1. BACKGROUND INFORMATION

2.1 Status quo

The Gauteng Region is currently embarking on a large-scale rebuilding of the OHTE, the focus has been on the main lines. Some of the major maintenance works are beyond the capability of the existing teams due to:

- ❖ the teams are not equipped to work on the 44kV transmission line. The training of the OHTE teams did not include working on 44kV transmission lines
- ❖ complexity of rearranging OHTE wires to cater for cross overs

2.2 Problem statement

The region is looking to increase the number of train sets and therefore needs more flexibility in the running lines (crossovers), loops at stations as well as the yards. This is therefore the reason why Electrical Department is looking to procure the contractor to do major maintenance of 3kV OHTE and transmission lines on as and when required basis.

The aim is to procure a contractor that will be available as and when the business has identified a need to reinstate a certain section of the OHTE. The following are the components of the OHTE that will be supplied and installed:

- 2.2.1 Contact Wire – used to provide power to the locomotives by making contact with the (moving) pantograph, the pantograph exerts pressure on this wire thereby maintaining constant contact.
- 2.2.2 Catenary Wire – used to suspend the contact wire using droppers.
- 2.2.3 Feeder Wire – this wire carries the bulk of the electric current (over long distances) that eventually gets supplied to the locomotives.
- 2.2.4 Masts – these are steel structures which suspend the OHTE.
- 2.2.5 Foundations – concrete structures on which masts are planted.

Figure 1: OHTE Layout

There are other smaller components such as steady arms, hockey sticks, track switches, section insulators, droppers, and insulators, Feeder Catenary Contact jumpers which make the OHTE whole and functional.

In addition, there are 44kV, 11kV and 6.6kV transmission line networks which supplies the distribution network. This includes signalling equipment, buildings, and platform lighting.

As can be seen from the above most of the components are made of metal (copper, steel and aluminium). The contact wire normally wears off because of pantograph and contact wire interaction.

2. OBJECTIVES OF THE PROPOSED PROJECT

3.1 Desired outcomes for carrying out proposed project

- ❖ The project aims to reinstate the flexibility and the capacity of the network as and when the business requires. The project will assist in the building of crossovers, loops and yard lines.

3.2 Project benefits to PRASA

- ❖ When a need has been identified by the operators to reinstate additional capacity, the turnaround time will be reduced to a minimum as there will be an appointed contractor that will be ready to supply and deliver material, install as well as test and commission the new equipment.
- ❖ In case of a large-scale failure that cannot be executed by inhouse teams, the contractor will be called in to reinstate the network in the shortest possible time.

3.3 Current Mechanism in place to address the problem

The inhouse maintenance teams are currently being used as and when faults occur, however when a large-scale section is affected, an external service provider who is better equipped is always procured.

3. SCOPE OF WORK AND AREA OF FOCUS

4.1 Scope of the desired solution

Major maintenance of:

- 4.1.1 OHTE (3kV DC), 11kV, 6.6kV and 44kV networks.

- 4.1.4 Insulators

4.1.5 Small Part Steel Components and all other components required for the full functionality of the OHTE system on as and when required basis.

Where a Bidder at any stage during the RFP Process indicates to PRASA that information or any response to RFP requested from PRASA is or should be treated confidentially, PRASA shall treat such information or response to RFP confidentially, unless PRASA believes that to ensure the transparency and competitiveness of the RFP Process the content of the information or response to RFP should be conveyed to all Bidders, in which event it shall apply the following process:

- PRASA shall confirm with the Bidder whether the raising of confidentiality applies to the entire response to the RFP or only specific elements or sections of the response.
- Where confidentiality is maintained by the Bidder and PRASA is of the opinion that the information or response to RFP if made publicly available would affect the commercial interests of the Bidder or is commercially sensitive information, PRASA shall not release such information to other Bidders if providing such information or response to the RFP would prejudice the competitiveness and transparency of the RFP Process.

- Where PRASA is of the opinion that information provided is not commercially sensitive or would have no impact on the commercial interests of the relevant Bidder if released and fairness and transparency require that such information be released to all Bidders, PRASA may:
 - i. inform the relevant Bidder of the necessity to release such information and/or response to RFP and request the Bidder to consent to the release thereof by PRASA; or
 - ii. obtain legal advice regarding the confidentiality of the relevant information and/or response to RFP and the legal ability of PRASA to release such information; or
 - iii. refrain from releasing the information and/or response to RFP, in which event PRASA shall not take account of the contents of such information in the evaluation of the relevant response to RFP.
