22. TERMS OF REFERENCE

The purpose of this tender is to invite suitably qualified service providers to submit proposals for the supply and installation of LAN network and Wireless Infrastructure with maintenance and support for three (3) years. The services are required at Mintek's premises located at number 200 Malibongwe Drive, Strydom Park, Randburg.

BACKGROUND & CONTEXT

Mintek has identified a need to upgrade the current network infrastructure, which has reached its end-of-life and is out of OEM support. The capacity of the current network is insufficient for the network demand. The strategic direction of upgrading the ICT infrastructure is deemed critical in providing an enabling infrastructure for Mintek. It also contributes to Mintek's strategic goal of developing and maintaining a world-class RDI infrastructure. It is envisioned that the network upgrade will improve the network reliability, improve network performance, use of more devices in the enablement of the Internet of Things, Artificial Intelligence (AI) and better security.

The network infrastructure upgrade is required to be deployed in phases in order to maintain maximum business continuity except for scheduled downtime. The selected supplier is expected to provide the network hardware, software, licensing, installation, configuration, testing, integration services, training, monitoring, and maintenance of the network infrastructure.

23. SCOPE OF WORK

23.1 Supply, install, configure and maintain the LAN and Wi-Fi Infrastructure as per Bill of Material (Annexure A) including:

- Upgrade the Core Switches and its modules.
- Supply, install and maintain the Distribution Access 24 and 48 Port Switches.
- A Cloud-Based Network Management – a network with a secured Policy-Based Automated Solution and Software-Defined Network (SDN).
- Supply, installation and configuration of secondary data line for high availability.
- Supply all the licenses for all the required network equipment.
- Upgrade the LAN infrastructure across all the Mintek buildings.
- Wi-Fi 6 infrastructure across the Mintek Campus (Indoor and Outdoor) – Access points and

controllers.

- Maintenance and Support of the new network infrastructure for three (3) years.
- Provide the network configuration and design documentation.
- Design the architecture for the new network infrastructure.
- Phase out the old network infrastructure.
- Use the existing firewalls hardware for securing the new network infrastructure.
- A network infrastructure that supports Internet of Things (IoT) and network orchestration
- Develop and implement the skills transfer and training of Mintek officials within the ICT division.
- Integrate the LAN and the Wireless infrastructure with the SDN access components and Security Policy Management Server.
- Project manage the installation of the network infrastructure.

23.2 PRODUCT REQUIREMENT

23.2.1 LAN INFRASTRUCTURE

Mintek requires the network infrastructure to be upgraded in order to support the bandwidth allocation of 1 Gbps to 10Gbps from the switches depending on the function needs. All switches are to be replaced with suitable and modern technology to support the increasing network business needs. The network upgrade required should unify the wired and wireless infrastructure. The upgraded network should be built based on Software Defined (SD) Access design and concept for network management. Mintek requires a network that supports and enables the technologies such as IoT, Artificial Intelligence, network orchestration, automation, enhanced network analytics, automation, complete network visibility, fast and easy network service enablement to business.

23.2.2 WIFI INFRASTRUCTURE

The objectives of this network upgrade are to fully adopt and rolled out the wireless network across the entire Mintek campus. The sixth generation of the WIFI network (WIFI 6) also known as IEEE 802.11ax, is required to be installed with coverage from inside and outside all the buildings and across the whole Mintek campus. The new wireless infrastructure is required to be integrated with the SD access components and the Security Policy Management Server to manage both wired and wireless infrastructure from a single management platform and also share

Mintek Request for Proposal

the same policies and rules. This solution is required to include intelligent APs and wireless controllers that use Wi-Fi-certified devices for next-generation networks combined with the latest network management and core networking.

23.2.3 SOLUTION ARCHITECTURE

The two-tier enterprise network is required to be used with a single mode fibre. The blocks or components which form a two-tier design include the Core/collapsed and edge layer. The edge layer provides network connectivity to end-user devices, such as personal computers, VoIP phones, printers, and IoT devices as well as connectivity to wireless access point devices. Two core switches are required for the core layer component. The two-tier hierarchical topology will enable high availability or redundancy.
