1. PROJECT BACKGROUND AND OBJECTIVES

1a. EXECUTIVE SUMMARY

Legacy system and manual processes continue to render Gauteng Provincial Government (GPG) Human Capital administration processes vulnerable to human errors and manipulation of data due to lack of validations in the system. Manual processes are difficult to monitor, expensive and delays service delivery processes.

GPT would like to appoint a service provider to develop a robust system which will assist GPG to validate demographic information; qualifications; criminal record; professional affiliation for HR, while accessing credit bureau and medical aid data as a start. Results obtained will be stored centrally and used by GPG and Municipalities to support decision making process and good governance.

The appointed service provider must develop a Biometric Authentication and Data Gathering System is system required GPT to verify identity of GPG employees, both South Africans and Foreign Nationals. GPT requires the system to access more data bases to perform various checks which will assist the recruitment and service delivery processes.

1b. OBJECTIVES OF THE PROJECT

Through a biometric driven system, the province aims to respond to the following needs.

1.1 Verification of Demographic information

In compliance with various legislation and good practice, employers must have accurate employee demographic information. Relevant legislations are; in terms of Income Tax act 1962 s67(1) (1A) and Basic Conditions of Employment act s29(1)(b), and FICA to name just a few. Consent to access personal information will be granted by each subject prior verification process in line with POPIA.

1.2 Validate Qualifications and affiliation to professional body checks

Delays in filling vacant positions within GPG can be attributed to the process of vetting and qualification verification through third party agencies. As costly as the process is, GPG cannot develop its own database for future reference checks as such dependent on these agencies, since information is attained from various sources, results are not stored centrally for easy access.

The opportunity to add value to information obtained is lost since GPG does not electronically store results obtained and consume for compliance only.

Verification of professional bodies is done manually and is open for manipulation.

1.3 Verification of Business Interest

The Auditor General of South Africa (AGSA) issued a report to Parliament in January 2006 which indicated that designated employees (senior managers) failed to declare their business interest and that majority of government officials did not have approval to perform remunerative work outside government, as prescribed by the relevant legislation and regulations. Government across all spheres continue to struggle in preventing employees doing business with the state.

 GAUTENG PROVINCE PROVINCIAL TREASURY REPUBLIC OF SOUTH AFRICA	PROVINCIAL SUPPLY CHAIN MANAGEMENT	
	TERMS OF REFERENCE DEVELOPMENT OF BIOMETRIC AUTHENTICATION & DATA GATHERING SYSTEM INCLUDING SUPPORT AND MAINTENANCE FOR PERIOD OF 3 YEARS	Page: 4 of 21

1.4 Criminal Record Checks

A probe by the Public Service Commission (PSC) has found that 223 public servants, employed full-time, have criminal records for offences ranging from fraud and corruption.

PSC, said that vetting process was not meant to stop employment of people with criminal records, but to "to assess the potential impact this may have on the job and organisation.

The PSC report brings to light the necessity for government to close the loopholes or administrative bungles which lead to applicants with criminal records coming into sensitive departments within Government.

1.5 Economic Classification

Programmes of government aimed at alleviating poverty are undermined by ineffective decision-making tools available to administration personnel.

- The process of planning and allocation of houses is compromised due to inability to establish whether a prospective beneficiary is employed or not, and what economic level is that beneficiary. Answers to these criterion questions informs the placement category of beneficiaries;
- The decision to place a child into a paying or non-paying school is based on untested information received from the parent.
- In supporting citizens with agricultural utensils lack of systems which support decision making process has exposed department to fraud and data manipulation.

NOTE: Bidder shall ensure that the development of the required system will be in line with the requirements of this terms of reference.

2. CUSTOMER AND STAKEHOLDERS

3. SCOPE OF WORK

The selected bidder shall develop a solution according to the Terms of Reference, provide maintenance and support for the duration of the contract.

3.1 SYSTEM DEVELOPMENT REQUIREMENTS

GPT aims to leverage on the information held by different government entities and private sector agencies to improve screening of service beneficiaries and prospective employees to improve the recruitment process. Therefore, the bidder must develop a system which can query the specific information holders and store results within GPG server in real time.

The key aspect of the system is to capture all fingerprints and identity number, utilise the GPT approved IP to query DHA specified databases and return results in real time. Once identity has been verified, then utilise GPT agreements to validate and gather information in specified data bases which are held by both private and public sector.

Through this system, GPG will obtain consent from the subject (person being verified) then query and store results thereby reducing the number of times it queries external information holders. GPG will use the information for the purpose it acquired it for, in compliance with POPIA. Proposed system must be able to access:

3.2 SYSTEM OPERATION REQUIREMENTS

Bidder/s are invited to develop a web-based biometric driven authentication and data gathering system will **query; transport; receive** and **store** results onto a **GPG database in real time**. Through a webservice, this system should be able to query and transport data from various information holding institution in real-time.

The required Biometric Authentication System should easily be integrated into various systems used by line departments and municipalities in carrying out their normal business.

The Biometric Authentication System will have the following functionalities which will assist GPG recruitment and customer classification requirements.

Each functionality will be linked to specific source of information and data will be store in predefined formats and tables. For example, Human Resources (HR) will use a function to validate identity against Department of Home Affairs.

Therefore, development work to link Biometric Authentication and Data Gathering System to various information holders and logic for interpretation of results and archiving. The system will have functional based tabs namely, **HR; Patient Admin; Indigent Support Services and other**. The system will be used by departments and municipalities with roles assigned to each business while Gauteng Treasury controls data and system access. Data will be fully owned by Government.

Access and data will be controlled centrally by GPT as currently done on all systems, assisted by Department e-Government to ensure compliancy to GPG data security and control policies. Data will be stored at SITA to ensure it is subjected to strict data control like Persal data and all other government information.

- Create user access and Authenticate credentials when system is accessed by user.
- Build in pre-verification form onto the system which must enable provide the verification subject to give consent for personal data access.
- Pre-validating of Identity number on the landing page through a built-in algorithm before submitting query to DHA
 - **Validate South African ID numbers** by calculating the digit (digit-13), extracts the date-of-birth, gender and citizenship just on the landing page before transmitting information to Department of Home Affairs.
- Validate passport numbers for foreign nationals
- Capture all ten fingerprints
- Transmit data to DHA for Validating identity number and fingerprints against National Population Register
- Display results on screen.
- Save results into GPG database.
