surfaces shall not exceed the values given below. Should these values be exceeded, the surfaces shall be cleaned by: - (a) A liquid soluble salt remover approved by the Coating Manufacturer or (b) Washing with a high-pressure jet of clean potable water or (c) Water injected blast-cleaning and (d) Re-blast or flash blast-cleaning FINAL-BLAST HUMIDITY AND TEMPERATURE Final-blasting and corrosion protection shall not be carried out if the steel temperature is less than 3°C above dew point. For new steel in a workshop or fabrication facility, all blast-cleaned surfaces shall be coated within four (4) hours when relative humidity is below 70% or two (2) hours when relative humidity is between 70% and 85%. At the discretion of the client in the event that the relative humidity is consistently between 80% and 90% blast-cleaning may only take place if the steel is at least 5°C above the condensation temperature (dew point) of the air and if the steel is coated within one hour after blasting, provided that the paint or coating systems that are used under conditions of high humidity are not moisture sensitive. Any dispute relating to cleanliness of blasted steel that has aged shall be settled by blasting test patches to ensure that there is no colour variation between the old blasted steel and the freshly blasted steel.
